30498 (PNL-SA—11049, pp 18-28) **Dosimetry of internally deposited radionuclides in lung and its usefulness in predicting biological effects.** Diel, J.H.; Guilmette, R.A.; Hahn, F.F.; Lundgren, D.L.; Mewhinney, J.A.; Muggenburg, B.A.; Snipes, M.B.; Boecker, B.B.; McClellan, R.O. (Inhalation Toxicology Research Inst., Albuquerque, NM). Feb 1983. NTIS, PC A09/MF A01. Contract AC04-76EV01013.

From 30. annual meeting of the Radiation Research Society; Salt Lake City, UT, USA (18 Apr 1982).

Dosimetry of inhaled radionuclides deposited in lung is being studied to improve our understanding of the macroscopic and microscopic distributions of radiation dose. The spatial distribution of dose in lung and its effect was studied using monodisperse aerosols and radionuclides of different specific activities. The study of the influence of temporal distribution of dose used radionuclides with different physical half-lives. Movement of particles in the lung, the clearance of materials from the lung and the resulting changes in dose to the lung were studied using autoradiography. Resulting patterns of dose and radionuclide distribution in the lung were described statistically. On the basis of the results, we conclude that dosimetry of internally deposited radionuclides in the lung, to be useful, must include study of the spatial distribution, temporal distribution and radiation type.

30499 (PNL-SA—11049, pp 29-36) **Search of the relevant lung dose.** Fisher, D.R. (Pacific Northwest Lab., Richland, WA). Feb 1983. NTIS, PC A09/MF A01.

From 30. annual meeting of the Radiation Research Society; Salt Lake City, UT, USA (18 Apr 1982).

Researchers have traditionally been inconsistent in their methods of determining and reporting dose to the lung form inhaled radionuclides-a situation which has led to difficulties in later comparing results and deriving dose-response relationships. The dose quantities which at present are most generally assumed to be related to risk of stochastic radiation effects (such as lung cancer) are (1) mean dose equivalent to the bronchial epithelium basal cell layer for radon daughters, and (2) mean dose equivalent to the whole lung (including tracheobronchial lymph nodes) for all other radionuclides. The average radiation dose is calculated by assuming that the energy is homogeneously imparted to the entire tissue mass. However, the actual dose received by a cell which becomes transformed or tumorigenic is likely to be very much different than the smear dose to the entire organ. This realization has led to further study of stochastic energy deposition processes in single cells or cell nuclei from internal emitters. The end product of the stochastic approach to dosimetry, sometimes called microdosimetry, is a probability density in specific energy. For alpha-emitting radionuclides in the lung, a concept that may be more important than dose is the probability that a cell is hit by an alpha particle.

30500 (PNL-SA—11049, pp 37-43) **Dosimetric concepts for inhaled radon decay products in the human lung.** Hofmann, W. (Univ. of Salzburg, Austria). Feb 1983. NTIS, PC A09/MF A01.

From 30. annual meeting of the Radiation Research Society; Salt Lake City, UT, USA (18 Apr 1982).

The primary objective of lung dosimetry is to provide a physical basis in terms of radiation doses for establishing the relationship between airborne radon decay products and lung cancer induction as the most important biological endpoint. In order to accomplish this goal, several dosimetric approaches have been developed which are based on reasonable approximations of the anatomical structure of the respiratory tract, of clearance mechanisms for particles deposited, and of energy deposition at the cellular level. Usually lung cancer risk is correlated with the mean radiation dose to the stem cells in the bronchial epithelium. A different approach is presented here through the application of stochastic models which allow for the biological variability inherent in all anatomical and physiological parameters. Thus, the specific energy distribution in cells or cell nuclei and the number of sensitive targets hit are more appropriate quantities for the interpretation of lung cancer incidence. The relevance of dosimetric approaches at the cellular level is, however, intimately connected with models describing the transformation towards malignancy, and further improvements of lung dosimetry can only be achieved by a more profound insight into the basic biological mechanisms involved in radiation-induced carcinogenesis.

30501 (PNL-SA—11049, pp 49-58) **Spatial distribution of inhaled particles in rodent lungs.** Hodgson, A.; Bailey, M.R.; Birchall, A.; Murfitt, A.J. (National Radiological Protection Board, Chilton, England). Feb 1983. NTIS, PC A09/MF A01.

From 30. annual meeting of the Radiation Research Society; Salt Lake City, UT, USA (18 Apr 1982).

The spatial distribution of particles in the lungs is being studied to improve understanding of particle clearance mechanisms and to determine the distribution of doses to lung tissues from inhaled radioactive particles. In a pilot experiment 15 rats and 15 hamsters inhaled 1.2 μm diameter monodisperse fused aluminosilicate particles labelled with ^{85}Sr. Total body retention in each animal was followed by external gamma counting, and groups were sacrificed at times up to 200 days for distribution measurements. Particles are located in lung sections by Auger electron autoradiography. Positions of particles, ciliated airways and the lung periphery in each section are obtained using a semi-automatic image analyzer interfaced to a microcomputer on which data analyses are performed. Aggregation coefficients are calculated to assess the significance of the difference between the observed spatial distributions and random distributions. Particle concentrations as functions of distance from airways and the lung periphery will be combined with individual retention curves to assess particle retention in different parts of the pulmonary region. Clearance at different rates from different sites is a possible explanation for the phases observed in the pulmonary retention curves, not only of rodents, but also of man. The spatial and temporal distribution of particles in the lung, combined with the dose distribution around individual particles, will enable dose distributions to specific cell types in the bronchial epithelium and alveoli to be determined.

30502 (PNL-SA—11049, pp 59-65) **Dosimetry and response in rat pulmonary epithelium following inhalation of $^{239}PuO_2$.** Rhoads, K.; Mahaffey, J.A.; Sanders, C.L. (Pacific Northwest Lab., Richland, WA). Feb 1983. NTIS, PC A09/MF A01.

From 30. annual meeting of the Radiation Research Society; Salt Lake City, UT, USA (18 Apr 1982).

The distribution of inhaled $^{239}PuO_2$ and pathologic changes have been studied in the lung of rats. The clearance of inhaled ^{237} $^{239}PuO_2$ from the lung is a function of the amount of deposited Pu with a decrease in early alveolar clearance with increasing lung burden. With increasing time post-exposure there is a greater concentration of PuO_2 and an increased aggregation of PuO_2 particles in subpleural regions of the lung. Fibrotic and metaplastic lesions in the lung were usually focal, being found in subpleural regions associated with aggregates of PuO_2. An average of 12 +- 6 percent of the lung volume was fibrotic at 530 days after an initial alveolar deposition of 180 nCi ^{239}Pu. Lung tumors occupied 4 +- 6 percent and epithelial metaplasias less than 1 percent of the lung volume at this time. Cell proliferation as assayed by tritiated thymidine autoradiography was greater in fibrotic, metaplastic and neoplastic regions than in areas of normal alveolar-bronchiolar epithelium. Turnover times ranged from about 6 days for fibrotic lesions to 1 to 3 days for metaplastic and neoplastic lesions. The lung tumor doubling times were 57 to 116 days due to tumor cell necrosis and other factors that limit tumor cell survival. Cell proliferation rates for adenomatous metaplasia were similar to those for adenocarcinoma while those for squamous cell metaplasia were similar to those for squamous cell carcinoma. Squamous lesions exhibited a more rapid growth than did adenomatous lesions.

30503 (PNL-SA—11049, pp 66-72) **Retention of various types and sizes of particle in the large airways of the rat: implications for assessing the risk of lung cancer.** Patrick, G. (MRC Radiobiology Unit, Harwell, England). Feb 1983. NTIS, PC A09/MF A01.

From 30. annual meeting of the Radiation Research Society; Salt Lake City, UT, USA (18 Apr 1982).

Clearance kinetics and retention in rat trachea have been compared for fused aluminosilicate particles (FAP) of count media diameters 1.1 and 5.7 μm, and for 1.0 μm $BaSO_4$ particles. A 2.5 μl suspension was deposited in the distal trachea of conscious rats. In each case there was an initial fast phase of clearance from the deposition zone, removing 88 percent of 1.1 μm FAP, 73 percent of 5.7 μm FAP, and 82 percent of $BaSO_4$. The remainder was cleared more slowly with half-times of 24 hours, 17 hours, and 15 hours, respectively. Retention in the tracheal wall after 7 days was 0.45 percent, 0.75 percent and 0.83 percent, respectively. The 5.7 μm FAP particles retained after 7 days were shown by autoradiography to be located either in the epithelium of the trachea or beneath the epithelium in the lamina propria. Electron microscopic evidence suggested that the particles were within macrophages. These and previous results demonstrate similar retention in the airways for different kinds and sizes of particle. The particles are retained in or beneath the airway epithelium, mostly within 440 μm of the basal cells. Thus, or inhaled insoluble α-emitters, a small proportion of particles can be retained at sites where they may constitute the greatest risk of inducing bronchogenic lung cancer.

30504 (PNL-SA—11049, pp 73-79) **Retention of relatively insoluble particles inhaled by dogs, rats and mice.** Snipes, M.B. (Inhalation Toxicology Research Inst., Albuquerque, NM). Feb 1983. NTIS, PC A09/MF A01. Contract AC04-76EV01013.

From 30. annual meeting of the Radiation Research Society; Salt Lake City, UT, USA (18 Apr 1982).

Dogs, rats and mice were exposed briefly by inhalation to one of three monodisperse aerosols 0.7 μm, 1.5 or 2.8 μm activity median aerodynamic diameter (AMAD), or a polydisperse aerosol of ^{134}Cs-labeled fused aluminosilicate particles. Tissues and excreta were collected to 850 days after exposure to determine how these differences in particle size would influence the fate of the inhaled particles. Emphasis was placed on the long-term retained burden of particles deposited by inhalation in the respiratory tract. A simulation model was developed for each species and each aerosol. With the exception of the 2.8 μm AMAD aerosol which cleared principally by mechanical processes, solubilization was the dominant lung clearance process in dog. Mechanical clearance was the dominant clearance process for rats and mice for particles with dissolution half-times greater than a few hundred days. While the dissolution rate was influenced by particle size, the mechanical clearance rate for the particles was independent of particle size for all three animal species. Clearance from lung to lung-associated lymph nodes (LALN) occurred at a constant rate of 0.0002 day^{-1} for dogs. Clearance of particles to LALN in rats and mice occurred with a pattern which could be simulated as a process which was significant for only a few days after inhalation exposure. For all three species, the upper respiratory tract tenaciously retained a small portion of the initially deposited particles.

30505 (PNL-SA—11049, pp 80-82) **Long term lung retention after inhalation of cobalt-oxide and cobalt-nitrate aerosols.** Kreyling, W.G.; Ferron, G.A.; Haider, B.; Jacobi, W. (Institut fuer Strahlenschutz, Muenchen-Neuherberg, Germany). Feb 1983. NTIS, PC A09/MF A01.

From 30. annual meeting of the Radiation Research Society; Salt Lake City, UT, USA (18 Apr 1982).

After a single inhalation of the aerosol the long-term lung retention has been measured up to four years. The retained material is determined by its ^{57}Co radioactivity using a gamma camera. Additionally the major lung clearance pathways are estimated by excretion analysis. The dogs have inhaled either monodisperse or bimodal distributed cobaltoxide aerosols in nine experiments with two dogs each. In another experiment dogs have inhaled a cobaltnitrate aerosol. The retention varies with the different aerosols but the agreement of the retention data of dogs inhaling the same aerosol is very good. The retention can be described by a sum of three exponential terms. For all experiments (even with cobalt-nitrate) which are running more than two years the long-term retention is best described with a biological half-life time (BHLT) of 400 days. The long-term fraction of the initial lung burden is about 10 percent. The short term is due to the mucociliary clearance of the tracheobronchial tree. Its fraction and BHLT correspond to the ICRP data. The intermediate phase depends on the solubility of the particles in the lung. The solubility of cobaltoxide particles in the lung depends on their size and chemical structure.

30506 (PNL-SA—11049, pp 83-89) **Effects of repeated inhalation exposure of rats to aerosols of $^{144}CeO_2$: a preliminary report.** Lundgren, D.L.; Hahn, F.F.; McClellan, R.O. (Inhalation Toxicology Research Inst., Albuquerque, NM). Feb 1983. NTIS, PC A09/MF A01.

From 30. annual meeting of the Radiation Research Society; Salt Lake City, UT, USA (18 Apr 1982).

Male and female 84-day-old Fischer-344 rats were repeatedly exposed to aerosols of $^{144}CeO_2$ to reestablish desired lung burdens of 0.04, 0.2, 1.0 or 5.0 μCi of ^{144}Ce every 60 days for one year (7 exposures). Other 84-day-old rats were exposed once to achieve desired initial lung burdens of 0.04, 0.2, 1.0 or 5.0 μCi ^{144}Ce. Older rats were exposed once to achieve desired long burdens of 1.0 or 5.0 μCi when 460 days of age-the age of the rats when repeatedly exposed for the last time. Control rats were either unexposed, sham-exposed once or repeatedly, or exposed to aerosols of particles containing stable CeO_2 once or repeatedly. The median survival time and cumulative percent survival curves were significantly decreased only in the rats repeatedly exposed to restablish a 5.0 μCi lung burden. The incidence of primary lung tumors appeared to be related to the cumulative beta radiation dose rate rather than the rate at which it was accumulated. This observation is consistent with the results from similar studies in mice and Syrian hamsters.

30507 (PNL-SA—11049, pp 90-94) **Microdosimetry of alpha-irradiated lung.** Simmons, J.A.; Richards, S.R. (Polytechnic of Central London, England). Feb 1983. NTIS, PC A09/MF A01.

From 30. annual meeting of the Radiation Research Society; Salt Lake City, UT, USA (18 Apr 1982).

This investigation attempts to calculate the dose and effects arising from the alpha-irradiaton of deep lung tissue. An image analyzer has been used to view thin sections of lung tissue which have been fixed at 10 cm inflation pressure and then stained. A $^{239}PuO_2$ particle was assumed to be trapped in an alveolar sac and the hypothetical alpha-particles emitted from it followed through air and tissue. This approach allowed the effects of the real structure to be examined in detail. It is shown that there is a fair comparison with results previously obtained with hamster lung, and that the approximation of a uniform, structureless lung is a poor one. Some of the results have tentatively been extrapolated to human lung.

30508 (PNL-SA—11049, pp 95-103) **Relevance of animal models for radionuclide inhalation in man.** Daschil, F.; Hofmann, W. (Univ. of Salzburg, Austria). Feb 1983. NTIS, PC A09/MF A01.

From 30. annual meeting of the Radiation Research Society; Salt Lake City, UT, USA (18 Apr 1982).

Our knowledge of biological effects caused by inhaled radioactive nuclides in the human lung is largely based on experiments with different animal species. For a correct interpretation of these results and their extrapolation to man, differences in anatomical and physiological parameters and their effect on lung dose distributions have to be considered. Under the assumption of the applicability of the Weibel lung model to all animal species, appropriate scaling factors for morphological and physiological parameters have been derived from experimental data available at this time. Due to these interspecific differences, initial deposition, as well as subsequent redistribution of nuclides deposited by transport mechanisms, shows a different pattern throughout the respiratory tract as compared to the human lung. The mathematical description of these processes in single generations by time-dependent differential equations permits the simulation of the temporal behavior of radionuclide activities on airway surfaces, which is of particular significance in short-term inhalation studies. Together with characteristic basal cell depths in the bronchial epithelium, radiation doses have been computed for a variety of experimental inhalation conditions and animal models.

30509 (PNL-SA—11049, pp 104-115) **Pulmonary retention of insoluble particles in man.** Bailey, M.R.; Fry, F.A. (National Radiological Protection Board, Chilton, England). Feb 1983. NTIS, PC A09/MF A01.

From 30. annual meeting of the Radiation Research Society; Salt Lake City, UT, USA (18 Apr 1982).

Twelve subjects inhaled monodisperse 1 μm and 4 μm diameter fused aluminosilicate particles (FAP) labelled with ^{85}Sr and

^{90}Y, respectively. Retention was followed for a year. Approximately 8 percent of the initial lung deposit of 1 μm particles and 40 percent of 4 μm particles cleared within 6 days. At 350 days after inhalation, retention of the initial pulmonary deposit was 46 +- 11 percent (anti x- +- SD) for the 1 μm particles and 54 +- 11 percent for the 4 μm particles. Lung dissolution rates were estimated to be 8 x 10^{-4} d^{-1} and 3 x 10^{-4} d^{-1} for the 1 μm and 4 μm particles, repsectively. The remainder cleared with a half-time of about 700 days. Pulmonary clearance of FAP in man was similar to that reported for dogs, but was much slower than that in rodents. The dissolution rate of FAP in the lungs, however, showed no great difference between man, dog and rat. It is proposed that assessments of doses to man, from inhalation of materials for which adequate human lung clearance data are not available, be based on measurement of the dissolution rates of the materials in the lungs of animals, and on the mechanical clearance of particles from the human lung measured in this experiment.

30510 (PNL-SA—11049, pp 116-126) **Modifications to the ICRP model for inhaled plutonium oxide based on the observed lung clearance and urinary excretion.** Ramsden, D. (Atomic Energy Establishment, Winfrith, England). Feb 1983. NTIS, PC A09/MF A01.

From 30. annual meeting of the Radiation Research Society; Salt Lake City, UT, USA (18 Apr 1982).

Patterns of lung clearance following the accidental intake of plutonium oxide have been previously reported by this laboratory. The observed patterns differ from those postulated in the ICRP Lung Model. This paper will report on work, partially funded by the EEC, aimed at modifying the ICRP Model in order to match observed clearance patterns. The models are extended so as to predict urinary excretion levels of plutonium following inhalation. Comparisons are made between the urine levels predicted by these models and the monitoring results obtained over some fifteen years experience. The practical use of such models in rapidly establishing the probable effective dose equivalents following suspected inhalation incidents is discussed.

30511 (PNL-SA—11049, pp 127-137) **Measurements of the microdistributions of α-active nuclei in the human lung.** Henshaw, D.L.; Fews, A.P. (Univ. of Bristol, England). Feb 1983. NTIS, PC A09/MF A01.

From 30. annual meeting of the Radiation Research Society; Salt Lake City, UT, USA (18 Apr 1982).

Using new techniques for alpha-autoradiography developed in this laboratory the authors are currently engaged in a major study of the microdistribution of α-active nuclei in the human lung. The technique is based on the highly sensitive plastic nuclear track detector CR-39. Samples of tissue obtained at autopsy are dissected and mounted against CR-39 and stored deep frozen for 3 to 30 months. Alpha track positions on the plastic can be accurately correlated with tissue features, and activities down to ~ 10^{-15} Ci g^{-1} can be detected. The corresponding track measurements provide: (1) a local determination of the ^{222}Rn diffusion coefficient in tissue which enables the separate activities of ^{222}Rn + daughter activity to be separately determined and (2) determination of the abundance values of α-active nuclides present. The authors seek case histories representing a wide spectrum of lung burden, including the population in general, smokers, miners, and workers in the nuclear industry. In each lung the activity has been studied in the tracheobronchial tree, lung parenchyma and the lymph nodes. Data will be presented summarizing our current results.

30512 (PNL-SA—11049, pp 139-143) **Assessment of lung dose from radon daughters in the mine atmosphere.** Vohra, K.G.; Subba Ramu, M.C. (Bhabha Atomic Research Center, Bombay, India). Feb 1983. NTIS, PC A09/MF A01.

From 30. annual meeting of the Radiation Research Society; Salt Lake City, UT, USA (18 Apr 1982).

Assessment of dose to the tracheo-bronchial region of the lung due to breathing of air containing radon daughter products has become highly significant ever since the epidemiological studies have shown that the uranium mine workers are likely to develop cancer in this region of the lung. Radiation dose to the critical region of the lung of the uranium mine worker can be estimated with a knowledge of the deposition and retention rates. Both the unattached and attached fractions of radon daughters in the mine atmosphere are taken into consideration. The percentages of the total activity deposited in the tracheo-bronchial region as unattached and attached fractions would be 12 and 5.2 respectively for nasal breathing. However, the alpha-energy absorption due to the deposition of the attached fraction works out to be 2.4 times that due to the unattached fraction. Using the above data on realistic conditions of the mine atmosphere and appropriate values for the regional masses of the tracheo-bronchial tissue irradiated by the two alpha energies, 6 MeV (Ra-A) and 7.69 MeV (Ra-C') from the deposited radon daughters the authors have estimated the activity to dose conversion factor for radon daughter inhalation to be 15 μgray per Bq. hr. per liter. The implications of this factor in the dose response relationship evaluated in terms of dose-equivalent limits by ICRP are discussed in some detail.

30513 (PNL-SA—11049, pp 144-151) **Properties of radon progeny aerosols in mainstream cigarette smoke and the alpha dose at segmental bifurcations of smokers.** Martell, E.A.; Sweder, K.S. (National Center for Atmospheric Research, Boulder, CO). Feb 1983. NTIS, PC A09/MF A01.

From 30. annual meeting of the Radiation Research Society; Salt Lake City, UT, USA (18 Apr 1982).

Size distributions of radon progeny aerosols were determined by passing radon progeny-tagged smoke particles and ^{212}Pb-tagged smoke particles through burning cigarettes, collecting the mainstream smoke particles on a multistage cascade impactor, and determining the radioactivity on each impactor stage by low-level β^- counting. The Activity Median Aerodynamic Diameter (AMAD) of radon progeny in mainstream smoke varies inversely with the flow-rate of air through the burning cigarette, with an AMAD of ~ 1.5 μm at a puff velocity of 18 cm^3 s^{-1} (about average for cigarette smokers). Particles of this size are selectively deposited in hot spots at the carina of segmental bifurcations to a remarkable degree. Experimental evidence on the solubility, persistence, and distribution of ^{210}Pb, ^{212}Pb-, and ^{214}Pb-enriched particles deposited on the bronchial epithelium of cigarette smokers is discussed. The excess alpha radiation dose at the segmental bifurcations of cigarette smokers is estimated for a smoking rate of one pack per day and for average indoor radon and thoron progeny levels. The smoker is subjected to alpha radiation in the bronchial epithelium fom three sources: (1) from indoor radon and thoron progeny inhaled between cigarettes; (2) from ^{214}Po, ^{212}Po and ^{212}Bi in large, mainstream smoke particles, and (3) from ^{210}Po which grows into ^{210}Pb-enriched particles which persist at bifurcations. It is estimated that the combined alpha dose in hot spots at bifurcations of smokers who die of lung cancer may approach or exceed 100 rads (2000 rem).

30514 (PNL-SA—11049, pp 152-156) **Epidemiologic approach to determining the REM dose to bronchial epithelium from radon daughter exposures in man.** Radford, E.P. (Univ. of Pittsburgh, PA). Feb 1983. NTIS, PC A09/MF A01.

From 30. annual meeting of the Radiation Research Society; Salt Lake City, UT, USA (18 Apr 1982).

Dosimetric evaluation of exposures to the bronchial epithelial stem cells from inhalation of alpha emitters is complex and the number of assumptions required leads to substantial uncertainty. Moreover, it is evident that many factors such as variable breathing patterns will modify the results. An empirical approach to determining the rem dose biologically effective in producing bronchial cancer by inhalation of radon daughters is possible by comparison of cumulative exposure in terms of Working Level Months with the dose of penetrating low-LET radiation to produce the same bronchial cancer risk in other groups investigated. This method is possible when the dosimetry of the comparison groups is well known and lung cancer risks are reasonably well-defined. A number of epidemiologic considerations must be taken into account in such comparisons, however. These include age at exposure, length of following, age at expression of or death from cancer, and for underground miners exposed to radon daughters the lung cancer-latent period model applied to long-term exposures. Use of these methods gives results consistent with dosimetry derived from models of bronchial deposition and clearance, as well as reasonable values for the quality factor for alpha radiation. This comparison gives an average equivalent dose for a working population exposed to short-lived isotopes.

30515 (PNL-SA—11049, pp 157-167) **Estimation of lung cancer risk from environmental exposure to airborne plutonium from the Rocky Flats Plant.** Sutherland, J.V. (Univ. of Colorado School of Medicine, Denver). Feb 1983. NTIS, PC A09/MF A01.

From 30. annual meeting of the Radiation Research Society; Salt Lake City, UT, USA (18 Apr 1982).

A three-phase study was undertaken to (1) determine the nature of disagreement among scientists concerning risk of environmental release of plutonium, (2) develop an analytic procedure for determining risk based on clearly stated principles defensible by reference to the literature, and (3) develop estimates of radiation dose to the lung from exposure to plutonium in ambient air for the purpose of evaluating risk to an individual with a specified age and smoking history. Eleven epidemiologists, biostatisticians and radiation scientists participated in Phase I of the study. It was shown that no clearly stated analytical principles for risk estimation were in common use, resulting in widely divergent risk estimates. Five of these disagreeing scientists in Phase I (including all cancer epidemiologists in the Denver metropolitan area) were chosen for Phase II of the study. A single analytic procedure was developed which was unanimously agreed upon. This procedure was dependent on the estimate of dose to the lung from ambient air levels of Rocky Flats plutonium. In Phase III of the study, a panel of four radiation scientists developed a procedure for estimation of dose to the lung from chronic exposure to plutonium ambient air levels. Results from all phases of the study were used to develop a method for estimation of relative risk of lung cancer for an individual, given plutonium dose to the lung, age, smoking history and other radiation exposure.

30516 (PNL-SA—11049, pp 168-177) **Estimation of the bronchial cancer risk from the inhalation of long-lived alpha emitting radionuclides.** Johnson, J.R. (Atomic Energy of Canada, Ltd., Ontario); James, A.C.; Birchall, A. Feb 1983. NTIS, PC A09/MF A01.

From 30. annual meeting of the Radiation Research Society; Salt Lake City, UT, USA (18 Apr 1982).

It is generally accepted that the inhalation of alpha emitting ^{222}Rn progeny is associated with an increased risk of bronchial cancer resulting from the dose to basal cells of the bronchial epithelium. Therefore, it is of interest to calculate doses to these cells from the inhalation of other alpha emitting materials, and to estimate the risk of bronchial cancer by dosimetric comparison with ^{222}Rn progeny. This paper reports the results of basal cell dose calculations from the inhalation of insoluble compounds of ^{234}U, ^{235}U, ^{238}U, and ^{239}Pu. These doses, along with recent dose and risk estimates for ^{222}Rn progeny, are then used to calculate the risk per unit of inhaled activity. These risk estimates are compared to values obtained using the standard International Commission on Radiological Protection (ICRP) lung model and ICRP estimates of risk per unit dose. The risk from ^{222}Rn progeny and from long-lived alpha emitting radionuclides in uranium mines are also compared.

30517 (PNL-SA—11049, pp 178-188) **Theory of age dependence in the incidence of lung carcinomas following inhalation of a radioactive atmosphere.** Crawford-Brown, D.J. (Oak Ridge National Lab., TN). Feb 1983. NTIS, PC A09/MF A01. Contract W-7405-ENG-26.

From 30. annual meeting of the Radiation Research Society; Salt Lake City, UT, USA (18 Apr 1982).

A theory is developed to provide a tool for assessing the effect of age on the induction of lung carcinomas following exposure to a radiocontaminated atmosphere. Estimates are made of the pattern of deposition and disintegration of inhaled radionuclides in the lungs of all human age groups. These figures are converted to estimates of basal nuclei doses as well as the dose to the average lung mass. This information is then combined with a theory relating dose, the number of irradiated cells, and the rate of turnover of those cells to the risk of developing lung cancer. Lastly, it is shown that this information may be coupled to the atomic bomb survivor data to provide risk estimates for instances of non-uniform irradiation. An example employing the theoretical model indicates that the relative risk to children can be larger than that to adults by more than an order of magnitude. The impact of various conceptual models of risk is underlined, particularly as it applies to the interpretation of the follow-up period for the atomic bomb survivor data.

30518 **Effect of hypertonicity and X radiation on DNA synthesis in normal and ataxia-telangiectasia cells.** Painter, R.B.; Young, B.R. (Univ. of California, San Francisco). *Radiation Research;* **92**: No. 3, 552-559(Dec 1982).

Normal human cells and cells from patients with ataxia-telangiectasia (A-T) were exposed to culture medium made hypertonic by raising the NaCl concentration. The rate of DNA synthesis in both types of cells was depressed as a function of increasing hypertonicity. When cells of both types were exposed to X radiation and incubated in hypertonic medium, DNA synthesis appeared to be more radioresistant than in cells incubated in normal medium. Velocity sedimentation analysis showed that this was due to a hypertonicity-induced inhibition of replicon initiation, which is the same process affected by X radiation, indicating that the two treatments were not additive. After a 5-hr incubation in hypertonic medium, there was a new steady state of replicon initiation and elongation similar to that existing in cells grown in normal medium, except that fewer replicons were participating. At this time DNA synthesis in each type of cell had a characteristic response to radiation, i.e., radiosenstivie in normal cells and radioresistant in A-T cells. These results suggest that radioresistant DNA synthesis in A-T cells is not due to increased condensation of chromatin.

30519 **The repair of potentially lethal and sublethal damage in unfed plateau-phase cultures irradiated at 0.78 Gy/hr.** Freeman, M.L.; Sierra, E.; Dietch, A.D.; Cubbon, R.M. (Columbia Univ., New York). *Radiation Research;* **92**: No. 3, 596-603(Dec 1982). Contract AC02-78EV04733.

Unfed plateau-phase cultures of Chinese hamster ovary (CHO) cells were irradiated at 0.78 Gy/hr to determine if accumulation and repair of sublethal and/or potentially lethal damage diminished as a function of small multiple doses and whether culture age affected repair. The repair of both potentially lethal and sublethal lesions was unaffected by aging or absorbed dose. Furthermore, repair of potentially lethal damage was associated with a decrease in the linear parameter of the equation - $\ln s = \alpha D + \beta D^2$, suggesting that lesions produced by this process can be repaired.

30520 **The turnover of tritium in cell nuclei, chromatin, DNA, and histone.** Commerford, S.L.; Carsten, A.L.; Cronkite E.P. (Brookhaven National Lab., Upton, NY). *Radiation Research;* **92**: No. 3, 521-529(Dec 1982). Contract AC02-76CH00016.

Mice were exposed to constant internal levels of tritiated water starting at conception and continuing until they were 8 months old. At this point, exposure was discontinued and at various intervals thereafter nuclei, chromatin, and chromatin components were isolated from several tissues and analyzed for nonexchangeable tritium. Initially, about two-thirds of the nonexchangeable tritium in cell nuclei is present in components other than chromatin, but after 8 weeks these labeled components have either vanished or dwindled into relative insignificance and essentially all tritium remaining in the nucleus is in DNA or histone. Although the amount of tritium initially present in DNA and histone is small compared to the that in nuclear water, it remains much longer. Consequently the radiation dose from tritium in DNA plus histone may exceed that from tritiated water in cells with a long life span. However, tritium is incorporated into DNA and histones of cells only when they reproduce. Therefore, after transient exposure to tritiated water, this component will contribute significantly to the radiation of only those nuclei from cell with a long life span which happen to reproduce at the time of exposure. Such cells are rare in adults but common in juveniles and embryos.

30521 **Fission-spectrum neutrons at reduced dose rates enhance neoplastic transformation.** Hill, C.K.; Buonaguro, F.M.; Myers, C.P.; Han, A.; Elkind, M.M. (Argonne National Lab., IL). *Nature (London);* **298**: 67-69(1 Jul 1982). Contract W-31-109-ENG-38.

The effect of reduced dose rates of radiation on neoplastic transformation was studied using the C3H/1OT1/2 mouse embryo-derived cell line developed by Reznikoff et al. In this cell system,

transformation can be measured by scoring the foci of piled-up cells that occur after the loss of contact inhibition of growth. We report here that reduction of the dose rates of fission-spectrum neutrons (of mean energy 0.85 MeV) from 38.5 or 10.3 to 0.43 and 0.086 rad min^{-1} has no effect on cell killing but increases transformation frequency. These data are in contrast to previously published results obtained with ^{60}Co γ rays where reduction of the dose rate resulted in a marked reduction in transformation frequency. Although cancer induction in man involves many factors besides those at the cellular level, the implication from our findings is that the risk of cancer induction due to work-related exposure to neutrons in the nuclear power industry may be greater than previously thought.

30522 Characterization of a UV-resistant mutant of CHO-Kl with normal repair activity. Newman, C.N. (Pacific Northwest Lab., Richland, WA). *Mutation Research;* **96**: 99-108(1982). Contract AC06-76RL01830.

The biological and repair responses of Mut 8-16, an ultraviolet radiation (UV)-resistant derivative of CHO-Kl, were characterized with respect to UV and to the active chemical carcinogen, benzo(a)pyrene-4,5-oxide. In comparison to the parent, the UV-survival response curve of this mutant showed a significantly larger shoulder but little or no difference in the slope of the exponential survival region. In addition, the mutant cell line demonstrated significantly larger mutation frequencies at high survival UV fluences, but smaller mutation frequencies at high survival equitoxic concentrations of the carcinogen benzo(a)pyrene-4,5-epoxide relative to the parent cell. However, these relative differences in mutation frequencies between parent and mutant appeared to decrease as survival decreased. Despite these observations there were no measurable differences in excision-repair, or in post-replication repair although the mutant appeared to show a nominal reduction (not an enhancement) of replication-repair activity following the UV exposure. These data imply there is another lesion recognition system in CHO cells whose effects on survival and mutation are best observed at low doses of carcinogen and/or radiation but which are masked at higher doses where major repair processes dominate. The dissimilar relationship of cytotoxicity to mutation induction frequency observed in UV and carcinogen treated mutant vs. parent cell lines, imply that the probabilities for lethality and mutation are independent of one another in the presence of otherwise unrepaired (residual) damage.

30523 Deposition and retention of 0.1 μm $^{67}Ga_2O_3$ aggregate aerosols in rats following whole body exposures. Wolff, R.K.; Griffis, L.C.; Hobbs, C.H.; McClellan, R.O. (Lovelace Biomedical and Environmental Research Inst., Albuquerque, NM). *Fundamental and Applied Toxicology;* **2**: 195-200(1982). Contract AC04-76EV01013.

Determinations were made of respiratory tract deposition and gastrointestinal tract burdens following whole body inhalation exposures, typical of those used in many chronic exposures; these were compared to values obtained in nose-only exposures. Fischer-344 rats were exposed in large volume chambers, in a whole body mode, to 0.1 μm volume median diameter (VMD) $^{67}Ga_2O_3$ particles 5 hrs/day. Deposition per unit of exposure time and retention were essentially identical following either 1 or 3 day exposures. The lung deposition of particles was 2.8 units/hr for males and 2.2 units/hr for females if the exposure concentration was expressed as 1 unit/L. These values represent a deposition of approximately 15% of the inhaled particles, similar to values obtained for nose-only exposures. Aerosol deposition per kgm body weight was 24% higher in females than males. Passage of material into the gastrointestinal tract was 1.6-fold greater for these whole body exposures as compared to nose-only exposures to the same aerosol mainly resulting from extra material ingested by grooming of the pelt. Approximately 60% of the pelt burden was calculated to be ingested following whole body exposures.

30524 Psoralen-plus-light damage and repair in transforming DNA of Bacillus subtilis. Hadden, C.T. (Oak Ridge National Lab., TN). pp 143-151 of Genetic exchange: a celebration and a new generation. Streips, U.N.; Guild, W.R.; Goodgal, S.H.; Wilson, G.A. (eds.). New York, NY; Marcel Dekker, Incorporated (1982). Contract AS05-76EV04568;W-7405-ENG-26.

The relative contributions of excision and recombination in the repair of damage by a 8-methoxypsoralen (8-MOP) plus black light to Bacillus subtilis have been investigated. The results indicate that the pyrimidine dimer excision system and a recombination pathway are probably both involved in repair of lethal damage to cells exposed in vivo to 8-MOP plus black light, but repair is not very efficient. Transforming DNA exposed in vitro to 8-MOP plus black light was inactivated mainly by crosslinks rather than by monoadducts, and was repaired predominantly by an incision-dependent process. There was very little demonstrable damage-induced recombination in transforming DNA.

30525 Studies on the multistage nature of radiation carcinogenesis. Fry, R.J.M. (Oak Ridge National Lab., TN); Ley, R.D.; Grube, D.; Staffeldt, E. *Carcinogenesis (New York);* **7**: 155-165(1982). Contract W-7405-ENG-26;W-31-109-ENG-38.

The effectiveness of ionizing radiation and ultraviolet radiation (uvr) in the induction of carcinogenesis in mice and humans is discussed. It is clear that with low-dose levels of ionizing or uvr, the number of initiation events exceeds the numbers of tumors that grow to a detectable size. Ionizing radiation, which is a complete carcinogen, appears to be a more effective initiator than an enhancer or promoter. In the case of uvr, with or without photosensitizers such as psoralens, the requirement of a relatively large number of exposures for carcinogenesis suggests that the expression of the initiated cells as frank tumors requires a number of events spread out over the time of the development of the tumor. (KRM)

30526 Risk estimation and decision making: the health effects on populations of exposure to low levels of ionizing radiation. Fabrikant, J.I. *Pediatric Dentistry;* **3**: No. 2, 400-413(1982). Contract W-7405-ENG-48.

Presented is a background for an understanding of the potential health effects in populations exposed to low-level radiation. Discussed is the knowledge about the health effects of low-level radiation. Comments on how the risks of radiation-induced cancer and genetically-related ill-health in man may be estimated, the sources of the scientific and epidemiological data, the dose-response models used, and the uncertainties which limit precise estimates of excess risks from radiation. Also discussed are the implications of numerical risk estimation for radiation protection and decision-making for public health policy.

30527 Biophysical aspects of radiation carcinogenesis. Kellerer, A.M.; Rossi, H.H. pp 569-616 of Comprehensive treatise. Volume 1, 2nd edition. Becker, F.F. (ed.). New York, NY; Plenum Publishing Corporation (1982). Contract AC02-78EV04733.

The application of radiation physics to the subject of radiation carcinogenesis is described and quantitated in this review. Interaction of radiation and matter, and general stochastic considerations of linear dose-effect relationships are reviewed. The chapter also discusses the quadratic dependence of the cellular effect on specific energy. Some practical applications of biophysics to radiation carcenogenesis including cellulor transformation studies, induction of neoplasms in the Spraque-Dauley rat, and radiation leukomogenesis studies, are described. A formal derivation of a biophysical theorem is given in an appendix. (KRM)

30528 Hypersensitivity to mutation and sister-chromatid-exchange induction in CHO cell mutants defective in incising DNA containing UV lesions. Thompson, L.H.; Brookman, K.W.; Dillehay, L.E.; Mooney, C.L.; Carrano, A.V. (Univ. of California, Livermore). *Somatic Cell Genetics;* **8**: No. 6, 759-773(1982). Contract W-7405-ENG-48.

Five UV-sensitive mutant strains of CHO cells representing different genetic complementation groups were analyzed for their ability to perform the incision step of nucleotide excision repair after UV exposure. The assay utilized inhibitors of DNA synthesis to accumulate the short-lived strand breaks resulting from repair incisions. After 6 J/m^2, each of the mutants showed $< 10\%$ of the incision rate of the parental AA8 cells. After 50 J/m^2, the rate in AA8 was similar to that at 6 J/m^2, but the rates in the mutants were significantly higher ($\sim$ 20% of the rate of AA8). Thus by this

incision assay the mutants were phenotypically indistinguishable. Each of the mutants were hypersensitive to mutation induction at both the hprt and aprt loci by a factor of 10, and in the one strain tested ouabain resistance was induced sevenfold more efficiently than in AA8 cells. Sister chromatid exchange was also induced with sevenfold increased efficiency in the two mutant strains examined. Thus, here CHO mutants resemble xeroderma pigmentosum cells in terms of their incision defects and their hypersensitivity to DNA damage by UV.

30529 **p-Aminobenzoic acid-sunlamp sensitization of pyrimidine dimer formation and transformation in human cells.** Sutherland, B.M. (Brookhaven National Lab., Upton, NY). *Photochemistry and Photobiology;* **36**: 95-97(1982).

In the presence of sunlamp radiation, p-aminobenzoic acid sensitizes pyrimidine dimer formation in the DNA of human skin fibroblasts. It also sensitizes the sunlamp-induced transformation of such cells to anchorage-independent growth.

30530 **(CONF-820356—4) Relation of mouse specific-locus tests to other mutagenicity tests and to risk estimation.** Russell, W.L. (Oak Ridge National Lab., TN (USA)). 1982. Contract W-7405-ENG-26. 28p. NTIS, PC A03/MF A01. Order Number DE83009836.

From Conference of the National Institute of Environmental Health Sciences; Research Triangle Park, NC, USA (28 Mar 1982).

A major difficulty in reaching estimates of risk from the wide array of chemicals to which man is exposed is that results from the simple, relatively inexpensive, mutagenicity tests, e.g., those obtained with Salmonella, have given poor correlation with the results from tests, such as the specific-locus test, that measure mutation frequency in the offspring of treated mammals. This paper discusses the use and value of the specific-locus test in mice, presents evidence that the results of specific-locus tests are representative of the mutagenicity of various chemicals to humans, and proposes hypotheses why the test does not correlate with those on simple systems (e.g., the Ames test). (ACR)

30531 **(CONF-830341—1) Response of the North American corn belt to climatic warming.** Blasing, T.J.; Solomon, A.M. (Oak Ridge National Lab., TN (USA)). 1983. Contract W-7405-ENG-26. 17p. NTIS, PC A02/MF A01. Order Number DE83009830.

From Conference on interactions between climate and biosphere; Osnabruck, F.R. Germany (21 Mar 1983).

The climate of the North American corn belt was characterized as part of an effort to estimate the effects of climatic change on that agricultural region. Heat and moisture characteristics of the current corn belt were first identified. Locations of those characteristics were then mapped, based on a climate simulated to result from doubling the amount of atmospheric CO_2. Such projections of corn-belt location were made both with and without allowance for earlier planting dates under a warmer climate. Because the direct effects of CO_2 on plants, improvements in farm technology, and plant breeding are not considered, the resulting projections represent an extreme or worst case. Results indicate that even for such a worst case, climatic conditions favoring corn production would not extend very far into Canada. Greatest translocations are projected for the western, or driest, part of the corn belt where other crops such as winter wheat could replace corn. However, this kind of exercise clearly shows that the use of climate-model output requires several highly questionable assumptions about changes in the timing and regional distribution of precipitation accompanying a climatic warming. Increased use of climatic data and improved specification of CO_2-induced increases in water-use efficiency of corn are suggested for more credible projections of corn-belt responses to increasing CO_2.

30532 **(DOE/EV/10598—1) Non-regulatory and cost-effectiveness control of carcinogenic hazard. The beginnings: a methodology for using animal data to decrease uncertainty in human risk of carcinogens released by energy technologies.** Crouch, E.A.C.; Feller, J.; Fiering, M.B.; Hakanoglu, E.; Wilson, R.; Zeise, L. (Harvard Univ., Cambridge, MA (USA). Energy and Environmental Policy Center). Sep 1982. Contract AC02-81EV10598. 12p. NTIS, PC A02/MF A01. Order Number DE83009531.

A logical cost effective procedure for assessing carcinogenic risk associated with emerging energy technologies is outlined. All chemicals are assumed to be carcinogenic with a potency that has to be measured. In this scheme a non-carcinogen is a chemical with zero potency. If the carcinogenic potency in animals has not been measured, it may be assumed from an a priori measure. Using estimates of potency, exposure, and an interspecies factor (which also accounts for uncertainties in extrapolating the animal data to man), an estimate of risk and the uncertainty associated with that estimate is made, together with upper bounds on the risk. If the upper bound is small the risk is negligible and can be ignored. If it is large, the exposure at the level proposed should not be permitted. However further information may be obtained which changes the risk estimate or lowers the uncertainty so that the upper bound on the risk is reduced. Notice that estimation of the uncertainty is as important as estimation of a best value of risk.

30533 **(LA—9479-PR, pp 11-12) Effects of solubility on tumorigenesis of two shale crude oils and two natural petroleums.** Wilson, J.S.; Holland, L.M. Oct 1982. NTIS, PC A08/MF A01.

In Los Alamos Life Sciences Division's biomedical and environmental research programs. Progress report, January-December 1981.

The possible contribution of solubility to overall toxicity and tumorigenesis of two shale oils and two natural petroleums was studied using three vehicles: acetone, cyclohexane, and a mixture of 30% cyclohexane-70% acetone. It seems apparent that the solubility of these test oils in these vehicles has an effect on cytotoxicity and tumor latency but minimal effect on overall tumor incidence in mice. (DLS)

30534 **(LA—9479-PR, pp 13-16) Dose-response study for three shale crude oils and two natural petroleums.** Holland, L.M.; Wilson, J.S. Oct 1982. NTIS, PC A08/MF A01.

In Los Alamos Life Sciences Division's biomedical and environmental research programs. Progress report, January-December 1981.

The mouse epidermal carcinogenesis assay has been used to evaluate dose-response carcinogenic potency for three shale oils and two natural petroleums. Parameters studied included tumor incidence and latency resulting from various concentrations of each test material. The shale oils appear to be more potent than the natural petroleums in tumorigenic potency and demonstrated a process-dependent difference. (DLS)

30535 **(LA—9479-PR, pp 17-19) Inhalation studies.** Holland, L.M.; Wilson, J.S.; Tillery, M.I.; Gonzales, M.; Vigil, E.A.; Royer, G.; Stavert, D.; Archuleta, D. Oct 1982. NTIS, PC A08/MF A01.

In Los Alamos Life Sciences Division's biomedical and environmental research programs. Progress report, January-December 1981.

Long-term, high concentration inhalation studies of shale dusts using female Fisher 344 rats were conducted using raw shale, spent shale, and quartz. Histopathological examinations revealed multiple indications of fibrosis and primary lung tumors in each group. Based on current data, it is indicated that high exposure levels have led to a lung-scar cancer phenomenon. (DLS)

30536 (LA—9479-PR, pp 19-21) **Effect of shale oil and ultraviolet light on delayed hypersensitivity in mice.** Baron, P.A. Oct 1982. NTIS, PC A08/MF A01.

In Los Alamos Life Sciences Division's biomedical and environmental research programs. Progress report, January-December 1981.

Delayed type hypersensitivity (DTH) to 2, 4-dinitro-1-fluorobenzene (DNFB) in mice is studied with respect to the interactions of ultraviolet light and shale oil. Results indicate that the combination of either UVA or UVB with PCSO shale oil does not result in an additional deleterious effect above that associated with the shale oil alone. (DLS)

30537 (LA—9479-PR, pp 26-30) **Nickel arsenide (Ni_5As_2): the relationship between its solubility and its toxicity and mutagenicity.** Gurley, L.R.; Tobey, R.A.; Valdez, J.G.; Miglio, J.J.; Cox, S.H.; Barham, S.S. Oct 1982. NTIS, PC A08/MF A01.

In Los Alamos Life Sciences Division's biomedical and environmental research programs. Progress report, January-December 1981.

To determine whether fugitive nickel arsenides from an oil shale retort process could pose a threat to personnel or organisms in the environment, the toxicity of Ni_5As_2 particles suspended with Chinese hamster cells in culture were examined. It was concluded the soluble produce of Ni_5As_2 is acutely toxic to cells at low concentrations (less than 1 ppM) but not mutagenic. (DLS)

30538 (LA—9479-PR, pp 36-38) **Zinc-induced enhancement of resistance to alkylating agents.** Tobey, R.A.; Enger, M.D.; Griffith, J.K.; Hildebrand, C.E. Oct 1982. NTIS, PC A08/MF A01.

In Los Alamos Life Sciences Division's biomedical and environmental research programs. Progress report, January-December 1981.

Results presented indicate the existence in cadmium-resistant cultured cell variants of Chinese hamster cells of a non-metallothionein dependent, zinc-inducible protective response which grossly decreases alkylating-agent toxicity. Possible mechanisms for this zinc-induced response are discussed. (DLS)

30539 (LA—9479-PR, pp 47-49) **Genes coding for metal-induced synthesis of RNA sequences are differentially amplified in mammalian cells.** Walters, R.A.; Enger, M.D.; Hildebrand, C.E.; Griffith, B.; Griffith, J.K. Oct 1982. NTIS, PC A08/MF A01.

In Los Alamos Life Sciences Division's biomedical and environmental research programs. Progress report, January-December 1981.

In order to define the role(s) played by cellular processes in cadmium detoxification, the molecular events associated with cadmium exposure have been examined in Cd^{++}-resistant and Cd^{++}-sensitive Chinese hamster cells. Three cadmium-resistant variants have been selected by stepwise culture in increasing Cd^{++} concentrations. Studies designed to probe cellular responses to Cd^{++} treatment indicate Cd^{++} treatment of the resistant variants induces the synthesis of a highly abundant poly A^+ RNA class, a major portion of which is metallothionein mRNA. Not only is this RNA class differentially regulated in resistant variant cells but the structural genes encoding these inducible RNAs are differentially amplified in the resistant variants. However, there is not a direct correlation between the degree of gene amplification and resistance.

30540 (LA—9479-PR, pp 49-52) **Molecular cloning and DNA sequence of the Chinese hamster metallothionein-II gene.** Griffith, B.B.; Walters, R.A.; Griffith, J.K. Oct 1982. NTIS, PC A08/MF A01.

In Los Alamos Life Sciences Division's biomedical and environmental research programs. Progress report, January-December 1981.

Studies have focused on the genetic mechanisms which regulate the concentrations of essential and toxic trace metals in normal and abnormal mammalian cells. In this regard, researchers recently reported that cadmium-sensitive and cadmium-resistent Chinese hamster cells differ significantly in their ability to induce a class of low-molecular-weight proteins, which includes the metal-binding proteins, metallothionein I and II. In order to study the genetic basis of such differences, we have constructed recombinant DNA-containing plasmids from the mRNA that encodes these differentially induced proteins. Researchers describe here the details of the construction of these recombinant DNA species and based on DNA nucleotide sequence data, identify one component of this induced battery as metallothionein II.

30541 (LA—9479-PR, pp 52-54) **Differential induction by cadmium of a low-complexity ribonucleic acid class in cadmium-resistant and cadmium-sensitive mammalian cells.** Griffith, J.K.; Enger, M.D.; Hildebrand, C.E.; Walters, R.A. Oct 1982. NTIS, PC A08/MF A01.

In Los Alamos Life Sciences Division's biomedical and environmental research programs. Progress report, January-December 1981.

The Chinese hamster ovary (CHO) cell subline Cd/sup r/20F4 is distinguished from the parental CHO line by a 100 fold higher cadmium toxic threshold, a 50 fold or greater cadmium-inducible metallothionein synthesis rate, and a 50 fold or greater level of cadmium-inducible translatable metallothionein messenger ribonucleic acid (mRNA). We determined the size distribution of the Cd/sup r/20F4 RNA species which were both highly abundant and inducible by cadmium. Highly abundant, cadmium-induced RNA species were identified by the increase in the ratio of ^3H:^{14}C radioactivity. A single peak of high ^3H:^{14}C radioactivity was resolved from the RNA mixture and migrated with RNA whose modal chain length was 400 nucleotides. This RNA encodes four inducible proteins, including metallothionein. The abundant, inducible RNA sequences comprise about half of the newly synthesized RNA mass in the 400-NT RNA fraction. We conclude that about 4% of the total newly synthesized RNA from cadmium-induced Cd/sup r/20F4 cells represents cadmium-induced abundant RNA sequences.

30542 (LA—9479-PR, pp 54-56) **Somatic cell genetics approaches to the analysis of regulation of metallothionein gene expression.** Hildebrand, C.E.; Chen, D.J.C.; Enger, M.D.; Griffith, J.K.; Tobey, R.A.; Walters, R.A. Oct 1982. NTIS, PC A08/MF A01.

In Los Alamos Life Sciences Division's biomedical and environmental research programs. Progress report, January-December 1981.

Studies of the responsiveness of the CHO cell to either Cd^{2+} or Zn^{2+} indicated that this cell line was deficient in expression of MT genes at the phenotypic level. Several stable Cd^{2+}-resistant variants have been derived from the Cd^{2+}-sensitive CHO cell. These variants designated Cd/sup r/2C10, 20F4, and 30F9 show Cd^{2+}-toxic thresholds of 2, 26, and 40 μM $CdCl_2$, while the CHO cell has a toxic threshold of 0.2 μM Cd^{2+}. In all of the Cd^{2+}-resistant variants, induction of MT gene expression is a major factor in conferring the Cd^{2+}-resistant phenotype. In addition to induction of MT genes, several other metal-inducible factors have been identified with the Cd^{2+}-resistant phenotype. To further analyze the genetic regulation of the Cd^{2+}-resistant phenotype, intraspecific somatic cell hybrids have been constructed between CHO and the Cd/sup r/2C10 variant. The properties of three of the CHO x Cd/sup r/2C10 hybrids are summarized.

30543 (LA—9479-PR, pp 56-59) **Inducibility of metallothionein gene expression as an indicator of DNA damage and repair proficiency in human cells.** Hildebrand, C.E.; Strniste, G.F.; Hanners, J.L. Oct 1982. NTIS, PC A08/MF A01.

In Los Alamos Life Sciences Division's biomedical and environmental research programs. Progress report, January-December 1981.

In the present report, evidence is presented to suggest the general utility of a ubiquitous inducible gene function in studies of DNA damage and repair both in cultured cells and in vivo. The specific genes of interest in this study code for low-molecular-weight, metal-binding proteins, metallothioneins. In this study we have characterized the Zn^{2+}-mediated induction of metallothionein in normal human skin fibroblasts and in xeroderma pigmentosum (XP) cells having a defect in the ability to repair lesions introduced into DNA by ultraviolet (uv) light. Evidence is provided indicating that this inducible system may have value in detecting repair defi-

ciency conditions for a specific class of DNA lesions (transcription-termination events) in human populations.

30544 (LA—9479-PR, pp 59-61) **Quantitation of mutations induced by metabolically activated mutagens in normal human fibroblasts.** Chen, D.J.; Okinaka, R.T.; Strniste, G.F. Oct 1982. NTIS, PC A08/MF A01.

In Los Alamos Life Sciences Division's biomedical and environmental research programs. Progress report, January-December 1981.

Many chemical mutagens such as polycyclic aromatic hydrocarbons (PAH), aromatic amines, nitrosamines, and aflatoxins require metabolism by mixed-function oxidases and related enzymes to induce such biological endpoints as cell cytotoxicity and mutagenicity. We have adapted a rat-liver microsomal S9 activation system both for cultured Chinese hamster ovary (CHO) cells and normal human skin fibroblasts. We have been able to show that metabolic activation of three known promutagens/procarcinogens results in mutations at the HGPRT locus in normal embryonic human skin fibroblast cells (GM10).

30545 (LA—9479-PR, pp 61-65) **Mutagenicity of various oil shale retort process waters in the Ames/Salmonella bioassay.** Nichols, J.W.; Strniste, G.F. Oct 1982. NTIS, PC A08/MF A01.

In Los Alamos Life Sciences Division's biomedical and environmental research programs. Progress report, January-December 1981.

Using Salmonella tester strains TA98 and TA100 researchers have examined for mutagenic activity a variety of process waters from the Paraho facility (aboveground retort), the modified in situ retort facilities of Occidental and Rio Blanco, the true in situ retort of Geokinetics and waters obtained from the Fischer retorting of an Estonian oil shale sample. The results are presented. Mutagenic activity was seen only in those reactions which contained S9 fraction. That is, researchers were unable to detect any direct acting mutagenic activity in these waters when assessed with this in vitro test. Although each water sample was examined over a dose range of up to 300 μl, the dose-response curves for mutagenically active waters were generally linear only up to sample volumes of < 100 μl. Deviations from a linear dose response can be partially accounted for by cytotoxic properties of these active waters at higher concentrations.

30546 (LA—9479-PR, pp 65-68) **Genotoxicity of natural and synthetic oils in the Ames/Salmonella test.** Nichols, J.W.; Strniste, G.F. Oct 1982. NTIS, PC A08/MF A01.

In Los Alamos Life Sciences Division's biomedical and environmental research programs. Progress report, January-December 1981.

Dimethyl sulfoxide (DMSO) extracts of a variety of natural and synthetic oils and upgraded petroleum products were tested for both cytotoxic and mutagenic activities in the Ames/Salmonella bioassy. Using both TA 98 and TA 100 bacterial strains with and without the addition of Aroclor 1254-induced rat hepatic S9 fraction in our routine screening strategy. In agreement with previous observations, natural petroleums are only marginal in activity or nonmutagenic. Criteria for mutagenicity is a response for the induction of maximum number of histidine (his^+) revertants over the dose range tested equaling 1.7 X or greater the historical background mutation frequency, indicating significant activity in the sample ($p < 0.01$). The various crude oils from different in situ processes (Occidental, Geokinetics, and Rio Blanco) all show weak but significant mutagenic activity. The 150 ton simulated MIS (LETC) oil, the coal derived medium distillate blend (SRCII) and the aboveground retort composite crude oil (PRHO 601) are strongly mutagenic, yet this activity in the latter oil can be completely eliminated by hydrotreatment.

30547 (LA—9479-PR, pp 68-71) **Light activation of oil shale retort process waters.** Strniste, G.F.; Chen, D.J.; Okinaka, R.T. Oct 1982. NTIS, PC A08/MF A01.

In Los Alamos Life Sciences Division's biomedical and environmental research programs. Progress report, January-December 1981.

Five drug-resistent markers have been employed to monitor mutagenesis induced in CHO cells by oil shale process water plus near ultraviolet light (nuv). Results indicate the sample of above ground retort process water was strongly mutagenic at all loci, whereas true in-situ retort process water was a weaker mutagen. Also both cytotoxicity and mutagenicity induced in CHO cells were examined after their exposure to aboveground retort process water and natural sunlight. (ACR)

30548 (LA—9479-PR, pp 71-73) **Light activation of natural and synthetic petroleums.** Strniste, G.F.; Bingham, J.M.; Chen, D.J.; Okinaka, R.T. Oct 1982. NTIS, PC A08/MF A01.

In Los Alamos Life Sciences Division's biomedical and environmental research programs. Progress report, January-December 1981.

This report summarizes data concerning nuv-induced cytotoxicity and mutagenicity in cultured Chinese hamster ovary (CHO) cells after treatment with dilutions of various natural or synthetic petroleums. The data indicate that significant mutagenicity occurs in cells exposed to high dilutions of certain synthetic crude oils and nominal exposure to nuv.

30549 (LA—9479-PR, pp 73-75) **Benzo(a)pyrene metabolism and mutation induction in CHO cells using either rat liver homogenate or Syrian hamster embryonic cell-mediated activation.** Okinaka, R.T.; Strniste, G.F.; Chen, D.J.C. Oct 1982. NTIS, PC A08/MF A01.

In Los Alamos Life Sciences Division's biomedical and environmental research programs. Progress report, January-December 1981.

A comparative study of B(A)P metabolism by rat liver homogenates (S9) and Syrian hamster embryonic (SHE) cells suggest that the S9 preparations possess a greater potential in removing cytotoxic and mutagenic species by conjugation mechanisms. A CHO mutation assay incorporating both activation systems to measure cytotoxic and mutagenic effects shows that SHE cells are moie efficient at inducing mutations in CHO than is the S9 preparation. The S9 preparations appear to convert B(a)P into a wider variety of moieties than does the intact hamster cell and possess more extensive conjugation mechanisms which preferentially remove the more mutagenic oxide molecules. (DLS)

30550 (LA—9479-PR, pp 88-90) **Sister chromatid exchange (SCE) analysis in bone marrow of mice treated with shale oils and shale process waters.** Meyne, J. Oct 1982. NTIS, PC A08/MF A01.

In Los Alamos Life Sciences Division's biomedical and environmental research programs. Progress report, January-December 1981.

Female Swiss mice were treated with three intraperitoneal injections of either shale oil diluted in olive oil or process water diluted in saline given at 24-h intervals. Mice were killed 4 h after the last injection. Detection of SCE was based on bromodeoxyuridine tablet methodology and a modified fluorescence plus Giemsa staining procedure. The PCSO sample induced dose-related increases in the frequency of SCE, but even at the 2-ml/kg dose this increase was only about 50% above the control level. At this dose, the frequency of structural aberrations was five times the control value. The PCSO-HT and OCSO samples demonstrated SCE frequencies within the control range at all doses tested. The results after treatment with the three process waters showed no increase in frequency of SCEs was observed, although the doses tested induced about a two-fold increase of structural aberrations. Therefore, it appears that structural aberration analysis is more sensitive than SCE analysis for evaluation of the types of DNA damage induced in murine bone marrow by shale oils and process waters.

30551 (LA—9479-PR, pp 90-92) **Sister chromatid exchange rates in geokinetics oil shale workers.** Campbell, E.W.; Ray, F.A.; Deaven, L.L. Oct 1982. NTIS, PC A08/MF A01.

In Los Alamos Life Sciences Division's biomedical and environmental research programs. Progress report, January-December 1981.

The sister chromatid exchange (SCE) assay applied to human peripheral lymphocytes is used to assess genetic damage to workers of the Geokinetics Inc. in situ oil shale retorting process

site in Utah. SCE rates on 29 individuals studied fell within normal ranges and future samplings from these workers and their families will provide information concerning an SCE rates change as a result of working and living in the environment. (DLS)

30552 (LA—9479-PR, pp 92-93) **Comparison of direct-acting cytogenetic and mutagenic effects of a shale oil retort process water.** Meyne, J.; Chen, D.J. Oct 1982. NTIS, PC A08/MF A01.

In Los Alamos Life Sciences Division's biomedical and environmental research programs. Progress report, January-December 1981.

Process water from an aboveground retort contains direct-acting mutagens which produce substantial mutagenic activity in 6-thioguanine-resistant (6-TG/sup R/) mutants of human embryonic skin fibroblasts. Less severe effects are observed in Chinese hamster ovary (CHO) cell mutants. Since many mutagenic agents are also clastogenic, researchers have compared the cytogenetic and mutagenic effects of this process water under the same experimental conditions. The CHO cells demonstrated significant, dose-related increases in the frequency of chromosomal breaks observed. The frequency of tetraploid cells was increased in both cell types but dose-related only in human fibroblasts. Although there is no quantitative correlation between mutation frequency and the frequency of either chromosomal breaks or tetraploid cells in cultures treated with process water, this study provides additional support to the hypothesis that many mutagens also induce chromosomal changes.

30553 (LA—9479-PR, pp 94-97) **Effects of prolonged inhalation exposure to oil shale dust.** Halleck, M.S.; Saunders, G.C.; Tate, E.H.; Stevenson, A.P.; Wilson, J.S.; Stewart, C.C.; Spall, W.D.; Martinez, A. Oct 1982. NTIS, PC A08/MF A01.

In Los Alamos Life Sciences Division's biomedical and environmental research programs. Progress report, January-December 1981.

The development of shale oil as an alternative energy source poses potential health hazards to those associated with the mining and milling of raw shales. Experiments designed to assess the extent of pulmonary damage from inhalation exposure to highly respirable forms of oil shale dusts are in progress. These experiments have provided the materials to develop assay systems to measure cellular and biochemical Parameters on fluids lavaged from control and inhalation-exposed animals as well as biochemical measures of damage to lung tissues. This report describes preliminary results on a small sample of animals obtained after exposure for 16 months to a heavy aerosol dose of raw Paraho shale.

30554 **Sulfur and nitrogen uptake by loblolly pine seedlings as influenced by nitrogen and sulfur addition.** Kelly, J.M. (Tennessee Valley Authority, Muscle Shoals, AL); Johnson, D.W. *Forest Science;* **28**: No. 4, 725-731(Dec 1982). Contract W-7405-ENG-26.

The influence of increasing levels of nitrogen addition at several levels of sulfur input on nitrogen and sulfur uptake by loblolly pine seedlings was evaluated in a greenhouse study. All possible combinations on nitrogen and sulfur were incorporated into soil collected from the A horizon of a southeastern forest soil at rates of 0, 200, 500, and 1,000 μg/g of N, and 0, 14, 35, and 70 μg/g of S. Soil samples collected at the end of the study indicated that a similar amount of soil SO_4-S had been mineralized in all treatment combinations, compared to a general pattern of increasing soil nitrogen mineralization with increasing nitrogen input. Most mineralized sulfate appeared to come from nonprotein organic compounds as there was not a significant concomitant release of nitrogen. Both shoot and root biomass responded significantly to nitrogen addition, but there was no sulfur or nitrogen-sulfur interaction response. Nitrogen treatment generally increased shoot nitrogen concentration compared to a general decrease in shoot total-, sulfate-, and organically bound-sulfur. Organically bound-sulfur concentrations were 26 to 60 percent below sulfur values calculated from an S/N ratio of 0.03 on a gram atom basis. The results show that increased nitrogen addition affected both growth and sulfur status of loblolly pine seedlings, but not entirely in the manner predicted by theoretical considerations.

30555 **Macromegakaryocytosis after hydroxyurea.** Ebbe, S. (Univ. of California, Berkeley); Phalen, E. *Proceedings of the Society for Experimental Biology and Medicine;* **171**: No. 2, 151-157(Nov 1982). Contract AC03-76SF00098.

A single injection of hydroxyurea (OHU) produced transient megakaryocytopenia in mice. An increase in the average mean size of mature, stage III megakaryocytes coincided with their depopulation. This was due to a selective reduction in numbers of smaller cells. In contrast, the macromegakaryocytosis of immunothrombocytopenia showed substantial increases in numbers of larger cells and reductions in smaller. Further reduction in numbers of smaller cells occurred when OHU was given to mice with immunothrombocytopenia, and the megakaryocytopenia was somewhat more severe than that produced by OHU in normal mice. OHU produced mild thrombocytopenia in normal mice and compromised recovery of the platelet count from immunothrombocytopenia. The most likely explanation for the increase in mean megakaryocyte size in the hypomegakaryocytic state produced by OHU is that the temporary imbalance between a low rate of influx and a normal rate of maturation produced a shift of the age distribution of the cells due to a deficiency of immature cells.

30556 **Effects of dewatering on chinook salmon redds: tolerance of four developmental phases to daily dewaterings.** Becker, C.D.; Neitzel, D.A.; Fickeisen, D.H. (Pacific Northwest Lab., Richland, WA). *Transactions of the American Fisheries Society;* **111**: No. 5, 624-637(Sep 1982). Contract AC06-76RL01830.

Four intergravel developmental phases of chinook salmon Oncorhynchus tshawytscha were dewatered experimentally in artificial redds. The redds consisted of aquaria containing a gravel mix and supplied with 4 liters of water per minute at 10 C. Cleavage eggs and embryos (the egg phases), and eleutheroembryos and pre-emergent alevins (the alevin phases) were dewatered 20 consecutive times in 22-day tests. The egg phases were considerably more tolerant than alevins. Some cleavage eggs were killed by 12- and 16-hour daily dewaterings, but embryos survived up to 22-hour daily dewaterings. Embryos also tolerated extended, multiple dewaterings (over 60% survival for four consecutive 118-hour periods) and one-time, continuous dewatering for up to 12 consecutive days (over 80% survival). In contrast, about half the eleutheroembryos were killed by 4-hour daily dewaterings, and nearly all pre-emergent alevins were killed by 1-hour daily dewaterings. Intergravel temperatures were affected by insolation and air temperature. Intergravel temperatures increased to lethal levels during dewatering of cleavage eggs in early fall, and limited their survival. Growth of egg phases from some females was retarded by dewatering, but this phenomenon was not consistent for all egg groups. The size of surviving eleutheroembryos decreased as the length of daily dewatering periods increased.

30557 **Dimethylnitrosamine demethylase activity in Drosophila melanogaster.** Waters, L.C.; Nix, C.E.; Epler, J.L. (Oak Ridge National Lab., TN). *Biochemical and Biophysical Research Communications;* **106**: No. 3, 779-785(15 Jun 1982). Contract W-7405-ENG-26.

A dimethylnitrosamine (DMN) demethylase with levels of activity comparable to that in uninduced rat liver was demonstrated in both larval and adult forms of the Hikone-R strain of Drosophila. A microsomal enzyme, it has many properties of a cytochrome P-450-containing mixed-function oxidase. Kinetic analysis indicates only a single enzyme with an apparent K/sub m/ of 10.5 mM DMN.

30558 **Cell-mediated mutagenicity in Chinese hamster V79 cells of dibenzopyrenes and their bay-region fluorine-substituted derivatives.** Hass, B.S. (Oak Ridge National Lab., TN); McKeown, C.K.; Sardella, D.J.; Boger, E.; Ghoshal, P.K.; Huberman, E. *Cancer Research;* **42**: 1646-1649(May 1982). Contract W-7405-ENG-26.

The polycyclic aromatic hydrocarbons dibenzo(a,i)pyrene and dibenzo(a,h)pyrene, each of which possesses two bay regions, and their bay-region difluorinated derivatives were tested for mutagenicity for ouabain and 6-thioguanine resistance in Chinese hamster V79 cells. Since V79 cells do not metabolize polycyclic aroma-

tic hydrocarbons, mutagenesis was tested in both the presence and the absence of golden hamster embryo cells capable of metabolizing polycyclic aromatic hydrocarbons. Neither of the dibenzopyrenes nor their fluorinated derivatives were mutagenic in the absence of the golden hamster embryo cells. In the presence of these cells (cell-mediated assay), both dibenzopyrenes were mutagenic, whereas the difluorinated derivatives, 2,10-difluorodibenzo(a,i)pyrene and 3,10-difluorobenzo(a,h)pyrene, either were inactive or exhibited (on a dose basis) a weak response. However, the mutagenicity of the dibenzopyrenes was eliminated when they were coincubated with 7,8-benzoflavone, a mixed-function oxidase inhibitor. The results suggest that metabolic oxidation of these polycyclic aromatic hydrocarbons at the bay region (presumably to diol-epoxides) is required for a mutagenic response in the cell-mediated assay.

30559 **Modulation of bleomycin cytotoxicity.** Moore, C.W. (Univ. of Rochester, NY). *Antimicrobial Agents and Chemotherapy;* **21**: No. 4, 595-600(Apr 1982). Contract AC02-76EV03490.

Lethal effects of a 75-μg/ml concentration (approximately 5 x 10^{-5} M) of bleomycin on stationary-phase haploid or diploid cells of the eucaryote Saccharomyces cerevisiae were negated in the presence of 0.05 M phosphate buffer (pH 7). High cell densities (2 x 10^8 cells per ml) further inhibited killing. Multiphasic survival curves resulting after treatments in deionized water (pH 6.7) suggested the presence of cells with differing susceptibilities either at the start of treatment periods or as a result of resistance which developed during exposure to antibiotic. To identify a delayed effect, prolonged lethal consequences of the action of bleomycin were investigated under liquid-holding conditions. Survival of untreated early-stationary-phase yeast cells was not significantly affected by incubation without antibiotic for 6 or 36 h in non-nutrient buffer or water. However, increased killing resulted after bleomycin-treated cells were incubated in the absence of bleomycin or buffer. Moreover, cells which had never been exposed to the antibiotic lost considerable colony-forming ability as a result of incubation with bleomycin-treated cells, indicating the efflux of bleomycin or a reaction product. The findings have implications for both experimental cell studies and cancer therapy, as well as for the chemical mechanisms by which a metal-bleomycin complex could cause killing.

30560 **Aspergillus nidulans: systems and results of tests for chemical induction of mitotic segregation and mutation. I. Diploid and duplication assay systems.** Kafer, E. (McGill Univ., Montreal, Canada); Scott, B.R.; Dorn, G.L.; Stafford, R. *Mutation Research;* **98**: 1-48(1982). Contract W-7405-ENG-26.

This review represents a critical summary of results from published investigations which analyze effects of chemicals on mitotic segregation in Aspergillus nidulans (covering mainly references of the period 1965-1978). On the basis of the test systems employed the evaluated publications fall into three groups. The first and largest group uses tests which identify effects of chemicals on the frequencies of homo- or hemizygous segregants in heterozygous diploids (14 papers). Such "segregants" arise from increased segregation, usually either by mitotic crossing-over, non-disjunction, malsegregation, or from semi-dominant mutations of various types, including lethals and chromosomal aberrations. The second group includes a few investigations which test for increases in the frequencies of recessive lethals or balanced translocations in treated diploids that are revealed by effects on the recovery of haploid second-order segregants (3 papers). The third group investigates effects on the frequencies of haploid sectors from duplication strains, that are affected by some chemicals and may be due to site-specific recombination or chromosome breakage (4 papers).

30561 **Operant behavior of rats exposed to lead before or after weaning.** Angell, N.F.; Weiss, B. (Univ. of Rochester, NY). *Toxicology and Applied Pharmacology;* **63**: 62-71(1982). Contract AC02-76EV03490.

Rats were exposed to lead (Pb) before or after weaning. For preweaning exposures, nursing dams received 0.2% Pb acetate(1090 ppm Pb) in drinking water. Offspring treated after weaning consumed the same concentration. Tapwater served as the control fluid. Pre-post treatments were distributed among four experimental groups of 10 rats each: tap water-tap water, Pb-tap water, tap water-Pb, Pb-Pb. Operant behavior training began on Postnatal Day 58. Animals performed on a multiple reinforcement schedule of food presentation consisting of fixed-interval, fixed-ratio, and time out components.Statistical analyses of experimental sessions 4 to 11 (Postnatal Days 72 to 79) revealed that postweaning exposure significantly lengthened the median interval (interresponse time) between consecutive responses on both the interval and ratio schedules. Preweaning exposure alone tended to produce a shortening of the median interresponse time. Other performance indices and subsequence variations of ratio size showed similar but not significantly different relationships among the treatment groups. No significant histopathology was detected. Brain and blood Pb concentrations were consistent with the treatment protocol.

30562 **Fetal distribution of mercury following introduction of methylmercury into porcine maternal circulation.** Kelman, B.J.; Walter, B.K.; Sasser, L.B. (Comparative Animal Research Lab., Oak Ridge, TN). *Journal of Toxicology and Environmental Health;* **10**: 191-200(1982).

Tissue samples were obtained from 115 swine fetuses from 10 litters and analyzed for tissue-bound Hg 24 h after mothers were exposed to low levels of methylmercury by iv injection. Absorption of Hg by the fetus and placenta increased throughout gestation in concert with increasing fetal weight, as did fetal hepatic Hg. Fetal renal Hg increased throughout gestation, but the increase appeared to be much greater than would be expected on the basis of weight increase alone. Blood Hg concentrations did not change significantly. Fetal brain Hg content and concentration increased dramatically toward the end of pregnancy, the gestational period during which the rate of brain growth is greatest in swine. The finding that a period of increased Hg concentration in brain corresponded with the period of maximal brain growth velocity is particularly interesting because of the hypothesis that the brain is especially sensitive to nutritional and, presumably, toxicological perturbation while it is growing most rapidly.

30563 **Acute and genetic toxicity of 1-nitropyrene and its fate after single oral doses to rats.** Marshall, T.C.; Royer, R.E.; Li, A.P.; Kusewitt, D.F.; Brooks, A.L. (Lovelace Inhalation Toxicology Research Inst., Albuquerque, NM). *Journal of Toxicology and Environmental Health;* **10**: 373-384(1982). Contract AC04-76EV01013.

The mammalian acute and genetic toxicity of 1-nitropyrene (NP) was studied because this and other nitroarenes are highly mutagenic toward bacteria and have been identified in emissions from combustion processes. A suspension of NP did not cause observable signs of acute toxicity and was not lethal when administered to male and female rats at single oral doses as high as 5.0 g/kg. Histological examination of stomach, intestine, lung, heart, spleen, pancreas, adrenal, and kidney from rats euthanized at 4 and 14 d after treatment revealed no detectable differences from control rats. Urine and feces were collected for 4 d after treatment with 5.0 g/kg. About 70% of the dose was present in the feces as NP, and about 2% was present as the reduced metabolite 1-aminopyrene (AP). Sulfate and glucuronide conjugates of AP were present in small amounts (<1%) in the urine, showing that at least some of the dose was absorbed. Bone marrow cells from female rats given NP orally at 0.5, 1.5, and 5.0 g/kg showed a slight dose-related increase in the frequency of sister chromatid exchanges. Both NP and AP showed low mutagenicity in Chinese hamster ovary cells in vitro. Evidence of reductive metabolism of NP in rats raises concern about the potential exposure of humans to this compound. However, the weak in vivo and in vitro genetic toxicity of NP at high dose levels in mammalian systems suggests that the potential hazard may not be as high as predicted from bacterial mutagenicity data.

30564 **Sister chromatid exchange, DNA repair, and single-gene mutation.** Carrano, A.V.; Thompson, L.H. (Lawrence Livermore National Lab., CA). *UCLA Symposia on Molecular and Cellular Biology, New Series;* 441-447(1982). Contract W-7405-ENG-48.

Sister chromatid exchange (SCE) has been studied in cultured mammalian cells with regard to the nature of the inducing lesion, mutation induction, and factors that modify the observed

frequency following mutagen exposure, SCEs can be induced by a wide spectrum of DNA lesions and, for nine agents examined, the frequency of induced SCE is linearly related to induced single-gene mutation. Further, a deficiency in DNA repair may alter the expression of both SCE and mutation in a qualitatively similar manner. The frequency of SCE induced by mitomycin-C is suppressed in heterochromatic relative to euchromatin and, in nondividing lymphocytes, the lesions leading to the formation of SCEs may persist for several months.

30565 **Food additives and environmental chemicals as sources of childhood behavior disorders.** Weiss, B. *Journal of the American Academy of Child Psychiatry;* **21**: 144-152(1982). Contract AC02-76EV03490.

The Feingold hypothesis postulates that many children who exhibit disturbed behavior improve on a diet devoid of certain food additives. Its validity has been examined on the basis of controlled trails. The total evidence, although not wholly consistent, nevertheless suggests that the hypothesis is, in principle, correct. Such a conclusion poses difficult problems and new issues for etiology, treatment, toxicology, and regulation.

30566 **In vitro cytotoxicity and genotoxicity of dibutyltin dichloride and dibutylgermanium dichloride.** Li, A.P.; Dahl, A.R.; Hill, J.O. (Lovelace Inhalation Toxicology Research Inst., Albuquerque, NM). *Toxicology and Applied Pharmacology;* **64**: 482-485(1982). Contract AC04-76EV01013.

The cytotoxicity and genotoxicity of dibutyltin dichloride (DBTC) and dibutylgermanium dichloride (DBGC) were studied with in vitro tests. DBTC was approximately 1000-fold higher in cytotoxicity and genotoxicity than DBGC. Both compounds decreased the antibody production by lymphocytes in vitro at noncytotoxic doses, which may explain the immunosuppressive effect of the compounds in vivo. Both compounds induced mutation in Chinese hamster ovary cells, therefore suggesting that they are potentially carcinogenic.

30567 **Distribution and retention of benzo(a)pyrene in rats after inhalation.** Mitchell, C.E. (Lovelace Biomedical and Environmental Research Inst., Albuquerque, NM). *Toxicology Letters;* **11**: 35-42(1982). Contract AC04-76EV01013.

Tritium levels in tissues of rats were determined after inhalation of tritiated benzo(a)pyrene (^{3}H-BaP; 500 μg/1; activity mass median diameter, 1-2 μm) for 1 h. Significant amounts of radioactivity were found in the nasal turbinates, trachea, larynx, lungs, tracheobronchial lymph nodes, kidneys, and liver immediately after exposure. Lower concentrations of radioactivity were found in the brain, testes, and spleen. Clearance of radioactivity from the respiratory tract occurred in two phases; a rapid phase where 50% of the radioactivity cleared by ~ 2 h, and a slower phase that continued for about 2 days after exposure. Radioactivity in the brain, testes, and spleen remained at about the same level during the first day after exposure and then decreased slightly during the second day. Benzo(a)pyrene inhaled in this particulate form was rapidly solubilized, translocated to internal organs, and excreted primarily in feces.

30568 **Deposition, retention, and biological fate of inhaled benzo(a)pyrene adsorbed onto ultrafine particles and as a pure aerosol.** Sun, J.D.; Wolff, R.K.; Kanapilly, G.M. (Lovelace Biomedical and Environmental Research Inst., Albuquerque, NM). *Toxicology and Applied Pharmacology;* **65**: 231-244(1982). Contract AC04-76EV01013.

The effect of ultrafine, airborne, carrier particles on the deposition, retention, and biological fate of inhaled polycyclic aromatic hydrocarbons (PAHs) was studied. Using a radiolabeled model PAH, [^{3}H]benzo(a)pyrene ([^{3}H]BaP), Fischer-344 rats were exposed by nose-only inhalation (30 min) to this compound, as a coating (15% by mass) on insoluble $^{67}Ga_2O_3$ particles or as a pure aerosol. These aerosols were produced by vapor condensation methods in a dynamic aerosol generation system. The concentrations of [^{3}H]BaP in the coated and homogeneous aerosols were 0.6 and 1.0 μg/liter of air, respectively, while the mass median diameter of both these aerosols was approximately 0.1 μm. Pulmonary retention of ^{3}H radioactivity was longer in animals exposed to the [^{3}H]BaP coated on the $^{67}Ga_2O_3$ particles. The time required to clear 90% of the initial lung burden of $^{67}Ga_2O_3$-associated ^{3}H radioactivity detected 30 min postexposure was approximately 1 day as compared to 4 hr for animals ex Tracheal clearance of 90% of the $^{67}Ga_2O_3$-associated ^{3}H radioactivity required 1 day, while only 1.5 hr were required to clear the same percentage of ^{3}H radioactivity from the tracheas of rats exposed to the pure [^{3}H]BaP aerosol. The rates of clearance of this ^{3}H material to other tissues suggested that a substantial amount of the [^{3}H]BaP coated on $^{67}Ga_2O_3$ was cleared from lungs by mucociliary clearance and subsequent ingestion, whereas the majority of the pure [^{3}H]BaP aerosol was cleared by direct absorption into blood. In both cases, the ultimate fate of the majority of the [^{3}H]BaP and its metabolites was excretion in feces.

30569 **Benzo[a]pyrene metabolites: formation in rat liver cell-culture lines, binding to macromolecules, and mutagenesis in V79 hamster cells.** Selkirk, J.K.; MacLeod, M.C.; Kuroki, T.; Drevon, C.; Piccoli, C.; Montesano, R. (Oak Ridge National Lab., TN). *Carcinogenesis (New York);* **3**: No. 6, 635-639(1982). Contract W-7405-ENG-26.

Benzo[a]pyrene was metabolized in liver cell lines derived from BD-IV and BD-VI rats which included several chemically-transformed lines (IAR-6-1; IAR-19; IAR-28), one spontaneous transformant (IAR-27) as well as one nonmalignant line (IAR-20). Cultures were treated with tritiated benzo[a]pyrene over a 5-day period. The cells and medium were extracted with ethyl acetate and the distribution between organic-soluble and water-soluble metabolites determined. Organic-soluble metabolites consisting of dihydrodiols, phenols and quinones were determined by high-pressure liquid chromatography, and macromolecular binding of BP to each cell line was measured over a 24-h period. Comparisons between binding and overall metabolism were not directly proportional in these liver cell lines. However, there was a positive correlation for benzo[a]pyrene mutagenesis in the V-79 hamster cell assay with 8-azaguanine as a marker when the cell lines with the highest (IAR-20) and lowest (IAR-27) metabolic competence were used as activating cell layers.

30570 **Time course of metabolish of benzo[e]pyrene by hamster embryo cells and the effect of chemical modifiers.** Macleod, M.C.; Mansfield, B.K.; Selkirk, J.K. (Oak Ridge National Lab., TN). *Chemico-Biological Interactions;* **40**: 275-285(1982). Contract W-7405-ENG-26.

In cultures of hamster embryo cells, benzo[a]pyrene(B[a]P) is metabolized promarily in the bay region. In contrast, little or no bay region metabolism of the noncarcinogenic isomer benzo[e]pyrene (B[e]P) could be detected during 12 to 96 h incubations of hamster embryo cells with 4μM[^{3}H]B[e]P: The upper limit to 9,10-dihydro-9,10-dihydroxy-B[e]P formation is about 0.2% of the ethyl acetate-soluble metabolites)<0.1% of the total metabolites). The major identified metabolites of B[e]P were 4.5-dihydro-4,5-dihydroxy B[e]P and the glucuronide conjugates of 3-OH-B[e]P and 4,5-dihydro-4,5-dihydroxy B[e]P. Simultaneous treatment of cells with either B[a]P or 7,8-benzoflavone (BF) did not induce bay region metabolism of [^{3}H]B[e]P.

30571 **Cytochrome P-450 dependent monooxygenase activity in rat nasal epithelial membranes.** Hadley, W.M.; Dahl, A.R. (Inhalation Toxicology Research Inst., Albuquerque, NM). *Toxicology Letters;* **10**: 417-422(1982). Contract AC04-76EV01013.

Cytochrome P-450 was found in nasal epithelial membranes (NEM) of the rat. The quantity was 12% that of liver on a per mg of microsomal protein basis and 1.6 times that of the lung on the same basis. Metabolism of p-nitroanisole was faster by microsomes from NEM than by microsomes from liver or lungs while the metabolism rate of aniline by microsomes from NEM was between that of microsomes from liver and lung.

30572 Acute toxicity of polyethylene glycol p-isooctylphenol ether in Syrian hamsters exposed by inhalation or bronchopulmonary lavage. Damon, E.G. (Inhalation Toxicology Research Inst., Albuquerque, NM); Halliwell, W.H.; Henderson, T.R.; Mokler, B.V.; Jones, R.K. *Toxicology and Applied Pharmacology;* **63**: 53-61(1982). Contract AC04-76EV01013.

Dose-response studies were conducted with Syrian hamsters exposed to polyethylene glycol p-isooctylphenyl ether (Triton X-100) via inhalation or bronchopulmonary lavage. Syrian hamsters were exposed to an aerosol of Triton X-100 with a mass median aerodynamic diameter of 1.5 μm and a concentration of 3.0 mg/liter. Estimated initial lung burdens of Triton X-100 ranged from 800 to 3100 μg. Hamsters were lavaged with concentrations of Triton X-100 ranging from 0.01 to 0.10% in isotonic saline resulting in initial lung burdens of Triton X-100 that ranged from 300 to 3200 μg. The LD50/7 values were 1700 μg (1300 to 2100 μg, 95% confidence limits) for the inhalation study and 2100 (1900 to 2700) μg for the lavage study. The difference between the LD50/7 values for the two methods of exposure was not significant. However, histopathological examination revealed differences in the nature and distribution of pathologic changes observed in animals exposed by the two routes of administration. Animals exposed by inhalation died as a result of ulcerative laryngitis and laryngeal edema with only minimal pulmonary pathologic alterations. Animals exposed by lavage, where the larynx was not exposed to Triton X-100, died from pulmonary edema and acute exudative pneumonia. These results demonstrate the need for careful selection of exposure methods to meet the specific objectives of a toxicology study.

30573 In vivo sister-chromatid exchange assay in the larvae of the mussel Mytilus edulis; response to 3 mutagens. Harrison, F.L.; Jones, I.M. (Lawrence Livermore National Lab., CA). *Mutation Research;* **105**: 235-242(1982). Contract W-7405-ENG-48.

An in vivo sister-chromatid exchange (SCE) assay using the larvae of the mussel Mytilus edulis was developed. Larvae were exposed to mutagens beginning 12 h after fertilization and harvested 12 h later in the late trochophore stage. Dose responses to the mutagens bromodeoxyuridine, mitomycin C and methyl methanesulfonate were linear. The sensitivity of the SCE response of mussel larvae to these mutagens compares favorably with that of other systems and indicates this assay to be valuable in marine genetic toxicological monitoring.

30574 Dissolution half-times of nickel compounds in water, rat serum, and renal cytosol. Kuehn, K.; Sunderman, F.W. Jr. (Univ. of Connecticut School of Medicine, Farmington). *Journal of Inorganic Biochemistry;* 1-11(1982). Contract AC02-76EV03140.

Seventeen nickel compounds were incubated in water, rat serum, and rat renal cytosol for 72 hr at 37°C. Concentrations of dissolved nickel were analyzed by electrothermal atomic absorption spectrophotometry, and dissolution half-times (T50) were computed by the Weibull equation. Eleven of the nickel compounds (Ni, βNiS, amorphous NiS, αNi_3S_2, NiSe, Ni_3Se_2, NiTe, NiAs, $Ni_{11}As_8$, Ni_5As_2, and $NiFeS_4$) dissolved more rapidly in serum or cytosol than in water. Four of the compounds (NiO, NiSb, NiFe alloy, and $NiTiO_3$) had no detectable dissolution in any of the media (i.e., T50 > 11 yr). One compound (NiAsS) had approximately equal T50 values in the three media; the T50 value of one compound (NiS_2) could not be determined in serum or cytosol owing to precipitation. T50 values of 34 and 21 days for dissolution of αNi_3S_2 in serum and cytosol, respectively, agree closely with the excretion half-time of 24 days derived from previously reported data for excretion of ^{63}Ni in urine and feces of rats after intramuscular injection of $\alpha^{63}Ni_3S_2$. These findings suggest that in vitro dissolution half-times of nickel compounds may be used to predict their in vivo excretion half-times, since the dissolution process is rate-limiting to their metabolism and excretion.

30575 Mutagenicity of 4,4'-methylenedianiline derivatives in the Salmonella histidine reversion assay. Rao, T.K. (Oak Ridge National Lab., TN); Dorsey, G.F.; Allen, B.E.; Epler, J.L. *Archives of Toxicology;* **49**: 185-190(1982). Contract W-7405-ENG-26.

4,4'-Methylenedianiline and its derivatives were assayed for mutagenicity in the Salmonella/microsomal mutagenicity assay developed by Ames. A specificity to revert strain TA98 suggests a mechanism of frameshift mutagenesis. Liver microsomal preparations from rats induced with phenobarbital were most effective for metabolic activation. Alkyl substitution of 4,4'-methylenedianiline did not alter its mutagenic activity; however, substitution of both positions ortho to the amino group eliminated mutagenic activity. Substitutions with alkoxy-carbonyl groups eliminated mutagenic activity, whereas halogen substitution enhanced the mutagenic activity. The results presented here show the use of structure-activity studies as predictive tools for the assessment of genotoxic properties of industrial chemicals.

30576 Effects of copper on the latency of lysosomal hexosaminidase in the digestive cells of Mytilus edulis. Harrison, F.L.; Berger, R. (Lawrence Livermore National Lab., CA). *Marine Biology (Berlin);* **68**: 109-116(1982). Contract W-7405-ENG-48.

Mytilus edulis collected from Tomales Bay, California, USA, during mid-winter 1979 were exposed to increased concentrations of dissolved copper under controlled laboratory conditions. A dose-dependent reduction in the latency of lysosomal hexosaminidase activity in digestive cells was induced after a 30 d exposure to copper. The half-time of the hexosaminidase staining reaction in sections of digestive gland from control mussels was 15.5 min; for mussels exposed to 25, 50, and 75 μg Cu l^{-1} it was 11.8, 8.5, and 5.5 min, respectively. In addition, the dye-coupled reaction product was seen earlier in sections from individuals exposed to 50 and 75 μg Cu l^{-1} (after 30 s) and 25 μg Cu l^{-1} (1 min) than in sections from control individuals (2.5 min). Copper accumulations were demonstrated histochemically to have the same distribution as the hexosaminidase reaction product, indicating that copper is sequestered in lysosomes. Copper concentrations in digestive gland tissue were related to the concentrations of copper in the water to which the mussels were exposed.

30577 Mutagenic and toxic activity of environmental effluents from underground coal gasification experiments. Timourian, H.; Felton, J.S.; Stuermer, D.H. (Lawrence Livermore National Lab., CA). *Journal of Toxicology and Environmental Health;* **9**: 975-994(1982). Contract W-7405-ENG-48.

Using bacterial bioassays, researchers have screened for the presence of mutagens and toxins in extracts from groundwater, and in tar from product gas, at the sites of two Lawrence Livermore National Laboratory (LLNL) in situ experiments: Hoe Creek II and Hoe Creek III. The sites exhibited different potential biological hazards, suggesting that different gasification processes may represent different human health concerns. Researchers found that mutagens are present in groundwater, persist for at least 2 yr after gasification has been terminated, and show a change in activity with time - possibly in parallel with changes in chemical composition. Preliminary evidence suggests that the mutagens in groundwater are quinoline and aniline derivatives, while the toxins in groundwater may be phenolic compounds. In tar from the product gas, the organic bases and neutrals were found to be genotoxic in both bacterial and mammalian cells; the neutral compounds appear to be the major mutagenic health hazards. Neutral compounds constitute most of the tar (85 to 97 wt %) and were mutagenic in both the bacterial and mammalian cell assays. Tar in the gas stream may be a problem for the aboveground environment if gas escapes through fractures in the overburden. Because it is mutagenic and induces chromosomal damage to mammalian cells, the tar may represent a disposal problem as well. However, it is difficult to assess tar quantitatively as a health hazard because its mutagenic activity is low, possibly due to contaminants in the neutral fraction that act to suppress mutagenicity.

30578 Structure-toxicity relationships of selected nitrogenous heterocyclic compounds II. Dinitrogen molecules. Schultz, T.W. (Oak Ridge National Lab., TN); Cajina-Quezada, M. *Archives of Environmental Contamination and Toxicology;* **11**: 353-361(1982). Contract W-7405-ENG-26.

Thirteen dinitrogen-containing cyclic compounds were examined to determine the relationship between selected structural and physicochemical parameters and impairment to population growth of the common ciliate Tetrahymena pyriformis. Under static conditions all compounds tested are persistent in aqueous solution. Both an increase in methyl substitution and an increase in the number of aromatic rings per compound result in increased growth impairment. Linear positive relationships exist between the log biological response values of the alkyl analog set and each of four hydrophobic indexes: number of carbon atoms, molecular weight, boiling point, and the log of the 1-octanol/water partition coefficient. No such relationships were found for isomers, for which the crowding of ring-substituted nitrogen has no effect on the number of carbon atoms and molecular weight but causes an increase in boiling point and biological response and a decrease in 1-octanol/water partition coefficient. In addition, linear positive correlations were demonstrated between the log of the absolute value of the slope of the population growth impairment equation of the alkyl analog set and each of the four hydrophobic parameters. Comparisons of log 1-octanol/water partition coefficients with log biological response or log slope of mononitrogen-substituted cyclic compounds show that similar correlations exist for both mono- and dinitrogen substitution.

30579 **Comparative structure-genotoxicity study of three aminoanthraquinone drugs and doxorubicin.** Au, W.W.; Butler, M.A.; Matney, T.S.; Loo, T.L. (Univ. of Texas, Houston). *Cancer Research;* **41**: 376-379(Feb 1981).

Two aminoanthraquinone analogs 1,4-bis[2-[(2-hydroxyethyl)amino]ethylamino)-9,10-anthracenedione (HAQ) and 1,4-dihydroxy-5,8-bis(2-[(2-hydroxyethyl)amino]amino]ethylamino]-9,10-anthracenedione (DHAQ) have been shown to possess similar therapeutic activities against experimental tumors but different toxicities to the animals. In this study, the genotoxic effects of these two drugs and a new analog, 1,4-dihydroxy-5,8-bis(2-[(2-hydroxethyl)amino]ethylamino]-9,10-anthracenedione diacetate, were analyzed by using mammalian cell cytogenetic assays (chromosome breakage and sister chromatid exchanges) as well as bacterial mutagenesis assays. The experimental therapeutic activities of these drugs in vivo correlated well with their in vitro genetic toxicities as revealed by cytogenetic assays. DHAQ was also more genotoxic than Adriamycin. In cytogenetic assays, the activities of all drugs were reduced to different degrees in the presence of a S-9 metabolic system. Discrepancies were observed between results obtained from cytogenetic assays and those from mutagenesis assays. Whereas DHAQ was most active in cytogenetic studies, Adriamycin was most mutagenic or toxic. HAQ was least active cytogenetically, and this activity was not changed appreciably in the presence of metabolic enzymes. However, it was metabolically activated to a bacterial mutagen.

30580 **(AD-A—122690/1) Basal body and striated rootlet changes in primate macular retinal pigmented epithelium after low level diffuse argon laser radiation. Final report 1981-1982.** Schuschereba, S.T.; Zwick, H.; Stuck, B.E.; Beatrice, E.S. (Letterman Army Inst. of Research, San Francisco, CA (USA)). Sep 1982. 22p. NTIS, PC A02/MF A01.

Basal bodies or centrioles (BB - microtubule organizing centers) and striated rootlets (SR - bundles of 60 A action-like filaments) have a close association in primate retinal pigmented epithelial (RPE) cells. The frequency of occurrence of these structures was evaluated in the macular RPE after repeated exposure to low level diffuse argon laser radiation (DALR). The awake chaired animal's head was restrained and positioned near the center of the 0.75 m hemisphere which was diffusely irradiated with 514.5 nm laser radiation. The right eye of each subject was occluded during the two-hour exposure session. The first subject received 24 cumulative hours of exposure, the second, 40 hours and the third, 42 hours.

30581 **(AD-A—122728/9) Annual research progress report, FY 1980. Annual report 1 Oct 79-30 Sep 80.** Marshall, J.D. (Letterman Army Inst. of Research, San Francisco, CA (USA)). 1 Oct 1980. 222p. NTIS, PC A10/MF A01.

During Fiscal Year 1980 progress was attained at the Letterman Army Institute of Research in the following research areas: Basic and applied studies on blood, blood products and blood substitutes; physiology of hemorrhagic shock, pharmacological intervention of shock; the determination of coherent radiation exposure thresholds causing damage to the eye, definition and treatment for laser injuries of the skin and eye; military stress and combat effectiveness; evaluation and toxicology of insect repellents; defense against chemical agents. The progress made in this fiscal year is described in the reports of the work units presented.

30582 (LA—9479-PR, pp 112-115) **Potassium ion influx measurements on cultured Chinese hamster cells exposed to 60-hertz fields.** Stevenson, A.P.; Tobey, R.A. Oct 1982. NTIS, PC A08/MF A01.

In Los Alamos Life Sciences Division's biomedical and environmental research programs. Progress report, January-December 1981.

Studies of the effects of 60-Hz electromagnetic fields (ELF) on the growth and survival of cultured Chinese hamster (line CHO) cells showed that cell growth over prolonged time periods is not affected by fields up to 2.85 V/m. These findings led to the search for a more sensitive parameter for measuring effects of such fields on cellular processes. The study of potassium ion influx was considered to be of particular importance in view of both the role of potassium ions in protein synthesis, a process necessary for cell growth and suvival, and the fact that the pumps responsible for transport of this ion into the cell are electrogenic, and therefore, perhaps sensitive to the effects of impinging fields. Additionally, measurement of K^+ influx in cultures of CHO cells exposed to hyperthermia (42°C) had demonstrated previously that changes in transport could be measured immediately (as early as one minute after treatment). Therefore, it was decided to investigate in CHO cells the effects of 60-Hz fields on K^+ influx.

30583 **(PB—83-155747) Nonionizing radiation 583.** (National Inst. for Occupational Safety and Health, Cincinnati, OH (USA)). Apr 1977. 574p. NTIS, PC A24/MF A01.

This document presents an introductory course on nonionizing radiation intended for industrial hygienists, health physicists, and other professional health personnel. Topics covered in the course include nonionizing radiation sources, the attendant hazards to personnel, and the basic principles of radiation control. The importance of evaluation and control of laser and microwave radiation sources is stressed. Course objectives are to enable the student to identify a nonionizing radiation source and the radiation emitted, determine the degree of hazard to exposed personnel, and to apply the necessary protective procedures to reduce or eliminate the hazard.

30584 **Effects of 60-Hz electric fields on specific humoral and cellular components of the immune system.** Morris, J.E.; Phillips, R.D. (Pacific Northwest Lab., Richland, WA). *Bioelectromagnetics (New York);* **3**: 341-347(1982). Contract AC06-76RL01830.

Humoral and cellular functions of the immune system of Swiss-Webster mice were evaluated after exposure to 60-Hz electric fields at 100 kV/m. No significant differences were observed in primary antibody response to keyhole limpet hemocyanin (precipitating antibody levels) between exposed (30 or 60 days) and control mice, nor were there significant changes in mitogen-stimulation response of spleen cells from mice similarly exposed for 90 or 150 days when compared to sham-exposed animals.

30585 **The influence of radiofrequency/microwave energy absorption on physiological regulation.** Michaelson, S.M. (Univ. of Rochester, NY). *British Journal of Cancer;* **45**: No. Suppl. V., 101-107(1982). Contract AC02-76EV03490.

Physiological regulation represented by thermoregulation, neuroendocrine function, neurochemical activity, and immune responses is a composite of exquisitely "tuned" interrelated systems

that constitute sensitive indicators of body responses to environmental stimuli or absorbed physical energies. Exposure to microwave/radiofrequency fields may affect such physiological regulation. Study of the integration and correlation of many body functions relative to the altered homoeostatic status of the microwave/radiofrequency-exposed subject is thus indicated. Microwave-induced physiological changes cannot be dissociated from increases in tissue temperature. Such responses are considered to be essential in defence against environmental changes as a febrile response is essential for host immune defence. These responses can also be considered to reflect the utilization of physiological function to maintain regulations or adjustments. These are not necessarily adverse reactions to environmental stimuli. These responses can be transient or persistent, beneficial or detrimental. Assessment of the integration and correlation of these functions relative to the thermal inputs and homoeokinetic reactions of the individual subjected to microwave/radiofrequency energy should permit differentiation between potential hazards which might compromise the individual's ability to maintain normal physiological function and effects which are compensated by physiological redundancy.

57 HEALTH AND SAFETY

30586 **(UCID—19758) Contingency plan for the Lawrence Livermore National Laboratory, Site 300, hazardous waste operations.** Gonzalez, M.A. (Lawrence Livermore National Lab., CA (USA)). 1 Apr 1983. Contract W-7405-ENG-48. 26p. NTIS, PC A03/MF A01. Order Number DE83010176.

This contingency plan for hazardous waste release provides guidance for coordinating response efforts. With a goal to minimize hazards to human health and life; and protect livestock, wildlife, the environment, and property in the event of a fire, explosion, or any unplanned release of hazardous substances or mixtures to the air, water, or soil. In this document, hazardous waste includes all waste substances or mixtures that: contain any of the hazardous substances listed in the Resource Conservation and Recovery Act; have the characteristic of being toxic, flammable, reactive, corrosive, an irritant, and/or a strong sensitizer; are radioactive and are used in experiments at Site 300; or could have a significant effect on the environment. This Plan includes an overview of emergency response capabilities; and responsibilities assigned to both LLNL and non-LLNL emergency response personel. (PSB)

30587 **(DOE/ET/12138—1275) Techniques and tests for measuring joint intensity.** Dixon, J.M. (West Virginia Univ., Morgantown (USA). Dept. of Geology and Geography). Dec 1979. Contract AC21-76ET12138. 148p. NTIS, PC A07/MF A01. Order Number DE83009587.

Anomalous intense jointing has been cited as a reason for gas production from fractured shales, coal mine roof falls, some construction problems, and increased water-well yields. The Parsons lineament in West Virginia, was chosen to develop and test field and analytical methods for measuring joint intensity. Rocks of the Middle and Upper Devonian Chemung Group and Catskill Formation, and the Mississippian Pocono Formation along the Allegheny Front, were studied to determine how the fracturing effects of the Petersburg lineament varies with depth and with different lithologies. In the Plateau province, rocks of the Lower and Middle Pennsylvanian Pottsville Group and Allegheny Formation were measured to determine the westward extent of the lineaments. A large roadcut in northern West Virginia was chosen to study the effects of a stream channel on coal cleat intensities. Joint spacing was found to be the only necessary measurement, other than strike and dip, to determine joint intensity. Rocks inside the Parsons and Petersburg lineaments were found to be more intensely jointed than rocks adjacent to the lineaments. Along the Allegheny Front, the Petersburg lineament affects rock at least one half mile below ground level. Farther west in the Plateau province, joint intensities measured indicate that the high-intensity joint systems of the Parsons and Petersburg lineaments are disrupted or terminated. Air photograph and LANDSAT lineaments may be an aid in locating structural lineaments or areas of intense jointing, but do not necessarily define or bound such areas.

30588 **(DOE/SR/01072—8) Geomorphic history of a portion of the Savannah River flood plain, Barnwell County, South Carolina.** Stevenson, A.E. (South Carolina Univ., Columbia (USA). Dept. of Geology). 1982. Contract AS09-78SR01072. 269p. NTIS, PC A12/MF A01. Order Number DE83009014.

Portions are illegible in microfiche products; Thesis.

As a result of an intensive archeological survey undertaken on the Plant, the Savannah River Valley has become the focus of an effort to tie the history of the Savannah River with cultural trends observed in the surrounding highlands. The flood-plain swamp contains well-preserved remnant sedimentologic evidence of former Savannah River occupations. This study utilizes geomorphic detail obtained from low level infra-red aerial photographs of the Savannah River flood plain in the area to interpret and distinguish various types of alluvial depositional environments. Relative temporal succession of the Savannah River across the modern (Holocene) valley floor is determined by evaluation of fluvial trends and their cross-cutting relationships. Sampling of sedimentary deposits for general alluvial stratigraphy and radiocarbon dating of plant detritus determine geomorphic trends and their absolute temporal relationships.

30589 **(NUREG/CP—0030) Symposium on unsaturated flow and transport modeling.** Arnold, E.M.; Gee, G.W.; Nelson, R.W. (eds.). (Pacific Northwest Lab., Richland, WA (USA)). Sep 1982. Contract AC06-76RL01830. 330p. (CONF-820364—; PNL-SA—10325/P). NTIS, PC A15/MF A01 - GPO $9.00. Order Number DE83001612.

From Symposium on unsaturated flow and transport modeling; Seattle, WA, USA (23 Mar 1982).

This document records the proceedings of a symposium on flow and transport processes in partially saturated groundwater systems, conducted at the Battelle Seattle Research Center on March 22-24, 1982. The symposium was sponsored by the US Nuclear Regulatory Commission for the purpose of assessing the state-of-the-art of flow and transport modeling for use in licensing low-level nuclear waste repositories in partially saturated zones. The first day of the symposium centered around research in flow through partially saturated systems. Papers were presented with the opportunity for questions following each presentation. In addition, after all the talks, a formal panel discussion was held during which written questions were addressed to the panel of the days speakers. The second day of the Symposium was devoted to solute and contaminant transport in partially saturated media in an identical format. Individual papers are abstracted.

30590 (NUREG/CP—0030, pp 3-34) **Recent developments in modeling variably saturated flow and transport.** Lappala, E.G. (Ertec Western, Inc., Long Beach, CA). Sep 1982. NTIS, PC A15/MF A01 - GPO $9.00.

From Symposium on unsaturated flow and transport modeling; Seattle, WA, USA (23 Mar 1982).

Portions are illegible in microfiche products.

Analysis of the movement of liquid and gaseous contaminants through variably saturated porous media under field situations is increasingly being required as part of the design and siting of waste-disposal facilities. Simulation of mass and energy transport in variably saturated media has increased recently because of the development of numerical and quasianalytic solution methods and computer codes to solve the nonlinear, coupled transport equations. Numerical models are available to solve a wide range of multi-dimensional, multiphase transport problems. Most numerical difficulties have been addressed in a satisfactory manner by the use of appropriate methods for spatial and temporal discretization, linearization and matrix solution. However, cetain aspects of transport under variably saturated conditions presently make routine application of models to field problems difficult. These are currently being

addressed and include: (1) incomplete theory of transport processes are exemplified by transport in multidimensional, multiple porosity systems; (2) difficulty and expense of in situ determination of the nonlinear transport parameters; (3) inadequate understanding of the spatial variability of transport parameters, particularly for natural, non-agricultural situations; and (4) difficulty in simulating phenomena having a wide range of required temporal and spatial detail. Modeling of unsaturated flow and transport is discussed in the context of present capabilities and those areas in which effort is needed to assure consistent methodologies for simulating problems in the detail required for planning and design of waste-disposal facilities. 100 references.

Ground-water flow models have proved to offer significant advantages over more traditional methods of analysis in most nontrivial problems. Models appear particularly helpful for field-scale applications when most of the assumptions on which analytical solutions are based, such as material homogeneity, one-dimensionality, and regular geometry, cannot be justified. In the case of saturated flow, there exists many successful field-scale simulations. In the case of unsaturated flow, however, the use of models is complicated by several problems including mesh selection and the lack of data in the unsaturated zone. The purpose of this paper is thus to discuss some of the questions to be resolved when applying unsaturated flow models to field-scale simulations. Two case studies are used to illustrate the discussion: one deals with the analysis of flow through a pile of solid waste materials produced by a coal-burning utility; the other deals with the analysis of potential seepage at the site of a proposed coal gasification plant.

30592 (NUREG/CP—0030, pp 55-75) **Coupled heat and moisture transport in unsaturated soils.** Childs, S.W. (Oregon State Univ., Corvallis). Sep 1982. NTIS, PC A15/MF A01 - GPO $9.00.

From Symposium on unsaturated flow and transport modeling; Seattle, WA, USA (23 Mar 1982).

Portions are illegible in microfiche products.

It has long been recognized that heat and moisture transport are coupled in porous media. Coupled transport effects on water flow are of importance in near surface agricultural situations. The theory will also be very important for applications involving either storage or disposal of thermal energy in porous media. The value and limitations of the most commonly used formulation of coupled transport theory is reviewed here. Also the effect of temperature on transport coefficients is demonstrated and example properties are given for several soil materials.

30593 (NUREG/CP—0030, pp 77-93) **Influence of climatic parameters on movement of radionuclides in a multilayered saturated-unsaturated media.** Gureghian, A.B. (Battelle Office of Nuclear Waste Isolation, Columbus, OH). Sep 1982. NTIS, PC A15/MF A01 - GPO $9.00.

From Symposium on unsaturated flow and transport modeling; Seattle, WA, USA (23 Mar 1982).

Portions are illegible in microfiche products.

A numerical analysis of the influence of climatic parameters on the movement of a typical radionuclide, Ra-226, in the profile of an inactive uranium mill tailings impoundment is reported. Two scenarios of meteorological events assumed to characterize the lower and upper bounds of potential Ra-226 migration rates are investigated. The first duplicates the true climatological conditions prevailing at the site of interest where evaporation is in excess of rainfall. The second is a hypothetical case in which the annual evaporation balances the rainfall. The fluctuations over time of these surface fluxes are simulated by simple harmonic functions. The model is composed of two modules: The first to calculate the pressure distribution in the domain of interest, enabling one to compute the velocities and soil moisture; the second to calculate the migration of the various species by taking into account all the major processes associated with the transport phenomena of a dissolved substance in porous media, i.e., advection, mechanical dispersion, molecular diffusion, radioactive decay and sorption (assuming a linear equilibrium isotherm). The numerical method of solving the one-dimensional transport of water and Ra-226 in the non-homogeneous soil system under saturated-unsaturated and isothermal conditions as adopted here is the finite-element method based on the weighted residual techniques. The flow equation is solved by the Bubnov-Galerkin method in which the weighting functions are identical to the linear basis functions. The solute equation is solved by a Petrov-Galerkin type method in which the convective and dispersive terms are weighted with asymmetric quadratic functions yielding an upstream weighting of the convection term. A test case involving the movement of a non-reacting ionic species in an actual field experiment is used to validate the model.

30594 **(PB—82-255589) Perspectives in geology. Circular 525.** (Illinois State Geological Survey, Champaign (USA)). 1982. 68p. (CONF-8010132—). NTIS.

From 75th anniversary of the Illinois State Geological Survey symposium; Urbana, IL, USA (9 Oct 1980).

The papers in this symposium present diverse perspectives in geology, mineral resources, paleontology, and environmental concerns. Papers within the scope of EDB have been entered individually into the data base. (ACR)

30595 **(RHO-BW-CR—133P) Report on geologic remote sensing of the Columbia Plateau.** Sandness, G.A.; Kimball, C.S.; Schmierer, K.E.; Lindberg, J.W. (Pacific Northwest Lab., Richland, WA (USA)). May 1982. Contract AC06-77RL01030. 360p. (PNL—3140). NTIS, PC A16/MF A01. Order Number DE83010201.

Portions are illegible in microfiche products.

The purpose of this remote sensing study is to identify faults or other geologic features which may have a significant bearing on the structural and tectonic character of the Hanford Site and the surrounding region. Landsat imagery, Skylab photographs, and U-2 photographs were analyzed to identify and map geologic photolineaments in the Columbia Plateau. The Landsat and Skylab imagery provided a regional perspective and allowed the identification of large-scale linear features. The U-2 photography provided much greater spatial resolution as well as a stereoscopic viewing capability. This allowed identification of smaller structural or geologic features and the identification of many cultural and nongeologic lineaments detected in the Landsat and Skylab imagery. The area studied totals, approximately 85,000 square miles, and encompasses virtually all exposures of Columbia River Basalt in the states of Washington, Oregon, and Idaho. It also includes an area bordering the Columbia River Basalt outcrop. This border area was studied in order to identify significant structures that may extend into the plateau. Included are a description of the procedures used for image analysis, 20 lineament maps at a scale of 1:250,000, geological summaries for the areas covered by the lineament maps, and discussions of many of the lineaments shown on the maps. Comparisons of the lineament maps with available geologic maps showed that the number of detected lineaments was much greater than the number of known faults and other linear features. Approximately 70% of the faults shown on the geologic maps were detected and are characterized as lineaments. Lineament trends in the northwest-southeast and northeast-southwest directions were found to predominate throughout the study area.

30596 **(SAND—79-0271) Basic data report for Drillhole ERDA 10 (Waste Isolation Pilot Plant - WIPP).** (Sandia National Labs., Albuquerque, NM (USA); D'Appolonia Consulting Engineers, Albuquerque, NM (USA)). Feb 1983. Contract AC04-76DP00789. 179p. NTIS, PC A09/MF A01. Order Number DE83010296.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

Borehole ERDA 10 was drilled to obtain information on possible dissolution of halite within the Castile Formation and on the hydrologic characteristics of the fluid-bearing zones in the Bell Canyon Formation. The borehole is located in Section 34, T23S,R30E in southern Eddy County, New Mexico. ERDA 10 was drilled to a depth of 4431.5 ft. Cores from the Castile were taken to obtain direct information which was supplemented by geophysical

logging. Based on preliminary analysis of the data, the ERDA 10 stratigraphic section is interpreted as a sequence of sandstones, siltstones, claystones, and evaporites normal for the area. No evidence of dissolution of significant amounts of halite was observed.

30597 **(SAND—83-0210) Hydrogeochemical parameters of fluid-bearing zones in the Rustler and Bell Canyon formations: Waste Isolation Pilot Plant (WIPP), southeast New Mexico (SENM).** Gonzalez, D.D. (Sandia National Labs., Albuquerque, NM (USA)). Mar 1983. Contract AC04-76DP00789. 33p. NTIS, PC A03/MF A01. Order Number DE83010418.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

The data contained herein are a compilation of hydrogeochemical information collected by the US Geological Survey and Sandia National Laboratories in support of the proposed WIPP facility. These data have been collected as a result of field operations ongoing since 1976 and are a result of extensive observations made at 24 locations. Hydraulic testing, chemical analysis, and geophysical logging have been performed in the water-bearing zones of the Rustler and Bell Canyon Formations. Transmissivities in these zones vary within nine orders of magnitude, and total dissolved solids range from a few thousand to 400,000 mg/L throughout the study area. The hydraulic data, for the most part, represent confined water-bearing horizons that range from stratigraphic contacts to 30 ft in thickness. Due to the low productivity, these zones would not be classified as aquifers anywhere else in the world. Wells within a 2-mi radius of the site and in the general SE direction of flow of the dominant aquifer in the Rustler (the Culebra Dolomite) yield no more than 0.2 gal/min over an extended period of pumping.

30598 **(SAND—83-0461) Dissolution of evaporites in and around the Delaware Basin, southeastern New Mexico and west Texas.** Lambert, S.J. (Sandia National Labs., Albuquerque, NM (USA)). Mar 1983. Contract AC04-76DP00789. 92p. NTIS, PC A05/MF A01. Order Number DE83011029.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

permian evaporites in the Ochoan Castile, Salado, and Rustler Formations in the Delaware Basin of southeast New Mexico and west Texas have been subjected to various degrees of dissolution (notably of halite and gypsum) through geologic time. Eastward tilting of the Delaware Basin has resulted in the exhumation and erosion of Ochoan rocks in the western part of the basin. Waters in the Capitan, Rustler, Castile, and Bell Canyon Formations have previously been proposed as agents or consequences of evaporite dissolution according to four principal models: solution-and-fill, phreatic dissolution, brine density flow, and stratabound dissolutin (along bedding planes). Several geomorphological features of positive and negative relief have previously been cited as indicators of evaporite dissolution. Brine density flow has been used to explain the selective dissolution of certain evaporite horizons during the late Cenozoic. A review of available geological data has revealed that: Halite deposition was probably not so extensive as formerly believed. Waters with potential to dissolve evaporites are in the Rustler and Capitan, but not in the Bell Canyon, Salado mine seeps, or the Castile brine reservoirs. Brine density flow has not been active in removing most of the missing halite, nor are point-source dissolution features likely to have their roots at the Bell Canyon. Major evaporite dissolution has not been confined to the late Cenozoic, but much of it took place during the Permian, Triassic, Jurassic, and Tertiary periods. The Bell Canyon Formation has been a sink for dissolution-derived brine.

30599 **(UCID—19769) Regional Seismic Test Network site descriptions.** Taylor, S.R.; Qualheim, B.J. (Lawrence Livermore National Lab., CA (USA)). 17 Mar 1983. Contract W-7405-ENG-48. 81p. NTIS, PC A05/MF A01. Order Number DE83010180.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

Each of the five Regional Seismic Test Network sites (RSTN) are characterized in terms of their geological and geophysical setting. The geology section includes a description of the regional geology and a detailed account of the geology in the immediate station vicinity. Stratigraphic columns and geophysical well-logs of the seismometer hole are also presented when available. The geophysics section for each site is divided into velocity structure and Q, regional seismicity and tectonics, and noise characteristics. Much of the information is derived from a literature review. However, when available, data have been analyzed from seismic stations at or near the sites and from preliminary analysis of actual RSTN data.

Separate sections of the report deal with the development of a field data acquisition and processing system for use in exploration geophysics, analysis of seismic data from the Imperial Valley, California, and from Mt. Etna, and the genesis and geochemistry of uranium ore deposits in bogs in the Serra Nevada. (ACR)

30601 **(IFP—30-112) Interpolation and transformation of maps.** Mari, J.L. (Institut Francais du Petrole (IFP), 92 - Rueil-Malmaison; Paris-6 Univ., 75 (France)). Jun 1982. 182p. (In French). NTIS (US Sales Only), PC A09/MF A01. Order Number DE83750442.

Portions are illegible in microfiche products; Thesis.

The purpose of this study is to present some mathematical and data processing for the simple, rapid processing and transformation of gravimetric and magnetic maps. The function of processing is to facilitate interpretation. It is supposed to make it possible to 'identify the geological objectives sought, without giving rise to fictitious events'. Hence the frequency content of the data must be retained and the generation of spurious frequencies must be avoided as much as possible. Two processing phases may be distinguished: - the first consists of homogenizing the values obtained in different recording conditions, - the second is more directly intended to help interpretation: in this second phase, an attempt is made to improve the quality of the documents by applying a set of carefully selected filters. Among these very special filters, the most widely used transformations are of three types: - prolongations, - derivations or vertical integrations, - reduction to the pole, for magnetism only. Initially, the quantitative aspect of these different transformations is examined

30602 **(USGS-OFR—82-1041) Principal facts of gravity stations with gravity and magnetic profiles from the southwest Nevada Test Site, Nye County, Nevada, as of January 1982.** Jansma, P.E.; Snyder, D.B.; Ponce, D.A. (Geological Survey, Menlo Park, CA (USA)). 1983. Contract AI08-78ET44802. 69p. NTIS, PC A04/MF A01. Order Number DE83010300.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

Three gravity profiles and principal facts of 2604 gravity stations in the southwest quadrant of the Nevada Test Site are documented in this data report. The residual gravity profiles show the gravity measurements and the smoothed curves derived from these points that were used in geophysical interpretations. The principal facts include station label, latitude, longitude, elevation, observed gravity value, and terrain correction for each station as well as the derived complete Bouguer and isostatic anomalies, reduced at 2.67 g/cm^3. Accuracy codes, where available, further document the data.

30603 **(RHO-BW-SA—205A-P) Thermomechanical simulation of a nuclear-waste canister in a repository in basalt.** Topcubasi, A.F.; Lehnhoff, T.L.; Thirumalai, K. (Rockwell International Corp., Richland, WA (USA). Rockwell Hanford Operations). Aug 1982. Contract AC06-77RL01030. 6p. NTIS, PC A02/MF A01. Order Number DE83010608.

This paper discusses how a linear axisymmetric numerical thermo-elastic analysis, using average material properties, was determined to provide adequate accuracy for most near-yield predictions of temperatures, displacements, and stresses.

30604 **Method and apparatus for determining tensile strength.** Ratigan, J.L. US Patent Application 6-382,997. 28 May 1982. 14p. Contract W-7405-ENG-48.

A method and apparatus is described for determining the statistical distribution of apparent tensile strength of rock, the size effect with respect to tensile strength, as well as apparent deformation modulus of both intact and fractured or jointed rock. The method is carried out by inserting a plug of deformable material, such as rubber, in an opening of a specimen to be tested. The deformable material is loaded by an upper and lower platen until the specimen ruptures, whereafter the tensile strength is calculated based on the parameters of the test specimen and apparatus.

30605 **Finite-element method for coupled stress and fluid flow analysis in fractured rock masses.** Noorishad, J.; Ayatollahi, M.S.; Witherspoon, P.A. (Lawrence Berkeley Lab., CA). *International Journal of Rock Mechanics and Mining Sciences and Geomechanics Abstracts;* **19**: 185-193(1982).

A variational principle is used in conjunction with the finite-element method to solve the nonlinear coupled field equations of the initial boundary value problem of flow in deformable fractured rock masses. This results in a powerful method for modeling of coupled stress and fluid flow behavior of rocks. Both stress and deformation history for both solid and liquid phases, for arbitrary boundary conditions and within complex geometrical configuration, can be determined. Direct application is to fluid flow problems in hydraulically fractured reservoirs and naturally fractured rocks.

30606 **(DOE/ER/10774—3) Very high energy gamma ray astrophysics.** Lamb, R.C. (Iowa State Univ. of Science and Technology, Ames (USA)). Mar 1983. Contract AC02-80ER10774. 8p. NTIS, PC A02/MF A01. Order Number DE83009438.

We report our progress to detect sources of very high energy gamma rays ($E\gamma > 10^{11}$ eV) and to improve the instrumentation of detectors in this energy regime. Approximately 4 x 10^5 Cerenkov air shower events from the region of Cygnus X-3 and the Crab nebula have been collected with our JPL instrumentation during the fall of 1982. Analysis of these events is in progress. We should be able to improve significantly on our 1981 sensitivity to source variations. We also continue our collaboration at Mt. Hopkins to develop a Cerenkov air shower camera. A suitable mirror and mount for use as a detector auxiliary to the primary 10 inch Mt. Hopkins detector has been located. By May 1983 the mirror and mount should be moved to Mt. Hopkins and fitted for observations by the fall.

30607 **(FERMILAB-CONF—83/22) Underground neutrino astronomy.** Schramm, D.N. (Fermi National Accelerator Lab., Batavia, IL (USA); Chicago Univ., IL (USA). Astronomy and Astrophysics Center). Feb 1983. Contract AC02-80ER10773;AC02-76CH03000. 7p. (CONF-820989—6). NTIS, PC A02/MF A01. Order Number DE83008914.

From Workshop on science underground; Los Alamos, NM, USA (27 Sep 1982).

A review is made of possible astronomical neutrino sources detectable with underground facilities. Comments are made about solar neutrinos and gravitational-collapse neutrinos, and particular emphasis is placed on ultra-high-energy astronomical neutrino sources. An appendix mentions the exotic possibility of monopolonium.

30608 **(ITEF—23(1982)) Gasodynamical models of the type 2 supernovae.** Litvinova, I.Yu.; Nadezhin, D.K. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1982. 54p. (In Russian). NTIS (US Sales Only), PC A04/MF A01. Order Number DE83700223.

A series of gasodynamical models of the type 2 supernova outbursts (SN 2) has been calculated. Approximate relations connecting the total outburst energy E, the mass of envelope ejected M, the presupernova radius R, and the amount of ionizing quanta radiated by the supernovae Nsub(H) with such values as the duration of the light curve plateau, and absolute magnitude in the wavelength band and photospheric velocity observed near the middle of the plateau have established. An advantage has been taken of the relations to obtain a preliminary evaluation of the characteristics of the average SN 2: $E=7x10^{50}$ erg, M=6 Msub(Sun), R=500 Rsub(Sun), Nsub(H)=$2x10^{56}$. The SN 2 with the plateau-like light curves seem to be accounted for by thermonuclear explosions of degenerate cores of the red giant stars and result in total disruption of the star without any stellar remnant. On the contrary, the SN 2 with the linear light curves have substantially different properties (in particular, they throw considerably less massive envelopes off). These SN 2 must signify the birth of collapsed objects-neutron stars (pulsars) or black holes.

30609 **(ITF—81-84-R) Kinetics of molecular hydrogen production, thermochemical evolution of protogalaxies primeval matter and properties of the first generation collapsing protostars.** Izotov, Yu.I.; Kolesnik, I.G. (AN Ukrainskoj SSR, Kiev. Inst. Teoreticheskoj Fiziki). 1981. 37p. (In Russian). NTIS (US Sales Only), PC A03/MF A01. Order Number DE83700224.

The molecular hydrogen formation in primeval gas of protogalaxies having T approximately 10^4 K and density n approximately 0.1-1 cm^{-3} is considered. Due to nonequilibrium conditions, the relative number density of H_2 molecules up to approximately 10^{-3} can be obtained. Cooling by molecular hydrogen leads to formation of cold fragments with masses approximately 10^3-10^4 Msub(Sun) and T approximately 10^2 K, involved in hot environment. Dynamical evolution of these fragments is considered and the conclusion is made that the first generation stars may be massive with Msub(*) approximately 70 Msub(Sun).

30610 **(JINR-R—2-81-645) Study of the Earth structure by neutrino experiments.** Nedyalkov, I.P. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Problems). 1981. 12p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700225.

The problem on the study of the Earth structure by means of neutrino experiments is considered. It is shown that measuring of the attenuation of neutrino beams after their passage of the Earth one can reconstruct its density distribution. The reconstruction is performed with the aid of the formulae of computerized tomography. This procedure is successful if the intensity of neutrino beams is measur d with very high accuracy. The requirement is achieved by a new method of tugged neutrinos. The last is characterized by a very accurate measurement of the components π- and K-meson four-momentum and the four-momentum of the simultaneously generated muon. The conclusion is that if there would be

accelerators of few TeV energies and detectors of the DUMAND type, the experiment described is realisable.

30611 **(KFKI—1982-20) Observation of solar radio bursts of type II and III at kilometer wavelengths from Prognoz-8 during STIP Interval XII. 10 April - 21 June 1981.** Pinter, S.; Grigorieva, V.P.; Kecskemety, K.; Kudela, K. (Hungarian Academy of Sciences, Budapest. Central Research Inst. for Physics). Apr 1982. 13p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700226.

Type II and type III radio events were observed at low frequencies (2.16 MHz to 114 kHz) by the Prognoz-8 satellite during the period of STIP Interval XII in April and May, 1981, respectively. This review covers briefly a chronology of the sub-megahertz radio events, and where possible their association with both groundbased radio observations and solar flare.

30612 **(LA-UR—83-643) Accretion disks.** Sparks, W.M.; Kutter, G.S. (Los Alamos National Lab., NM (USA); Evergreen State Coll., Olympia, WA (USA)). 1983. Contract W-7405-ENG-36. 5p. (CONF-830135—2). NTIS, PC A02/MF A01. Order Number DE83010161.

From 7. North American workshop on cataclysmic variables and low-mass X-ray binaries; Boston, MA, USA (12 Jan 1983).

Derivations are made for the mass and the mass-turnover time scale of an accretion disk as a function of the accretion rate, the observed disk radius, the non-viscous disk radius, and two parameters. These parameters depend on the effectiveness of viscosity and tidal angular momentum loss. Application is made to DQ Herculis.

30613 **(LA-UR—83-751) Cosmological and astrophysical implications of magnetic monopoles.** Kolb, E.W. (Los Alamos National Lab., NM (USA)). 11 Mar 1983. Contract W-7405-ENG-36. 21p. (CONF-830134—1). NTIS, PC A02/MF A01. Order Number DE83009969.

From Orbis scientiae conference; Miami, FL, USA (17 Jan 1983).

Among Dirac's many contributions to modern physics is the idea that charge quantization is natural in a theory with magnetic monopoles. The existence of magnetic monopoles would have drastic effects on the evolution of the universe, on galactic magnetic fields, and perhaps on the x-ray luminosity of neutron stars. Some astrophysical implications of massive magnetic monopoles are reviewed here.

30614 **(LA-UR—83-786) Delta Scuti variables. Lecture 6.** Cox, A.N. (Los Alamos National Lab., NM (USA)). 1983. Contract W-7405-ENG-36. 20p. (CONF-830337—7). NTIS, PC A02/MF A01. Order Number DE83010094.

From Swiss Society of Astrophysics and Astronomy conference; Saas Fee, Switzerland (21 Mar 1983).

Portions are illegible in microfiche products.

The class of variables near or on the upper main sequence, the delta Scuti variables, are not only the usual ones about the masses, radii, and luminosities, but also the age, rotation, element diffusion to change the surface layer composition, the occurance of convection and the presence of radial and nonradial pulsation modes. (GHT)

30615 **(LA-UR—83-787) Linear nonradial pulsation theory. Lecture 7.** Cox, A.N. (Los Alamos National Lab., NM (USA)). 14 Mar 1983. Contract W-7405-ENG-36. 18p. (CONF-830337—6). NTIS, PC A02/MF A01. Order Number DE83010090.

From Swiss Society of Astrophysics and Astronomy conference; Saas Fee, Switzerland (21 Mar 1983).

Microfiche only, copy does not permit paper copy reproduction.

Many of the upper main-sequence stars pulsate in spheroidal nonradial modes. We know this to be true in numerous cases, as we have tabulated for the β Cephei and δ Scuti variables in previous lectures. However, we cannot identify the actual mode for any star except for the low-order pressure p and f modes of our sun. It remains a great challenge to clearly state what really is occurring, in the process we learn more about how stars evolve and pulsate.

30616 **(LA-UR—83-789) Nonlinear hydrodynamics. Lecture 9.** Cox, A.N. (Los Alamos National Lab., NM (USA)). 14 Mar 1983. Contract W-7405-ENG-36. 18p. (CONF-830337—9). NTIS, PC A02/MF A01. Order Number DE83010082.

From Swiss Society of Astrophysics and Astronomy conference; Saas Fee, Switzerland (21 Mar 1983).

A very sophisticated method for calculating the stability and pulsations of stars which make contact with actual observations of the stellar behavior, hydrodynamic calculations are very simple in principle. Conservation of mass can be accounted for by having mass shells that are fixed with their mass for all time. Motions of these shells can be calculated by taking the difference between the external force of gravity and that from the local pressure gradient. The conservation of energy can be coupled to this momentum conservation equation to give the current temperatures, densities, pressures, and opacities at the shell centers, as well as the positions, velocities, and accelerations of the mass shell interfaces. Energy flow across these interfaces can be calculated from the current conditions, and this energy is partitioned between internal energy and the work done on or by the mass shell. We discuss here only the purely radial case for hydrodynamics because it is very useful for stellar pulsation studies.

30617 **(LA-UR—83-790) Supergiant radial and nonradial pulsations. Lecture 10.** Cox, A.N. (Los Alamos National Lab., NM (USA)). 14 Mar 1983. Contract W-7405-ENG-36. 20p. (CONF-830337—8). NTIS MF A01. Order Number DE83010083.

From Swiss Society of Astrophysics and Astronomy conference; Saas Fee, Switzerland (21 Mar 1983).

Microfiche only, copy does not permit paper copy reproduction.

The stars that we consider here have luminosities above 10,000 solar luminosities and masses above 15 solar masses. We contact the 53 Per stars such as ν Ori, 10 Lac, and iota CMa at our lower luminosity limit, and at the most luminous limit, we have the famous stars eta Car, Cyg OB12, and P Cyg. Evolution tracks including a reasonable mass loss rate are given for 15, 30, 60, and 120 solar masses. It appears that our pulsators have masses less than 60 solar masses, but how do the most luminous stars observed survive mass loss. Do they have masses above 100 solar masses as indicated, or are these stars somehow superluminous due to their erratic mass loss behavior. Popper (1980) studying the masses in binary systems has never found one with a value greater than 27 solar masses.

30618 **(LA-UR—83-812) Positrons from supernova and the origin of the galactic-center positron-annihilation radiation.** Colgate, S.A. (Los Alamos National Lab., NM (USA)). 17 Mar 1983. Contract W-7405-ENG-36. 9p. (CONF-830136—1). NTIS, PC A02/MF A01. Order Number DE83009997.

From Workshop on positron-electron pairs in astrophysics; Greenbelt, MD, USA (6 Jan 1983).

Portions are illegible in microfiche products.

The emission of positrons from supernova ejecta is dicussed in terms of the galactic-center annihilation radiation. The positrons from the radioactive sequences $^{56}Ni \rightarrow ^{56}Co \rightarrow ^{56}Fe$ are the most numerous source from supernova. Only type I supernova will allow a significant fraction to escape the expanding ejecta. For a neutron star model of a type I SN a fraction 4×10^{-3} of the escaped positron is enough to create the observed several year fluctuation of the annihilation radiation. The likelihood of this model is discussed in terms of other astrophysical evidence as well as the type I SN light curve.

30619 **(LA-UR—83-892) Cataclysmic variables as probes of x-ray properties of interstellar grains.** Bode, M.F.; Evans, A.; Norwell, G.A. (Los Alamos National Lab., NM (USA); Keele Univ. (UK)). 1983. Contract W-7405-ENG-36. 7p. (CONF-830135—1). NTIS, PC A02/MF A01. Order Number DE83009888.

From 7. North American workshop on cataclysmic variables and low-mass X-ray binaries; Boston, MA, USA (12 Jan 1983).

Interstellar-grain properties have previously been probed at wavelengths ranging from the infrared to the ultraviolet. Recent

work by other authors has shown that we may also observe the effects of scattering by such grains at x-ray wavelengths. In this paper we suggest that investigations of the x-ray properties of interstellar grains may profitably be conducted in sight lines to variable sources. Particular emphasis is given in this context to cataclysmic variables and related objects.

30620 **(LA-UR—83-977) Spacecraft charging and related effects during Halley encounter.** Young, D.T. (Los Alamos National Lab., NM (USA); Southwest Research Inst., San Antonio, TX (USA)). 1983. Contract W-7405-ENG-36. 18p. (CONF-821183—1). NTIS, PC A02/MF A01. Order Number DE83009912.

From International conference on cometary exploration; Budapest, Hungary (15 Nov 1982).

Hypervelocity (69 km/s) impact of cometary material with surfaces of the GIOTTO spacecraft will induce a number of spurious and possibly harmful phenomena. The most serious of these is likely to be spacecraft charging that results from impact-produced plasma distributions surrounding GIOTTO. The ESA Plasma Environment Working Group, whose studies are the basis for this report, finds that charging may become significant within $\sim 10^5$ km of the nucleus where potentials of $\approx +20$ V are to be expected. In addition to spacecraft charging, impact produced plasma may interfere with in situ plasma measurements, particularly those of ion plasma analyzers and mass spectrometers.

30621 **(VT—1) Nonlinear mechanism of radiation generation in pulsar plasma.** Mikhajlovskij, A.B.; Suramlishvili, G.I. (AN Gruzinskoj SSR, Tbilisi. Inst. Fiziki). 1981. 6p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700227.

With account for electron - positron structure of the pulsar magnetosphere plasma nonlinear mechanisms of its radiation generation are considered. A high level of Langmuir oscillations in a pulsar plasma is supposed. Estimates of radiation energy increase velocity are presented under the condition that the cyclotron frequency does not exceed the plasma one. An assumption is made that such condition can be realized near the light cylinder. The mechanisms considered lead to radio and infrared radiation of young pulsars and to radio radiation of old pulsars.

30622 **Equation of state experiments and theory relevant to planetary modelling.** Ross, M.; Graboske, H.C. Jr.; Nellis, W.J. (Lawrence Livermore National Lab., CA). *Philosophical Transactions of the Royal Society of London, Series A: Mathematical and Physical Sciences;* **303**: 303-313(1981). Contract W-7405-ENG-48.

In recent years there have been a number of static and shockwave experiments on the properties of planetary materials. The highest pressure measurements, and the ones most relevant to planetary modelling, have been obtained by shock compression. Of particular interest to the Jovian group are results for H_2, H_2O, CH_4 and NH_3. Although the properties of metallic hydrogen have not been measured, they have been the subject of extensive calculations. In addition recent shock wave experiments on iron report to have detected melting under earth core conditions. From this data theoretical models have been developed for computing the equations of state of materials used in planetary studies. A compelling feature that has followed from the use of improved material properties is a simplification in the planetary models. 51 references, 5 figures.

REFER ALSO TO CITATION(S) 29965, 30819

30623 **(AERE-TP—890) Doppler-free two-photon excitation of ^{238}U.** Hodgkinson, D.P.; Wort, D.J.H. (UKAEA Atomic Energy Research Establishment, Harwell. Theoretical Physics Div.). Apr 1981. 40p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE83700198.

A theory of resonantly enhanced two-photon absorption is presented and tested in a number of experiments in which ^{238}U vapour is excited by two continuous wave dye lasers. Good quantitative agreement between theory and experiment is found. In particular the central prediction of the theory, that antiparallel laser beams of modest intensity can pump an appreciable fraction of the Maxwell velocity distribution, has been checked directly by measuring the spectral width of the fluorescence from the two-photon excited level.

30624 **(ANL—81-85-Pt.1) Radiological and Environmental Research Division annual report: fundamental molecular physics and chemistry, October 1980-September 1981.** (Argonne National Lab., IL (USA)). Dec 1982. Contract W-31-109-ENG-38. 155p. NTIS, PC A08/MF A01. Order Number DE83009476.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

Research summaries are presented for fundamental molecular physics and chemistry. Of the forty-three items in the report, thirty-six were included previously in the data base. Abstracts of seven items were prepared separately for inclusion in this issue and in the data base. (GHT)

30625 (ANL—81-85-Pt.1, pp 90-92) **Angular distribution of electrons inelastically scattered from HgBra2 between 4 and 14 eV.** Spence, D.; Wang, R.G.; Dillon, M.A. Dec 1982. NTIS, PC A08/MF A01.

In Radiological and Environmental Research Division annual report: fundamental molecular physics and chemistry, October 1980-September 1981.

Spectra of electrons inelastically scattered from $HgBr_2$ and $HgCl_2$ were presented for incident electron energies of 200 eV, scattering angle 3°, and energy loss between 4 and 14 eV. Under the experimental conditions the energy loss spectrum corresponds closely to the optical absorption intensity distribution. In addition to well-known optical absorption bands, those spectra revealed many new energy-loss processes, mainly due to Rydberg state excitation, at energies above about 7 eV. In order to provide more guidance to interpretation of these spectra, we have recently extended our measurements to larger scattering angles, where one may reasonably expect a separation of features resulting from allowed and forbidden states to occur. In this present short report we present no further analysis but merely show a small portion of our extensive data for $HgBr_2$ and which we will later use in further analysis of our spectra.

30626 (ANL—81-85-Pt.1, pp 93-94) **Electron energy loss spectra in hydrogen chloride.** Wang, R.G.; Dillon, M.A.; Spence, D. Dec 1982. NTIS, PC A08/MF A01.

In Radiological and Environmental Research Division annual report: fundamental molecular physics and chemistry, October 1980-September 1981.

We have obtained the first electron energy loss spectra in hydrogen chloride in the energy loss range of 5 to 19 eV for incident electron energies of 200 eV and scattering angles between 0° and 25°.

30627 (ANL—81-85-Pt.1, pp 95-97) **Electron energy loss spectroscopy in molecular chlorine.** Spence, D.; Wang, R.G.; Dillon, M.A. Dec 1982. NTIS, PC A08/MF A01.

In Radiological and Environmental Research Division annual report: fundamental molecular physics and chemistry, October 1980-September 1981.

We have obtained electron energy loss spectra in molecular chlorine in the energy-loss range of 5 to 14 eV for incident electron energy of 200 eV and scattering angles between 3° and 15°. Under the experimental conditions the spectra obtained for scattering angles near the forward direction correspond closely to optical absorption spectra, the most prominent features arising from excitation of optically allowed Rydberg states.

30628 (ANL—81-85-Pt.1, pp 99-103) **Phenomenological study of heterogeneous chemical reactions on heated stainless steel surfaces relevant to mercuric halide lasers.** Wang, R.G.; Dillon, M.A.; Spence, D. Dec 1982. NTIS, PC A08/MF A01.

In Radiological and Environmental Research Division annual report: fundamental molecular physics and chemistry, October 1980-September 1981.

Although the mercuric halides have received intensive study in recent years, because of their potential use as electronic transition laser systems, very little is known, even on a qualitative basis, of the chemical reactions that occur in practical laser devices containing mercuric halides. Mercuric halides are solid crystalline compounds at room temperature, and sufficient vapor pressure for efficient laser operation is usually achieved by heating the salt to between 100° and 200°C, in a discharge cavity usually constructed of stainless steel. In an attempt to shed light on some possible chemical species which may be produced in laser cavities, and the concomitant reactions which may occur on heated stainless steel surfaces, we have used the technique of electron energy loss spectroscopy as an analytic tool.

30629 (ANL—81-85-Pt.1, pp 119-124) **Least squares fitting method for transitions with resonances.** Dillon, M.A. Dec 1982. NTIS, PC A08/MF A01.

In Radiological and Environmental Research Division annual report: fundamental molecular physics and chemistry, October 1980-September 1981.

Energy-level transitions can be simulated by least squares polynomial fits to relative oscillator strength distribution. An example used is the argon 3p to s,d transition. (GHT)

30630 (ANL—81-85-Pt.1, pp 125-127) **Phase shifts in the GWKB approximation.** Dillon, M.A. Dec 1982. NTIS, PC A08/MF A01.

In Radiological and Environmental Research Division annual report: fundamental molecular physics and chemistry, October 1980-September 1981.

The most flexible semiclassical treatment of the radial Schroedinger equation is the generalized WKB approximation. The atomic phase shifts calculated by direct integration of the radial equation are compared with those obtained by application of the GWKB approximation. (GHT)

30631 (BNL—32706) **Classical estimates of the numbers of normal, local and stochastic states of polyatomic molecules as functions of energy: applications to H_2O.** Ruf, B.A.; Muckerman, J.T.; Ashton, C.J.; Noid, D.W. (Brookhaven National Lab., Upton, NY (USA); Oak Ridge National Lab., TN (USA)). 1983. Contract AC02-76CH00016. 4p. (CONF-830433—1). NTIS, PC A02/MF A01. Order Number DE83009727.

From SRC conference on intramolecular kinetics; Warwick, UK (18 Apr 1983).

For a general polyatomic molecule, the classical phase space at some fixed energy and angular momentum is divisible into two regimes: a quasiperiodic and a stochastic (or chaotic) regime. In certain molecules - those having symmetrically equivalent X-H bonds, where X is any heavy atom - the classical trajectories comprising the quasiperiodic regime can be subdivided into two classes: normal trajectories, for which the time-averaged amplitudes in all the X-H stretching vibrations are equivalent, and local trajectories, which exhibit a permanent imbalance in the amplitudes of the various X-H stretching vibrations. We report here the development of trajector diagnostics for bound, nonseparable motion to distinguish normal, local, and stochastic types of motion in systems with more than two internal (coordinate) degrees of freedom, and the application of these diagnostics to determine the numbers of normal, local, and stochastic states of a realistic model of nonrotating H_2O as functions of energy. This application is the first such study for a real polyatomic molecule.

30632 (CONF-810231—5) **Coulomb-explosion technique for determining geometrical structures of molecular ions.** Gemmell, D.S. (Argonne National Lab., IL (USA)). 1981. Contract W-31-109-ENG-38. 25p. NTIS, PC A02/MF A01. Order Number DE83010587.

From 5. international conference on ion beam analysis; Sydney, Australia (16 Feb 1981).

Portions are illegible in microfiche products.

Traditional experimental techniques (e.g. studies on photon absorption or emission) for determining the sterochemical structures of neutral molecules are extremeley difficult to apply to molecular ions because of problems in obtaining a sufficient spatial density of the ions to be studied. Recent high-resolution measurements on the energy and angle distributions of the fragments produced when fast (MeV) molecular-ion beams from an electrostatic accelerator dissociate (Coulomb explode) in thin foils and in gases, offer promising possibilities for deducing the sterochemical structures of the molecular ions constituting the incident beams. Bond lengths have been determined in this way for several diatomic projectiles (H_2^+, HeH^+, CH^+, NH^+, OH^+, N_2^+, O_2^+, etc.) with an accuracy of $\sim$ 0.01 A. H_3^+ has been demonstrated (for the first time) to be equilateral triangular and the interproton distance measured. Measurements on single fragments from CO_2^+, N_2O^+, $C_2H_2^+$, and CH/sub n/$^+$ have revealed the gross structures of the projectiles. An apparatus has recently been constructed at Argonne to permit precise measurements on fragments in coincidence. The apparatus has been tested on a known structure (OH_2^+). The O-H bond length was found to be 1.0 +- 0.04 A and the H-O-H bond angle was measured as 110 — 2°. These values are in excellent agreement with those found in optical experiments (0.999 A and 110.5°). This Coulomb explosion technique can be expected to be refined in accuracy and to be extended to a wide range of molecular ions whose structures are inaccessible by other means.

30633 (CONF-821066—4) **Ion-source development at Argonne.** Billquist, P.J.; Yntema, J.L. (Argonne National Lab., IL (USA)). 1982. Contract W-31-109-ENG-38. 7p. NTIS, PC A02/MF A01. Order Number DE83008911.

From Symposium for Northeastern Accelerator personnel; Seattle, WA, USA (6 Oct 1982).

Brief descriptions are given of the ion source test stand, the ANIS source, a copy of the SNICS source, and the Chapman inverted sputter source. Relative performance is discussed, particularly for the inverted sputter source. Beam currents are given for several ion species. (GHT)

30634 (CONF-830449—1) **Interactions of fast molecular-ion beams with matter.** Gemmell, D.S.; Kanter, E.P.; Schneider, D. (Argonne National Lab., IL (USA)). 1983. Contract W-31-109-ENG-38. 4p. NTIS, PC A02/MF A01. Order Number DE83010798.

From DOE contractors workshop; Oak Ridge, TN, USA (21 Apr 1983).

Topics covered include: contribution of field-ionized Rydberg atoms to convoy electron spectra; microwave field ionization of fast Rydberg atoms; coherent Stark states in foil-excited fast Rydberg atoms; and equilibration lengths of K-Vacancy production in solids. (GHT)

30635 (CONF-8208130—1) **Studies of photoionization processes from ground-state and excited-state atoms and molecules.** Ederer, D.L.; Parr, A.C.; West, J.B. (National Bureau of Standards, Washington, DC (USA). Radiation Physics Div.; Science Research Council, Daresbury (UK). Daresbury Lab.; Reading Univ. (UK); Maryland Univ., College Park (USA); Argonne National Lab., IL (USA); Paris-11 Univ., 91 - Orsay (France). Centre de Spectrometrie Nucleaire et de Spectrometrie de Masse; Centre National de la Recherche Scientifique, 91 - Orsay (France). Lab. Aime Cotton; Yale Univ., New Haven, CT (USA)). 1982. Contract W-31-109-ENG-38. 14p. NTIS, PC A02/MF A01. Order Number DE83010595.

From Workshop on techniques for the production and utilization of polarization radiation in the vacuum ultraviolet; London, UK (18 Aug 1982).

Portions are illegible in microfiche products.

Recent triply-differential photoelectron spectroscopy experiments designed for the study of correlation effects in atoms and molecules are described. Final-state symmetry of the n=2 state of helium has been determined. The non-Franck-Condon behavior of vibrational branching ratios and large variations of the angular asymmetry parameter has been observed for shape resonances and autoionizing resonances in CO and other molecules. Recent observations of the photoionization of excited sodium atoms are also described.

30636 (DOE/ER/10748—3) Many-body processes in atomic and molecular physics. Progress report, September 1, 1982-August 31, 1983. Chu, S.I. (Kansas Univ., Lawrence (USA). Dept. of Chemistry). Apr 1983. Contract AC02-80ER10748. 30p. NTIS, PC A03/MF A01. Order Number DE83010372.

Progress is reported in the following areas: (1) development of a powerful semiclassical many-mode Floquet theory for nonperturbative treatment of the multiphoton dynamics of a quantum system interacting with several monochromatic radiation fields, (2) development of analytical quasi-level models for line shape analysis of intense field molecular multiphoton absorption spectra, (3) completion of a high-precision rotatonal predissociation lifetime determination of Ar-H_2 and Ar-HD van der Waals (vdW) molecules, using the complex-coordinate coupled-channel (CCCC) formalisms, and (4) development of the complex quasi-vibrational energy (QVE) and the inhomogeneous differential equation (IDE) approaches for calculating multiphoton dissociation (MPD) rates from highly excited vibrational states of diatomic molecules. (WHK)

30637 (DOE/ER/12081—1) Hyperspherical coordinate theory of two electron atomic processes. Progress report, 1 August 1982-31 July 1983. Macek, J.; Starace, A.F. (Nebraska Univ., Lincoln (USA)). Mar 1983. Contract AC02-82ER12081. 11p. NTIS, PC A02/MF A01. Order Number DE83010917.

A multidimensional R-matrix type approximation is formulated for the situation where two electrons emerge from a region near an atomic nucleus. Essentially exact wave functions based on the Fock expansion are used inside a hyperradius R_0, and superpositions of adiabatic channel functions are used outside of R_0. The appropriate superposition of Fock solutions in the inner region and adiabatic channel functions in the outer region are determined by minimizing the difference between the two representations at R_0. We show that this procedure gives a set of eigenvalues equal in number to the number of channel functions used in the outer region. The eigenvalues and corresponding eigenvectors then determine the starting conditions for the outward integration of the adiabatic equations. A computer program to generate the Fock coefficients recursively has been written and is being debugged. A complete classification of the Wannier modes of motion for three interacting particles has been formulated ad used to analyze threshold angular distributions of secondary electrons. Wave functions based on the 0_4 classification have been compared with adiabatic functions and elaborate configuration interaction functions. We find that one 0_4 mode, namely that mode which minimizes the electron-electron repulsion, is accurately represented in the 0_4 classification scheme. All others are inaccurate to varying degrees.

30638 (DOE/NBM—3010753) Formation of Rydberg states in fast ion-atom collisions. Schneider, D.; Kanter, E.P.; Vager, Z.; Gemmell, D.; Koch, P.; Mariani, D.; Van de Water, W. (Argonne National Lab., IL (USA)). 1983. Contract W-31-109-ENG-38. 4p. NTIS, PC A02/MF A01. Order Number DE83010753.

Previous results from beam-foil spectroscopy and from experiments using field ionization techniques have shown that a significant fraction of fast ionic projectiles traversing solid targets can be excited to high Rydberg states. We report an experimental investigation of Rydberg states formed in atomic and molecular ion beams (MeV) emerging from thin-carbon foils. Different field arrangements, including μ-wave fields, have been applied to study the effects of field ionization. The yields of electrons produced via field ionization are compared for different projectile atoms and molecules.

30639 (GEPP-TIS—726a) Influence of gap length on the field increase factor β. Miller, H.C. (General Electric Co., St. Petersburg, FL (USA). Neutron Devices Dept.). 7 Apr 1983. Contract AC04-76DP00656. 19p. NTIS, PC A02/MF A01. Order Number DE83009599.

β, the increase of the macroscopic electric field at the tip of a projection, varies with the gap length. The sign and magnitude of this variation depends upon how the gap length is defined. If gap length is defined as x, the distance from the projection tip to the opposing electrode, than β is a strong function of x and may be approximated by $\beta(x) = \beta/\text{sub } \infty/\ x/(x + h)$ [h = projection height] in the region where $x/h > 10/\beta/\text{sub } \infty/$. If gap length is defined as d, the interelectrode distance ignoring the projection, the β is a weak function of d and may be set equal to $\beta/\text{sub } \infty/$ in the region $d/h > 2$.

30640 (IAE—3374/11) Model for investigating high-energy cascade by computer modelling. Kapinos, V.G.; Kevorkyan, Yu.R. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1981. 29p. (In Russian). NTIS (US Sales Only), PC A03/MF A01. Order Number DE83700202.

A new model for investigating high-energy cascades making it possible to estimate the influence of temperature and impurity disturbances on the defect distribution in cascade damage regions (CDR) is proposed. The cascade high energy part is described in the pair collision approximation, the low- energy part by means of a special algolithm which is based on the semiphenomenological description of the process of substituting collision chains (SCC) development. The temperature effect on the SCC development has been evaluated according to the Pugatcheva theory. The algorithm describing the SCC development process is approved on the proper problems calculated by the molecular dynamics method. The satisfactory correspondence of results for both: static and "hot" d-Fe and Cu lattices is shown. Calculations of SCC lengths in Cu and α-Fe at different temperatures, various directions and primary-knocked out atom (PNA) energies are carried out. It is shown that SCC average lengths are inessentially dependent on crystal temperature in the range from 0 to 500 K. The calculations of cascades initiated by PNA with energy of 15 keV at T=500 K in the α-Fe lattice containing implantation impurity are performed. It is shown that up to concentrations approximately 2000 ppm the impurity does not essentially effect on the dynamic phase of cascade development.

30641 (JINR—R-4-81-835) Charge screening effects in mesic molecules of hydrogen isotopes. Bakalov, D.D.; Melezhik, V.S. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1981. 12p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700199.

The charge screening effects in the molecular complexes [(DD sub(μ))D2e] and [(DT sub(μ))D2e] have been evaluated with the use of the mesic molecule wave functions calculated in the adiabatic representation of the three-body problem with account of the hyperfine structure of the mesic molecule energy levels. It has been shown that in the weakly bound states of DD sub(μ) and DT sub(μ) screening effects shift the molecular-complex energy levels of [(DD sub(μ))D2e] and [(DT sub(μ))D2e] by 16 MeV and 25 MeV, respectively, that is equivalent to a shift of the resonance temperature of their formation of about 100 deg C, resp. 200 deg C. In the remaining states of the mesic molecules the energy levels shift does not exceed a few MeV. The quadrupole splitting of the molecular-complex energy levels has also been evaluated: in the weakly bound states it equals about 2 MeV.

30642 (JINR—R-4-81-851) Hyperfine energy level structure of the Dμ mesoatom and DDμ mesomolecule and kinetics of mesomolecular processes in deuterium. Somov, L.N. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Problems). 1981. 6p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700200.

It is shown that taking account of a hyperfine structure (HFS) of energy levels in a muonic atom dsub(μ) and muonic molecule ddsub(μ) brings to the observation of new physical effects. Organization of experiments studying these effects is discussed. The calculation of the kinetics of mesomolecular processes with taking into account (HFS) is presented. Time and integral yields of fusion products taking into account (HFS) are obtained. It is demonstrated that in experiments studying the rate of muonic molecule ddsub(μ) production at low pressures and temperatures of 20-100 K one can define the location of a resonance with an absolute accuracy of the order of approximately 10^{-5} eV.

30643 (LA-UR—83-847) Multiphoton-induced fluorescence and ionization of B^1u^+ carbon monoxide. Loge, G.W.; Tiee, J.J.; Wampler, F.B. (Los Alamos National Lab., NM (USA)). 1983. Contract W-7405-ENG-36. 14p. (CONF-830425—5). NTIS, PC A02/MF A01. Order Number DE83010095.

From Society of Photo-Optical Instrumentation Engineers conference; Santa Fe, NM, USA (11 Apr 1983).

The $B^1\Sigma^+$ state of carbon monoxide was created by a two-photon absorption of 230-nm laser radiation. The $B^1\Sigma^+$ state was identified by the positions of the 0-0 absorption band Q-branch and the vibrational bands of $B^1\Sigma^+ \rightarrow A^1PI$ fluorescence occurring in the 525-nm region. Collision-induced $b^3\Sigma^+ \rightarrow a^3PI$ emission in the 350-nm region was also observed. The lifetimes of both the $B^1\Sigma^+$ state and the $b^3\Sigma^+$ state were measured as well as the self-quenching rate constants and the $B^1\Sigma^+$ quenching rate by N_2. In addition to the two-photon-induced fluorescence of $B^1\Sigma^+$ carbon monoxide, a three-photon ionization was observed. Laser power-dependence studies indicated that ionization of the $B^1\Sigma^+$ state is readily saturated, implying that most $B^1\Sigma^+$ state CO is ionized rather than fluoresecing. Measurement of the polarization ratio for circularly and linearly polarized excitation of fluorescence and ionization suggests that another three-photon process is occurring and occurs more efficiently for linear polarization.

30644 (LA-UR—83-872) Multiphoton laser-induced-fluorescence studies of simple species. Tiee, J.J.; Ferris, M.J.; Loge, G.W.; Wampler, F.B. (Los Alamos National Lab., NM (USA)). 1983. Contract W-7405-ENG-36. 18p. (CONF-830425—4). NTIS, PC A02/MF A01. Order Number DE83009884.

From Society of Photo-Optical Instrumentation Engineers conference; Santa Fe, NM, USA (11 Apr 1983).

Portions are illegible in microfiche products.

Recent studies have demonstrated multiple-photon excitation of atomic species. Bischel and coworkers have provided a detailed description of two-photon excitation fluorescence in the detection of atoms generated in a low pressure discharge and its possible application as a diagnostic tool in flame and plasmas. It is also believed that such techniques can be useful in detecting molecular transients which are difficult to detect otherwise as demonstrated in two-photon laser-induced fluorescence (LIF) detection of NO. In this paper, we discuss our recent two-photon LIF studies on I and Br atoms, which are produced via laser photolysis of molecular precursors. The two-photon LIF study of HS and DS radicals is presented as a test case for the detection of other important radical species such as C_2H and CH_3, which are currently being investigated in our laboratory. In addition, excitation of three-photon resonances of I_2, N_2, and H_2 is discussed.

30645 (ORNL/TM—8693) Search for existence of D_2p, D_3^-, and HD_2^- formed in double-electron-capture collisions. Barnett, C.F. (Oak Ridge National Lab., TN (USA)). Mar 1983. Contract W-7405-ENG-26. 15p. NTIS, PC A02/MF A01. Order Number DE83010410.

A search has been made for the existence of D_2^-, D_3^-, and HD_2^- ions formed by double electron capture collisions of the parent positive molecular ions in H_2 and Xe. Negative molecular ions were not observed indicating the double electron capture cross sections for formation of D_2^-, D_3^- and HD_2^- must be less than 10^{-20} cm^2 in the energy range 10 to 50 keV.

30646 High power linear pulsed beam annealer. Sadana, D.K.; Strathman, M.D.; True, R.B. (to Dept. of Energy). US Patent 4,371,774. 1 Feb 1983. Filed date 26 Nov 1980. vp.

PAT-APPL-210488.

A high power pulsed electron beam is produced in a system comprised of an electron gun having a heated cathode, control grid, focus ring, and a curved drift tube. The drift tube is maintained at a high positive voltage with respect to the cathode to accelerate electrons passing through the focus ring and to thereby eliminate space charge. A coil surrounding the curved drift tube provides a magnetic field which maintains the electron beam focused about the axis of the tube and imparts motion on electrons in a spiral path for shallow penetration of the electrons into a target. The curvature of the tube is selected so there is no line of sight between the cathode and a target holder positioned within a second drift tube spaced coaxially from the curved tube. The second tube and the target holder are maintained at a reference voltage that decelerates the electrons. A second coil surrounding the second drift tube maintains the electron beam focused about the axis of the second drift tube and compresses the electron beam to the area of the target. The target holder can be adjusted to position the target where the cross section of the beam matches the area of the target.

30647 Spectroscopy and lifetime measurements of highly ionized nickel. Jacques, C.; Knystautas, E.J. (Laval Univ., Quebec City (Canada). Dept. de Physique); Druetta, M. (Lyon-1 Univ., 69 - Villeurbanne (France). Lab. de Spectrometrie Ionique et Moleculaire); Berry, H.G. (Argonne National Lab., IL (USA)). *Nuclear Instruments and Methods in Physics Research;* **202**: No. 1/2, 45-47(1 Nov 1982). (In French).

From 6. international conference on fast ion beam spectroscopy; Quebec (Canada) (17 - 20 Aug 1981).

Spectra of highly ionized nickel have been taken using beams of Ni^+ at energies between 2 and 4 MeV in different spectral regions from 100 to 2000 A. We present the most probable identifications as well as the results of 21 lifetime measurements of excited levels.

30648 Search for promethium-like gold lines and other transitions of interest to fusion research. Johnson, B.M.; Jones, K.W. (Brookhaven National Lab., Upton, NY (USA)); Kruse, T.H. (Rutgers - the State Univ., Piscataway, NJ (USA)); Curtis, L.J.; Ellis, D.G. (Toledo Univ., OH (USA)). *Nuclear Instruments and Methods in Physics Research;* **202**: No. 1/2, 53-58(1 Nov 1982).

From 6. international conference on fast ion beam spectroscopy; Quebec (Canada) (17 - 20 Aug 1981).

EUV spectra in the range lambda = 13 - 40 nm were measured for foil-excited gold ions at 31-238 MeV. Data were recorded at the higher energies to extend and to complement previous measurements and at the lowest energy to see if the recently predicted 5s - 5p resonance lines in the Pm-like ion, Au XIX, could be seen in beam-foil excitation. The experimental results are presented, previous beam-foil measurements are reviewed, and the contributions and relations to fusion research are discussed.

30649 Doubly excited states in some light atoms. Berry, H.G.; Brooks, R.L.; Hardis, J.E.; Ray, W.J. (Argonne National Lab., IL (USA). Physics Div.). *Nuclear Instruments and Methods in Physics Research;* **202**: No. 1/2, 73-74(1 Nov 1982).

From 6. international conference on fast ion beam spectroscopy; Quebec (Canada) (17 - 20 Aug 1981).

We have identified a singlet transition in doubly excited helium: $2p^2\ ^1D$-$2p3d\ ^1D$, at 3298 +- 2 A with a full width of 54 A or 0.061 +- 0.005 eV. This width is in good agreement with a previous measurement and theory for the width of the $2p^2\ ^1D_2$ state. We have remeasured the decay rate of $1s^22p\ ^2P$-$1s2p^2\ ^2P$ in Li I and find it is in good agreement with theory. Several transitions in doubly excited Li II have been identified in the 1000 A region. No evidence was found for doubly excited quartet transitions in Li I in the vacuum ultraviolet. We present measurements of wavelengths and fine structure of the $1s2s2p^2\ ^5P$-$1s2p^3\ ^5S$ transitions in C III, N IV and O V.

30650 Comparisons between theory and experiment in two electron systems. Berry, H.G.; DeSerio, R.; Brooks, R.L. (Argonne National Lab., IL (USA). Physics Div.). *Nuclear Instruments and Methods in Physics Research;* **202**: No. 1/2, 95-101(1 Nov 1982).

From 6. international conference on fast ion beam spectroscopy; Quebec (Canada) (17 - 20 Aug 1981).

We shall report on several recent measurements of the wavelengths of the $1s2s\ ^3S_1$-$1s2p\ ^3$Psub(0,2) transitions in helium-like ions of nuclear charge Z = 8 - 26 at several laboratories, including Argonne, Notre Dame, Oxford, Lyon, Berkely and Lund. The precision of some of these measurements is sufficient to test the QED contributions to these transition energies to a few parts per thousand. Our theoretical understanding of such transitions will also be

summarized. We show that a first-order screening correction to the one-electron Lamb shift gives close agreement between theory and all experiments for the two-electron system. It also provides agreement at a similar level of precision with a recent experimental Lamb-shift measurement in one-electron chlorine. We present a calculation of the 1s2p ^{3}P(J = 1 - 2) fine-structure splitting in helium-like fluorine which is in much closer agreement with recent measurements than previous calculations.

30651 **Hyperfine structures of the nd^{1}D(n=3-8) states of ^{3}He I.** Brooks, R.L.; Streif, V.F.; Berry, H.G. (Argonne National Lab., IL (USA). Physics Div.). *Nuclear Instruments and Methods in Physics Research;* **202**: No. 1/2, 113-117(1 Nov 1982).

From 6. international conference on fast ion beam spectroscopy; Quebec (Canada) (17 - 20 Aug 1981).

We have used the beam-foil quantum beat method to measure the hyperfine structure separations F = 3/2 - 5/2 of the 1snd ^{1}D states (n = 3 - 8) of ^{3}He I. We observed the single frequency modulated decay curves of the 1s2p ^{1}P-1snd ^{1}D transitions for times after excitation up to 50 ns, correspondinq to 4 - 5 modulation periods. The frequency obtained (with a precision of 2 - 5%) are compared with other experiments and theory. The frequencies are determined mainly by the singlet-triplet energy separations and mixing factors for the He I D-states. The results agree with the same parameters obtained from other recent level-crossing measurements in strong magnetic field mixing of the singlet-triplet states.

30652 **Collinear fast-beam laser spectroscopy experiment: Measurement of hyperfine structure and isotope shifts in Xe II.** Bingham, C.R.; Gaillard, M.L.; Pegg, D.J. (Tennessee Univ., Knoxville (USA); Oak Ridge National Lab., TN (USA)); Carter, H.K.; Mlekodaj, R.L. (UNISOR, Oak Ridge, TN (USA)); Cole, J.D. (Louisiana State Univ., Baton Rouge (USA)); Griffin, P.M. (Oak Ridge National Lab., TN (USA)). *Nuclear Instruments and Methods in Physics Research;* **202**: No. 1/2, 147-152(1 Nov 1982).

From 6. international conference on fast ion beam spectroscopy; Quebec (Canada) (17 - 20 Aug 1981).

As an initial test of a new laser spectroscopy system placed on line to the UNISOR isotope separator, the hyperfine structure of ^{131}Xe II and ^{129}Xe II in their 5d ^{4}Dsub(7/2) and 6p ^{4}Psub(5/2) levels has been investigated along with isotope shifts for sup(128-131, 134, 136)Xe relative to ^{132}Xe. The method utilizes the resonant absorption of laser light collinear to the beam of approx.= 50 keV Xe ions from the isotope separator. The spectra were produced by scanning a ring dye laser over a small frequency range and continuously monitoring the absorption through subsequent fluorescence of the ^{4}Psub(5/2) level. Laser and other electronic drifts during the course of the measurements were small and were monitored through simultaneous absorption of a portion of the laser light in an I_2 cell. The measured hyperfine constants and isotope shifts are compared with earlier results and delta$\langle r^2 \rangle$ are deduced from the isotope shifts.

30653 **Radiative lifetime of the 6p^{4}P^{0}sub(5/2) level in Xe II.** Pegg, D.J.; Gaillard, M.L.; Bingham, C.R. (Tennessee Univ., Knoxville (USA); Oak Ridge National Lab., TN (USA)); Carter, H.K.; Mlekodaj, R.L. (UNISOR, Oak Ridge, TN (USA)). *Nuclear Instruments and Methods in Physics Research;* **202**: No. 1/2, 153-158(1 Nov 1982).

From 6. international conference on fast ion beam spectroscopy; Quebec (Canada) (17 - 20 Aug 1981).

We have used a new collinear laser-ion beam technique to measure the radiative lifetime of the 6p ^{4}Psub(5/2)^0 level in Xe II. Our result of 7.95 +- 0.16 ns is in disagreement with previous results. The appartus was tested by making a similar measurement on the 6p ^{2}Psub(3/2) level in Ba II whose lifetime is well established. We found good agreement with the accepted value in this case.

30654 **Temperature dependence of the anomalous muonium hyperfine interaction and depolarization rate in silicon.** Blazey, K.W. (I.B.M. Research Lab., Zuerich, Switzerland); Brown, J.A.; Cooke, D.W.; Dodds, S.A.; Estle, T.L.; Heffner, R.H.; Leon, M.; Vanderwater, D.A. *Muon SR Newsletter;* No. 25, 1126-1145(15 Jun 1981).

The temperature dependence of the anomalous muonium hyperfine interaction has been measured in silicon between 5 K and 150°K. The hyperfine parameters are observed to decrease with increasing temperature. This is argued to result from interaction of the anomalous muonium center with the silicon host phonons. Above 120°K a rapid increase of the depolarization rate of the anomalous muonium with temperature is observed; these data are consistent with a Raman process causing the increased depolarization.

30655 **Photodissociative ionization of amorphous ice.** Rosenberg, R.A. (Michelson Lab., China Lake, CA); Rehn, V.; Jones, V.O.; Green, A.K.; Parks, C.C.; Loubriel, G.; Stulen, R.H. *Chemical Physics Letters;* **80**: No. 3, 488-494(15 Jun 1981). Contract AC04-76DP00789.

Within the energy range 17 $\leqq$ h nu $<$ 35 eV, the ionic species desorbed and their excitation spectra are reported. The only positive ion desorbed is H^+. A model for the surface is suggested which explains the absence of OH^+ desorption. The desorption mechanisms are discussed in terms of an energy analysis.

30656 **Development of theoretical methodology for large molecules.** Maggiora, G.M.; Christoffersen, R.E.; Yoffe, J.A.; Petke, J.D. (Univ. of Kansas, Lawrence). *Annals of the New York Academy of Sciences;* **367**: 1-16(22 May 1981).

A major advantage of the use of floating spherical Gaussian or vitals (FSGO) is the extreme rapidity with which the necessary quantum mechanical integrals can be evaluated. This advantage has been exploited in several quantum mechanical procedures for molecular electronic structure calculations, as described below. Several other properties of these functions have also been exploited, and have led to the development of semiclassical point charge and harmonic oscillator models capable of describing first and second order electromagnetic properties and intermolecular forces with reasonable accuracy in all cases and with considerably better accuracy than much more elaborate theoretical procedures in some cases. These applications are also described below. The primary intent of the current paper is to present an overview of some of the uses of FSGOs in the study of molecular electronic structure and properties and to indicate possible directions for future applications. No attempt will be made to include all possible applications. Rather, those applications of interest to the authors have been stressed. Hopefully, this paper will further stimulate the development of additional uses of these remarkable functions.

30657 **Comparison of scattering of low energy K^+ and Ar^+ from the Au(110) surface.** Overbury, S.H. (Oak Ridge National Lab., TN). *Surface Science;* **112**: 23-37(1981). Contract W-7405-ENG-26.

Angle resolved low energy ion scattering measurements on clean, reconstructed Au(110) using both K^+ and Ar^+ as probe ions are compared. Computer simulation results indicate that the backscattering of K and Ar are similar, but the observed energy and angular distributions of scattered K^+ and Ar^+ ions are different in almost every detail due to preferential neutralization of the Ar^+. The absolute intensities obtained for backscattered Ar^+ are more than three orders of magnitude lower than for K^+, making the alkali ion a far more sensitive probe. The Ar^+ energy distributions are distorted by preferential neutralization so that the strong multiple scattering features observed in the K^+ spectrum are absent in the Ar^+ spectrum. Striking differences between Ar^+ and K^+ are observed in the dependence of the scattering upon incident energy, incident azimuthal angle, and total scattering angle. The results are discussed with reference to the use of ion scattering as a probe of surface structure.

30658 **Long range interaction between a He atom and a semiconductor surface.** Vidali, G.; Cole, M.W. (Pennsylvania State Univ., University Park). *Surface Science;* **107**: L374-L378(1981). Contract AC02-79ER10454.

The dispersion interaction between a He atom and a solid has the form $V \sim C_3 z^{-3}$ at large distance. We calculate the value of C_3 for several cases (Ge, Si, GaAs, and diamond) using experimental results for $\epsilon_2(\omega)$. The model dielectric function of Brecken-

ridge, Shaw and Sher is found to yield good agreement with the value of C_9 obtained from experimental data.

30659 **Comments on the surface-excitation model.** Krohn, V.E. (Argonne National Lab., IL). *Surface Science;* **111**: L744-L746(1981).

Peter Williams has proposed a new theory of the secondary-ion emission process based on a model which he calls the surface-excitation model. A particularly interesting feature of this model is that the effective temperature of the excited surface atoms may fall with time after the impact of the primary ion. This paper gives an argument for this part of the model which is considerably simpler and may be more robust. The comparison of this part of the model with the available experimental data is also discussed but the comparison is sharply limited by the scantiness of the data.

30660 **Silicon $L_{2,3}VV$ Auger Lineshape and oxygen chemisorption study of Pd_4Si.** Bader, S.D. (Argonne National Lab., IL); Richter, L.; Brodsky, M.B.; Brower, W.E.; Smith, G.V. *Solid State Communications;* **37**: 729-732(1981).

The Si $L_{2,3}VV$ Auger Lineshape for Pd_4Si was measured and found to be in good agreement with the self-fold of the Si partial density of states model calculated by Riley et al. Oxygen chemisorption altered both the Auger lineshape and the HeI photoemission spectrum, especially near the Fermi energy.

30661 **Negative ions of polyatomic molecules.** Christophorou, LG. (Oak Ridge National Lab., TN). *Environmental Health Perspectives;* **36**: 3-32(Nov 1980). Contract W-7405-ENG-26.

In this paper general concepts relating to, and recent advances in, the study of negative ions of polyatomic molecules are discussed with emphasis on halocarbons. The topics dealt with in the paper are as follows: basic electron attachment processes, modes of electron capture by molecules, short-lived transient negative ions, dissociative electron attachment to ground-state molecules and to hot molecules (effects of temperature on electron attachment), parent negative ions, effect of density, nature, and state of the medium on electron attachment, electron attachment to electronically excited molecules, the binding of attached electrons to molecules (electron affinity), and the basic and the applied significance of negative-ion studies.

30662 **Angular momentum in ion-molecule reactions.** Meisels, G.G.; Verboom, G.M.L.; Weiss, M.J.; Hsieh, T.C. (Univ. of Nebraska, Lincoln). *Journal of the American Chemical Society;* **101**: No. 24, 7189-7195(1979). Contract AC02-76ER02567.

The long-range attractive forces which dominate ion-neutral reactions lead to angular momentum distributions peaking at much higher values than in neutral systems, and therefore much longer angular momentum effects may be anticipated. Angular momentum may be expected to significantly alter overall product distribution when competing paths differ. Such effects can certainly be expected to be largest where one of the reaction paths is loss of a hydrogen atom. It is precisely in such fragmentations that transition state theory has in the past found it necessary to employ tight transition states to obtain agreement with experiments. This suggests that models based purely on phase space arguments which neglect the nature and effect of the critical reaction complex, maybe inadequate. Therefore, a model and a formalism has been developed based on Rice-Ramsperger-Kassel-Marcus theory which is believed to be particularly suitable for the study of angular momentum effects. While it is applied here to the evaluation of branching ratios of competitive fragmentation pathways, in accord with interest in the effect of angular momentum on the overall reaction chemistry, the approach may also be modified to calculate other parameters. The model has been tested with fragmentation of $C_4H_8^+$ prepared in two distributions of rotational states but with nearly identical total energy.

30663 **(CEA-CONF—6155) Introduction to the Jastrow theory of a dense Fermi system.** Ripka, G. (CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France)). Nov 1981. 13p. (CONF-8110235—1). NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700181.

From Workshop on nuclear physics; Trieste, Italy (4 Oct 1981).

An overwiew is given of the theory of a strongly interacting dense system as liquid ^{3}He. The use of Jastrow wavefunction is explained in the simplest models which bear relevance to actual liquid ^{3}He.

30664 **Elementary excitations in liquid ^{3}He.** Skoeld, K. (Studsvik Science Research Lab., Nykoeping, Sweden); Pelizzari, C.A. *Philosophical Transactions of the Royal Society of London, Series B: Biological Sciences;* **290**: 605-616(1980).

The two isotopes of helium offer unique opportunities to test fundamental theories of quantum fluids. In liquid ^{4}He, a Bose liquid, the elementary excitations have been studied extensively over the last two decades by neutron inelastic scattering. Similar studies of liquid ^{3}He, the Fermi liquid counterpart of liquid ^{4}He, have become possible only recently. From the results obtained so far for normal liquid ^{3}He, the existence of zero sound as a well defined density excitation at finite wavevectors (q approx. = to q/sub F/) and finite temperatures (T approx. = to T/sub F/) has been verified and the spin fluctuation spectrum has been measured. By comparing the neutron scattering results for the density fluctuation spectrum with R.P.A. calculations with generalized polarization potentials, important information has been obtained about the effective spin-symmetric interaction between ^{3}He atoms. The spin fluctuation spectrum is in agreement with the paramagnon model if a value close to unity is assumed for the contact dimensionless paramagnon parameter I. This implies that the nuclear spin system in normal liquid ^{3}He is close to ferromagnetic.

30665 **(UCLA—10-P25-73) UCLA Particle Physics Research Group annual progress report.** Nefkens, B.M.K. (California Univ., Los Angeles (USA). Dept. of Physics). Aug 1981. 146p. NTIS, PC A07/MF A01. Order Number DE83010044.

Portions are illegible in microfiche products.

The objectives, basic research programs, recent results and continuing activities of the UCLA Particle Physics Research Group are presented. The objectives of the research are to discover, to formulate, and to elucidate the physics laws that govern the elementary constituents of matter and to determine basic properties of particles. A synopsis of research carried out last year is given. The main body of this report is the account of the techniques used in our investigations, the results obtained, and the plans for continuing and new research.

30668 (DOE/ER/40033—36) Diffraction dissociation and the direct hadronic interaction of the photon. Goulianos, K. (Rockefeller Univ., New York (USA)). 1983. Contract AC02-81ER40033. 13p. NTIS, PC A02/MF A01. Order Number DE83008891.

Portions are illegible in microfiche products.

We report a measurement of the inclusive diffraction dissociation cross section of ~ 100 GeV photons on hydrogen; we test the finite mass sum rule and, comparing with pion dissociation data, we test factorization. Our results are interpreted as providing a measurement of the direct, non vector meson dominance hadronic interaction of the photon.

30669 (DOE/ER/40085—1) Study of diquark fragmentation into Λ and Y^{*+} nu n and nu p interactions. Chang, C.C.; Mann, W.A.; Napier, A. (Tufts Univ., Medford, MA (USA); Illinois Inst. of Tech., Chicago (USA); Maryland Univ., College Park (USA); State Univ. of New York, Stony Brook (USA); Tohoku Univ., Sendai (Japan)). [nd]. Contract AC02-83ER40085. 12p. NTIS, PC A02/MF A01. Order Number DE83008893.

We apply a new method to determine the probability of the uu diquark from nu p interactions fragmenting as independent quarks. In particular, by assuming that all Λ's which do not come from Y^{*+}, N^{*+} or charmed baryons must come from independent fragmentation, we show this probability to be about 50%. We also provide information from nu n interactions on the fragmentation of ud diquarks into Λ's, and from this determine the probability of capturing a strange quark from the sea in the target region to be tau/sub s/ = 0.051 +- 0.013, about half the value found in the current region, γ/sub s/ = 0.12 +- 0.02. Overall Λ production rates in nu n and nu p reactions are (7.0 +- 0.8)% and (7.0 +- 1.2)% respectively, when cuts of W > 4 GeV and x/sub B/ > 0.2 are made on the data.

30670 (ITEF—111(1981)) Neutrino properties and interactions (1977-1980). Multileptonic events. Tsukerman, I.S. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1981. 57p. (In Russian). NTIS (US Sales Only), PC A04/MF A01. Order Number DE83701518.

Neutrino experiments resulting in several charged leptons produced in a final state are reviewed for the period from 1977 to 1980. The experiments have been carried out at practically all proton accelerators of the world. The total figure of registered multileptonic events outnumbered a thousand. All the experiments are broken into 6 groups : (1) the $\mu^{-+}\mu^{+-}$ events at facilities with electronic equipment; (2) the $\mu^{-+}l^{+-}$ events in bubble chambers; (3) final data on the $\mu^{-+}l^{+-}$ (V^0) events (where V^0 stands for neutral strange particles); (4) the μ^-l^- events; (5) the three-muon events, and (6) the four- leptonic events. Data on the strange particle multiplicities in the events are presented as well as data on antiquark sea derived therefrom. Theoretical interpretations of the experimental data are given within each group of experiments.

30671 (JINR—E-1-81-739) Charged particle multiplicity distribution in anti pp interactions at 22.4 GeV/c. Batyunya, B.V.; Boguslavsky, I.V.; Gramenitsky, I.M. (Joint Inst. for Nuclear Research, Dubna (USSR)). 1981. 8p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83701536.

Data are presented on topological cross sections for charged particle production in antiproton-proton inelastic interactions at 22.4 GeV/c obtained by scanning more than 260000 pictures from the bubble chamber "LUDMILA". Processing and unification of the results obtained at different laboratories, that permitted the effect of systematic errors to be substantially reduced, are described. The characteristics of the anti pp -annihilation process are obtained from the difference in the topological anti pp and pp cross sections.

30672 (JINR—R-1-81-504) Search for cumulative eta mesons in the πsup(-)Cu→eta(180deg)X reaction at 3.8 GeV/c. Arkhipov, V.V.; Aslanyan, P.Zh.; Astvatsaturov, R.G.; Kramarenko, V.A.; Malakhov, A.I.; Melkumov, G.L.; Plyashkevich, S.N.; Khachaturyan, M.N.; Khudaverdyan, A.G.; Chvyrov, A.S. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy). 1981. 6p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE83701510.

2γ-event energy spectrum has been measured within the 0<=T<=300 MeV kinetic energy range. 2γ-quanta from the eta meson decay were produced on copper nuclei by 3.8 GeV/c π^--mesons at 180 deg angle in laboratory system. The 2γ-event spectrum in the mass interval 549+-50 MeV is presented as invariant cross section $Ex(d^3\sigma/d\ anti\ p^3)$, where E and p are total energy and 2γ-event momentum, respectively. On the basis of experimental data the upper boundary for invariant cross section of meson generation in the π^- Cu→eta (180 deg)X reaction is determined with the 90% level of reliability.

30673 (KFK—3405-B) Investigation on the jet structure of hadronic events with a high energy photon. Knapp, J. (Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Inst. fuer Kern- und Teilchenphysik). Oct 1982. 85p. (In German). NTIS (US Sales Only), PC A05/MF A01. Order Number DE83750314.

Hadronic events including geometrically isolated high energy photons have been investigated by the CELLO detector at PETRA at $\sqrt{s}$=22 and $\sqrt{s}$=34 GeV. At $\sqrt{s}$=34 GeV the predominant source of these events was found to be initial state bremsstrahlung (75%). At $\sqrt{s}$=22 GeV are only 57% of the isolated photons coming from bremsstrahlung. The jet structure of these events has been tested using the jet measures thrust, sphericity, psub(T) and nsub(ch) as function of the energy of the photon. The agreement with QED and QCD predictions is good.

30674 (MPI-PAE/Exp.El.—110) Jets at PETRA. Oberlack, H. (Max-Planck-Institut fuer Physik und Astrophysik, Muenchen (Germany, F.R.). Inst. fuer Physik). Sep 1982. 64p. Available from Max-Planck-Institut fuer Physik und Astrophysik, Muenchen (Germany, F.R.).

From 2. international conference on physics in collisions; Stockholm (Sweden) (2 - 4 Jun 1982).

Recent results on formation and fragmentation of partons studied at PETRA by the five experiments CELLO, JADE, MARK J, PLUTO and TASSO are presented. Breaking of scale invariance in charged hadron production is observed to be compatible with QCD expectations. Hints of scale breaking are seen for individual particle species. π^0 inclusive spectra are found to be softer than πsup(+-) spectra, there are more Ksup(+-) than K^0, and baryon production is found to be copious. Gluon jets seem to be broader than quark jets as predicted by the Lund M.C. simulator. Long range charge correlations are confirmed and the average charge of quark jets is determined. Four-jet production is observed at a rate compatible with QCD predictions. Energy weighted angular correlations are compared to QCD model calculations. Finally it is found that the determination of the strong coupling constant depends on the type of fragmentation model used.

30675 Interaction of kaons with nucleons and nuclei. Dover, C.B. (Brookhaven National Lab., Upton, NY (USA)); Walker, G.E. (Indiana Univ., Bloomington (USA)). *Physics Reports: A Review Section of Physics Letters (Section C);* **89**: No. 1, 1-177(Sep 1982).

With 366 refs.

We review the status of experimental and theoretical investigations of kaon-nucleon and kaon-nucleus interactions and suggest

areas likely to be of interest as the field of kaon-nuclear physics develops. The properties of K^+N and K^-N amplitudes are discussed in detail. For low energy, the K^+N interaction is weak and slowly varying with energy. Therefore the K^+ should be an important source of information regarding nuclear structure. The overlap and complementarity of the K^+ as a nuclear probe are discussed in the context of other intermediate energy projectiles. In order to utilize Ksup(+-) beams for nuclear studies, more precise low and medium energy Ksup(+-)N data are also required, K^- nucleus reactions, primarily because of the coupling to strangeness -1 baryons (Λ, Σ) and Ysup(*) resonances, are expected to be more complicated than those of the K^+. For the further study of hypernuclei and Ysup(*) resonances in nuclei, intense variable energy K^- beams of good resolution are shown to be crucial. With such beams the study of hypernuclei could parallel the rich history of the study of nuclear structure. Besides providing a laboratory for studying hyperon-nucleon and hyperon-hyperon interactions the addition of an impurity (hyperon) into the many-baryon system can provide additional tests of the existing models of the nucleus. We examine the many facets of kaon-nuclear physics which have been explored with current techniques and existing facilities. However, we argue that the full realization of the potential of this field requires a 'kaon factory'.

30676 Search for neutrino oscillations at Fermilab. Baker, N.L.; Bregman, M.; Caroumbalis, D. (Brookhaven National Lab., Upton, NY). pp 295-300 of Gauge theories, massine neutrinos, and proton decay. Kursunogluy, B.; Perlmutter, A. New York, NY; Plenum (1981).

From Orbis scientiae conference; Fort Lauderdale, FL, USA (19 Jan 1981).

This article reports on a search for neutrino oscillations, particularly transformations of muon neutrinos into electron or tau neutrinos. After a discussion of the experimental procedure, several possible improvements are discussed. One suggestion is to investigate the frequency of electron events with varying neutrino energies, and another is to obtain data from 100 GeV protons, instead of the 400 GeV beam actually obtain data from 100 GeV protons, instead of the 400 GeV beam actually used. Each of these would permit an increase in sensitivity.

30677 (ANL-HEP-CP—82-68) Massive lepton pair production: what has QCD done to the classical Drell-Yan model. Berger, E.L. (Argonne National Lab., IL (USA)). Nov 1982. Contract W-31-109-ENG-38. 50p. (CONF-8210113—2). NTIS, PC A03/MF A01. Order Number DE83009517.

From American Physical Society meeting on pariticles and fields; College Park, MD, USA (28 Oct 1982).

Portions are illegible in microfiche products.

A report is presented of recent experimental and theoretical progress in studies of the production of massive lepton pairs in hadronic collisions. Among the topics discussed are deviations from scaling, the status of the proofs of factorization in the parton model, higher-order terms in the QCD expansion, the discrepancy between measured and predicted yields (K factor), high-twist terms, soft gluon effects, and transverse momentum distributions.

30678 (ANL-HEP-CP—82-72) Hadronic production of massive lepton pairs. Berger, E.L. (Argonne National Lab., IL (USA)). Dec 1982. Contract W-31-109-ENG-38. 63p. (CONF-8210107—4). NTIS, PC A04/MF A01. Order Number DE83008928.

From Workshop on Drell-Yan processes; Batavia, IL, USA (7 Oct 1982).

A review is presented of recent experimental and theoretical progress in studies of the production of massive lepton pairs in hadronic collisions. I begin with the classical Drell-Yan annihilation model and its predictions. Subsequently, I discuss deviations from scaling, the status of the proofs of factorization in the parton model, higher-order terms in the perturbative QCD expansion, the discrepancy between measured and predicted yields (K factor), high-twist terms, soft gluon effects, transverse-momentum distributions, implications for weak vector boson (W^{+-} and Z^0) yields and production properties, nuclear A dependence effects, correlations of the lepton pair with hadrons in the final state, and angular distributions in the lepton-pair rest frame.

30679 (ANL-HEP-CP—83-05) Measurement of α/sub s/. Clavelli, L. (Argonne National Lab., IL (USA)). Jan 1983. Contract W-31-109-ENG-38. 29p. (CONF-830134—2). NTIS, PC A03/MF A01. Order Number DE83009522.

From Orbis scientiae conference; Miami, FL, USA (17 Jan 1983).

We point out that a number of QCD tests, relatively free of obvious nonperturbative corrections and other theoretical problems, are now available in e^+e^- annihilation. By focusing on these tests, one can see the beginning of a confirmation of the running of the strong-coupling constant predicted by the renormalization group.

30680 (ANL-HEP-PR—82-18) Important high-twist contribution to prompt single-photon production. Berger, E.L. (Argonne National Lab., IL (USA)). Feb 1982. Contract W-31-109-ENG-38. 30p. NTIS, PC A03/MF A01. Order Number DE83009521.

Quantitative predictions are presented for a specific hard-scattering reaction $\pi N \rightarrow \gamma X$ in which both the incident meson and the produced prompt photon couple directly in the QCD amplitude. The process leads to a highly constrained class of events at large p/sub T/ in which the photon momentum is balanced by that of a recoil quark jet, with no spectator jet of final-state particles emerging along the beam axis. Normalized absolutely in terms of the electromagnetic form factor of the pion, F/sub π/(Q^2), the cross section provides a lower bound on the total p/sub T/$^{-6}$ high twist contribution to the inclusive prompt-photon yield.

30681 (IAE—3434/1) Mass relations in systems of SU (n) symmetric particles with account for multiparticle forces. Bychkov, A.S.; Gaponov, Yu.V. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1981. 15p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700232.

Mass operators are constructed on irreducible representations of SU(n) groups including the higst Casi.mir operators. By the rearrangement group methods their relation to multiparticle potentials in the identical particle systems is established. As an example application of a developed scheme for detailed description of SU(3)-multiplets in the hypernuclear system with account for SU(3) symmetry breaking is considered.

30682 (IC—79/2) Few-body system and particle resonances. Mubarak, A. (International Centre for Theoretical Physics, Trieste (Italy)). Jan 1979. 7p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83701487.

Techniques of few-body system in nuclear physics are exploited to analyze the spectrum of the T resonance and its family. Their relation to nuclear resonances are established so as to apply few-body dynamical techniques in the dynamical structure of particles carrying the truth quantum number.

30683 (IFVE-OTF—81-110) Inclusive photoproduction of charmed hadrons in VMD. Likhoded, A.K.; Slabospitsky, S.R.; Tolstenkov, A.N. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1981. 18p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83701508.

On the basis of the vector meson dominance model completed with the fusion model a mechanism of charmed hadron photoproduction has been developed. In the framework of this mechanism the total cross sections and inclusive spectra for charmed hardon photoproduction have been calculated. Anti D-meson yields have been obtained to be higher than D-meson ones at low energies, which is connected with pair production of anti D meson and Λsub(c) baryons.

30684 (IPNO-TH—81-41) Single Δ production contribution to proton inelasticity parameters. Cote, J.; Lacombe, M.; Loiseau, B.; Cottingham, W.N. (Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire). Oct 1981. 28p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE83701526.

We here present a meson exchange calculation of the nucleon-nucleon peripheral partial wave inelasticity parameters below 1 GeV lab kinetic energy. These theoretical estimates if used as constraints in future nucleon-nucleon phase shift analyses should reduce the ambiguities in the inelastic region.

30685 (ITEP—13(1982)) Dynamical model of the real part of the forward scattering amplitude. Levintov, I.I. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1982. 8p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700233.

The model is developed in which te real part of the elastic scattering amplitude is considered as one of t channels of diffraction dissociation. In terms of this model, the observed positivity Ref(0) at E> or approximately 10^2 GeV results in a conclusion that transparency of hadrons increases with the energy increase at large transverse distances ($Z_t > 2/m$) between valent quarks.

30686 (ITEP—36(1982)) U(1)-problem, THETA-term and CP-violation. Shabalin, E.P. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1982. 12p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700184.

The σ-model including the physical fields only and possessing the algebraic properties of the quantum chromodynamics (QCD) is considered. An expression for CP-odd part of σ- model Lagrangian which reflects the existence of theta-term in the QCD Lagrangian is obtained in terms of physical fields. A connection between U(1) problem resolution and physical CP-violation is established.

30687 (ITEP—108(1981)) Differences in hadronic cross-sections and the residues of secondary reggeons in the quark-gluon model for strong interactions. Kaidalov, A.B.; Volkovitsky, P.E. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1981. 23p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83701509.

In the framework of the quark-gluon picture for strong interactions based on the topological expansion and the string model, the relations between t differences of hadronic cross- section are obtained. The system of equations for the contribution of secondary reggeons (rho, ω, f, A_2 and phi and f' poles) to the elastic scattering amplitudes for arbitrary hadrons is derived. It is shown that this system has a factorized solution and the secondary reggeon residues for all hadrons are expressed in terms of the universal function g(t). The model predictions are in a good agreement with experimental data.

30688 (ITEP—142(1981)) Dynamics of the coupled quark and hadronic channels. Simonov, Yu.A. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1981. 48p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE83701517.

An extensive and detailed exposition is given of a new approach to the hadron-hadron dynamics at intermediate energies ($\sqrt{s}$ < several GeV) based on the inclusion of the quark compound bag (QCB) channels and the Jaffe-Low P matrix analysis. Two alternative methods are used: (1) the coupled QCB-hadrons channel formalism and (2) a nuclear-cluster-type approach, to derive essentially analogous final equations. The connection between P-matrix and S-matrix poles and between P-matrix poles and QCB eigenvalues is studied. The quark contents (i.e. the QCB percentage) of any quark-hadronic state can be defined unambigously and is shown to be around 15% for the deuteron and of the order of 50% for nuclear matter. Some recent results of the P matrix analysis are reviewed together with a new analysis of the S wave NN scattering. A conclusion is made, that the QCB states, even if wide and not seen as resonances, play a dominant role in the dynamics of hadrons at intermediate energies.

30689 (JINR—1-81-746) Verification of the hypothesis of Regge trajectory factorization in $\pi p p \to \pi^+(\pi^-\pi^0) + X$ reactions at 5 GeV/c. Antosh, Ya.; Shandor, L.; Rumyantsev, V.S.; Rusakovich, N.A. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Problems). 1981. 7p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700234.

Submitted to the Journal Sov. J. Nucl. Phys.

Results of comparison are presented between the experiment and linear relations between differential cross sections of inclusive reactions in the region of target fragmentation within the framework of approach based on the Muller-Regge phenomenology and on the hypothesis of the Regge trajectory factorization. The relation between the differential cross sections of the $\pi^- \to \pi^0 + X$ reaction for two different energy values has been derived. The differential cross sections of the $\pi^- p \to \pi^+/\pi^-/\pi^0 + X$ reactions have been calculated at 5 GeV/c on the basis of the above relations from data on the reactions of $K^+ p \to \pi^{+-} + X$ at 32 GeV/c, $\pi^+ p \to \pi^0 + X$ at 10.5 GeV/c and $K^- p \to \pi^{+-} + X$ at 8.25 GeV/c. There is an agreement between calculated and experimental differential cross sections of the $\pi^- p \to \pi^+/\pi^-/\pi^0 + X$ at 5GeV/c.

30690 (JINR—E-2-81-810) Renormalization and short-distance properties of gauge invariant gluonium and hadron operators. Dorn, H.; Robaschik, D.; Wieczorek, E. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1981. 15p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700235.

Gauge invariant nonlocal gluonium operators constructed with the help of phase factors in different representations are investigated. Renormalization and short distance properties turn out to be independent of representations used. The same problem is studied for hadron operators where the renormalization of the gauge invariant baryon operator is obtained. Furthermore composite operators distinguished by absence of renormalization are discussed.

30691 (JINR—E-2-81-832) Higher order corrections for the running coupling constant of QCD and an effective potential of the one-gluon exchange in t- and s-channels. Linkevich, A.D.; Savrin, V.I.; Skachkov, N.B. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1982. 16p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700236.

A simple formula is found, that approximates the one-gluon exchange amplitude with the "running" coupling constant expressions with taking into account of one-, two-, and three- loop contributions and with its generalizations to the case of massive quarks. The obtained formula can be considered as an effective one-gluon exchange amplitude. To this amplitude there corresponds in the relativistic configurational representation a simple Coulomb-like potential, which permits exact solutions of a relativistic two-particle equation for the wave function.

30692 (JINR-R—2-81-710) Relativistic model of diffraction scattering. Barashenkov, V.S.; Zadorozhnyj, A.M.; Kostenko, B.F.; Shmakov, S.Yu. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Computing Techniques and Automation). 1981. 10p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700237.

The relativistic generalization of Glauber theory for two interacting systems with an arbitrary number of constituents-nucleons or quarks is considered. Solutions of wave equation with relativistic harmonical potential being a generalization of three-dimensional Gaussian distributions are used as system t wave functions. The potential parameters are connected with the experimental data system masses and mean squared radii. A method giving an integral free expression for scattering amplitude is stated.

30693 **(JINR-R—4-81-774) Spin, masses and anomalous magnetic moments of charged leptons (the ring model).** Matora, I.M. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Neutron Physics). 1981. 4p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700238.

The exact analytical expressions of the ring model particle parameters are obtained. The model has the following features. The uniformly distributed on a torus surface massless charge e is circulating with a constant azimuthal velocity βc and the magnetic flux through a ring is quantized and equal $PHI_0 = hc/2e$. It is shown that the total magnetic momentum always contains an anomalous part, except of one case when β approximately 1-e/PHI_0, and g-factor equals 2. For the electron case the calculated model spin, electromagnetic mass and g-2/2 with $\beta sub(e) = 0.9988392$ turned out to be $h/4\pi$, 0.5110035 MeV/c^2 and 1.1596523×10^{-3} respectively. The same quantities for muon with $\beta sub(\mu) = 0.9888455$ equal $h/4\pi$, 105.65946 MeV/c^2 and 1.165936×10^{-3}, i.e., the model parameters coincide with the measured ones for both particles.

30694 **(KMU-HEP—82-03) QCD jets in e^+e^--annihilation and the transition into hadrons.** Ritter, S. (Karl-Marx-Universitaet, Leipzig (German Democratic Republic). Sektion Physik). Mar 1982. 41p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE83700239.

A model has been developed describing QCD jets in the leading logarithmic approximation (LLA) and the subsequent transition into hadrons via a chain decay model. Besides of the production of mesons, the model is also able to describe baryon production. Agreement with recent data from e^+e^--annihilation is found. This includes average multiplicities, average transverse momenta and transverse momentum distributions, longitudinal momentum distributions as well as particle production ratios π^{+-}:K^{+-}:p(antip), charge compensation probabilities and energy flux correlations. The model is compared to similar models developed by other authors.

30695 **(KMU-HEP—82-04) Second order QCD corrections to qantiq-annihilation into a lepton pair at large transverse momentum.** Perlt, H. (Karl-Marx-Universitaet, Leipzig (German Democratic Republic). Sektion Physik). Feb 1982. 24p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700240.

The theta(α/sub s//sup 2/) correction is presented to quark-antiquark-annihilation into a lepton pair at large transverse momentum. The corresponding hadron cross section difference $d\sigma/d^4q(pantip\text{-}pp) \rightarrow e^+e^- + x$ (q is the momentum of the lepton pair system) has been calculated. The correction to this cross section difference is found to be large. This essentially agrees with recently published results by Ellis, Martinelli and Petronzio. Two important approximations are used: the invariant mass of the two-gluon-system is put to zero, and only valence-valence quark scattering is considered.

30696 **(LA-UR—83-841) Hyperon and hypernuclear physics with intense beams.** Gibson, B.F. (Los Alamos National Lab., NM (USA)). 1983. Contract W-7405-ENG-36. 12p. (CONF-830339—1). NTIS, PC A02/MF A01. Order Number DE83010079.

From Theoretical symposium on intense medium energy sources of strangeness; Santa Cruz, CA, USA (19 Mar 1983).

Portions are illegible in microfiche products.

A brief examination of progress in the study of hypernuclear physics and the hyperon-nucleon interaction is presented. The use of Λ-hypernuclei in the study of conventional (nonstrange) nuclei is explored. The status of the hyperon-nucleon force problem is reviewed. Anecdotal results are discussed for baryon numbers 4 and 13. Σ-hypernuclei are discussed. Production of S = -2 hypernuclei is mentioned.

30697 **(LAPP-TH—53) Rapidity spectra in proton-proton and proton-antiproton scattering up to 540 GeV in a dual parton model.** Aurenche, P.; Bopp, F.W. (Grenoble-1 Univ., 74 - Annecy (France). Lab. de Physique des Particules). Jan 1982. 14p. (SI—81-26). NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700241.

Some recent data at the ISR and SPS colliders are discussed in terms of a multi-Pomeron exchange model formulated in the dual parton framework. Charged particle rapidity distributions, energy dependence of the central plateau, ratio of particle densities in proton-proton and antiproton-proton scattering and non diffractive multiplicities are successfully accounted for in the model.

30698 **Quark approach to Santilli's conjecture on hadronic structure.** Animalu, A.O.E. (Univ. of Nigeria, Nsukka). *Hadronic Journal;* **5**: No. 5, 1764-1773(Aug 1982). (CONF-820136—).

From 1. international conference on non-potential interactions and their Lie-admissible treatment; Orleans, France (5 Jan 1982).

Recently, Santilli conjectured that, because the so-called theorems of inconsistent quantization into Heisenberg's equations are activated when quarks are treated as physical point-particles, hadron phenomenology may demand different yet compatible models, namely: the established SU(3) classification of hadrons into multiplets and a different Bohr-type model of structure for each individual member of a multiplet, in which the quark hypothesis for hadronic constituents is to be abandoned ad replaced by a more general (Lie-admissible) notion of particle to express the state of mutual penetration of the wave packet of each constituent with those of the others. A quark approach to a Bohr model of hadronic bound states, in which such a state of mutual penetration of the strong charge volumes of the constituent quarks, occurs, is presented, the quarks being bound in a Yukawa-type central field approximated by its long-range part, $-g^2/r$, plus a meson mass term, in the limit $g^2 = 1$. A physical interpretation of the resulting hydrogenic-atom spectrum, based on an analogy with nuclear and atomic spectra is proposed and leads to a prediction of the mass ratio m/sub s//m/sub u/ of the strange to the light quarks in good agreement with the mass ratios of the members of the low-lying SU(3) multiplets.

30699 **Incompatibility of the quantum and relativity theories and a possible resolution.** Sachs, M. (State Univ. of New York, Buffalo). *Hadronic Journal;* **5**: No. 5, 1781-1801(Aug 1982). (CONF-820136—).

From 1. international conference on non-potential interactions and their Lie-admissible treatment; Orleans, France (5 Jan 1982).

This paper presents a comparison of the conceptual bases of the quantum theory and the theory of relativity, each considered as fundamental theories of elementary matter. From a study of the irreducible axiomatic bases of these respective approaches to elementary matter, it is concluded that they cannot peacefully co-exist because of logical incompatibility. Among the reasons discussed for this conclusion, one is the implication of the Hamiltonian form of quantum mechanics yielding an irreducible absolute frame of reference - that of the measuring apparatus - in the basic expression for the laws of elementary particles. This difficulty leads to logical inconsistency as well as a formulation of relativistic quantum field theory that is not demonstrably mathematically consistent. In spite of their logical incompatiability, it is argued that each of these theories logically requires the other, within its own framework. The conclusion is reached that, to make further progress in our understanding of elementary matter, it is necessary to abandon the axiomatic basis of one of these theories for the other, while keeping the formal structure of the abandoned theory as an accurate mathematical approximation (under special physical conditions) for a generalized form of the retained theory. An argument is presented for the author's retention of the theory of relativity as an authentic basis of elementary matter, and how its generalization is achieved by incorporating a fully (generally) covariant expression of the inertial manifestations of matter with its force manifestations.

30700 **Lie-admissible formulation of differential systems of even order.** Trostel, R. (Institut fuer Theoretische Physik, Berlin, Germany). *Hadronic Journal;* **5**: No. 5, 1893-1900(Aug 1982). (CONF-820136—).

From 1. international conference on non-potential interactions and their Lie-admissible treatment; Orleans, France (5 Jan 1982).

Using Santilli's construction of the Lie-admissible formulation of dynamical systems, and Whittaker's generalized theory of Hamiltonian systems dealing with Lagrangians depending on the

derivatives of the state variables to an arbitrary but finite order, we present a Lie-admissible formulation for materials of differential type of even order.

30701 **Foundations of the Lie-admissible Fock space of the hadronic mechanics.** Jannussis, A. (Univ. of Patras, Greece); Brodimas, G.; Sourlas, D.; Streclas, A.; Siafaricas, P.; Papaloucas, L.; Tsangas, N. *Hadronic Journal;* 5: No. 5, 1923-1947(Aug 1982). (CONF-820136—).

From 1. international conference on non-potential interactions and their Lie-admissible treatment; Orleans, France (5 Jan 1982).

In the present paper we study the case of coupling harmonic oscillators in hadronic mechanics. The non-canonical commutation relations of position and momentum operators are reduced, by Fock representation, to the known relations of Q-algebra. In the general case: $(A,A^+) = AA^+ - A^+QA$, of a Lie-admissible algebra, where Q is an operator, we can define new Fock creation and annihilation operators, which describe some particles only under certain conditions, which must be fulfilled by the operator Q. When we have a simple hadronic harmonic oscillator, the Q is a scalar less than 1, and we have energic saturation in eigenvalues spectrum. In this case the generalized uncertainty principle of Heisenberg is valid have energic saturation in eigenvalues spectrum. In this case the generalized uncertainly principle of Heisenberg is valid according to Santilli's theory. Finally, the coherent states of annihilation operator A are given and the Weyl displacement operator is generalized in Q-algebra.

30702 **Foundations of the hadronic generalization of the atomic mechanics. I. Generalization of Heisenberg's and Schroedinger's representations.** Santilli, R.M. (Inst. for Basic Research, Cambridge, MA). *Hadronic Journal;* 5: No. 4, 1194-1276(Jun 1982). (CONF-820136—). Contract AC02-80ER10651.

From 1. international conference on non-potential interactions and their Lie-admissible treatment; Orleans, France (5 Jan 1982).

This paper deals with the part of of the Hadronic Mechanics called of Lie-isotopic type, which: (1) is conceived for the exterior strong non-Hamiltonian treatment; (2) is based on the isotopic generalization of the associative algebra of operators on a Hilbert space; and (3) admits as a classical limit the recently achieved Birkhoffian generalization of the Hamiltonian Mechanics. We first review the Hadronic-isotopic covering of Heisenberg's representation with particular reference to the generalization of: Heisenberg's equations; canonical commutation rules; canonical quantization; Heisenberg's uncertainty principle; Planck's constant; Galilei's relativity; and the representation theory. A possible, single, unifying postulate for the covering theory is introduced. We then pass to the construction of the corresponding generalization of Schroedinger's representation. For this purpose, we first construct the Birkhoffian generalization of the Hamilton-Jacobi theory for local non-Hamiltonian systems. We then show that the latter theory admits a consistent quantization into a generalization of Schroedinger's equations. Some essential properties of the emerging hadronic generalization of the atomic wave theory, are presented. In particular, we identify the general solution of the hadronic wave packets under the most general possible local Hamiltonian and non-Hamiltonian forces, which has no counterpart in the Atomic Mechanics.

30703 **Foundations of the hadronic generalization of the atomic mechanics. II. Modular-isotopic Hilbert space formulation of the exterior strong problem.** Myung, H.C.; Santilli, R.M. (Inst. of Basic Research, Cambridge, MA). *Hadronic Journal;* 5: No. 4, 1277-1366(Jun 1982). (CONF-820136—). Contract AC02-80ER10651.

From 1. international conference on non-potential interactions and their Lie-admissible treatment; Orleans, France (5 Jan 1982).

This paper is devoted to a first formulation of the axiomatic Hilbert space foundations of the branch of the Hadronic Mechanics dealing with the exterior treatment of strong non-Hamiltonian systems, and which admits a Lie-isotopic algebraic character. In particular, we are interested in generalizing the conventional eigenvalue equations of the Atomic Mechanics into the broadest possible equations which are permitted by an associative algebra of opeators on a one-sided, modular, Hilbert space. The objective is made possible by the isotopic generalization of the associative algebra of operators A, B, ... on a Hilbert space, characterized by the product A*B - ATB, where T is a fixed, bounded, and nonsingular operator. By using the T-isotopic product, we first introduce a generalization of the Hermitean conjugate, transpose, Hermitean, skew-Hermitean, unitary, skew-unitary, projection, and exponential operators. We then pass to the isotopic generalization of the notion of determinant, trace, and eigenvalue of a linear operator. Some essential properties of this modular-isotopic formulation of the Hilbert space theory are identified. The results are then applied to Hadronic Mechanics. In particular, we present the hadronic generalization of a number of postulates of Atomic Mechanics, ranging from observables, states, and their time evolution, to total probability, its conservation in time, and the expectation values. We also prove that the isotopic generalization of Schroedinger's equations presented in Paper I are equivalent to the isotopic generalization of Heisenberg's equations.

30704 **Foundations of the hadronic generalization of the atomic mechanics. III. Bimodular-genotopic Hilbert space formulation of the interior strong problem.** Myung, H.C.; Santilli, R.M. (Inst. of Basic Research, Cambridge, MA). *Hadronic Journal;* 5: No. 4, 1367-1403(Jun 1982). (CONF-820136—). Contract AC02-80ER10651.

From 1. international conference on non-potential interactions and their Lie-admissible treatment; Orleans, France (5 Jan 1982).

This paper is devoted to a first formulation of the axiomatic Hilbert space foundations of the branch of the Hadronic Mechanics dealing with the interior strong non-Hamiltonian problem, that is, with the characterization of a particle under external unrestricted strong interactions, and which admits a Lie-admissible algebraic character. In particular, we are interested in extending the modular-isotopic generalization of the eigenvalue equations presented in the adjoining Paper II, into the broadest possible form permitted by a two-sided, bimodular (right and left) characterization of the Hilbert space. For this purpose we point out certain (yet unsolved) technical difficulties related to the preservation of the Hilbert space under a nonassociative algebra of operators. We then point out that these difficulties are absent when the theory is restricted to the original proposal by Santilli, the characterization of a hadron under extenal strong interactions via a birepresentation of a Lie-admissible algebra of operators on a bimodular Hilbert space in which each left and right action is associative-isotopic. In this way we achieve the Lie-admissible generalization of the contents of Paper II via the simple differentiation of the left and right isotopes, with products $AT(^+)B$ and $AT(^-)B$, where $T(^{+-})$ are fixed, generally different, bounded, and nonsingular operators. the Lie-isotopic modular formulations of Paper II result to be a particular case of the Lie-admissible bimodular formulations when $T(^+) = T(^-) = T$. The conventional atomic formulations result to be the simplest possible realization when $T(^+) = T(^-) = 1$.

30705 **Topological theory of electric charge.** Chew, G.F. (Lawrence Berkeley Lab., CA); Finkelstein, J.; McMurry, R.E. Jr.; Poenaru, V. *Physics Letters* [*Section*] *B;* 100: No. 1, 53-56(19 Mar 1981). Contract W-7405-ENG-48.

A recently-proposed topological theory of strong interactions is extended to electromagnetism. The values of the electric charges of both hadrons and leptons emerge naturally.

30706 **Jet production in diffractive dissociation of mesons and photons.** Randa, J. Boulder, CO; University of Colorado (1981). 9p. Contract AC02-76ER02114.

From 16. Recontre de Moriond; 21 Mar 1981 (Les Arcs, Savoie, France).

I consider the diffractive dissociation of photons and mesons into high-mass subsystems clearly separated in momentum space from fragments of the target proton. Such high-mass q anti q states should exhibit jet behavior. The mass and (decay) angle dependence of the mass section for production of these jets is predicted. The relative multiplicity of strange and charmed particles is also predicted and compared to that in e^+e^- jet production.

30707 **Can 35 pionic mass intervals among related resonances be accidental.** Mac Gregor, M.H. (Lawrence Livermore National Lab., CA (USA)). *Nuovo Cimento [Sezione] A;* **58**: No. 2, 159-192(21 Jul 1980).

Paper copy only, copy does not permit microfiche production7 refs.

By analogy with the situation that occurs in nuclear physics, one might expect to find the lowest-mass hadronic state - the pion - serving as a fundamental hadron building block. In line with this conjecture, and by a direct examination of the elementary-particle data 35 pionic mass intervals, π approximately -140 MeV, are observed among groups of related resonances. These pionic mass intervals, which occur in the narrow-width and S-state resonances, involve 50 elementary-particle states, or approximately 80% of the observed narrow-width states in the energy regions under examination. In particular, accurate pionic mass intervals are observed among the very-low-mass pseudoscalar mesons, the very-high-mass upsilon mesons, the intermediate-mass "charmonium" mesons, the "charmed" and uncharmed kaon states, the baryon and dibaryon excitations, and even the massive leptons. The accuracy and the universality of this result indicate, irrespective of theory, that the pion serves in some manner as a basic mass quantum in the generation (and the decay) of elementary-particle states, although this pionic excitation quantum does not follow the quantum number assignments that are ascribed to free pions.

6453 Particle Invariance Principles And Symmetries

30709 **(ANL-HEP-CP—82-29) QCD diffraction: a critical phenomenon reflecting both confinement and chiral-symmetry breaking.** White, A.R. (Argonne National Lab., IL (USA)). Jul 1982. Contract W-31-109-ENG-38. 24p. (CONF-8206117—7). NTIS, PC A02/MF A01. Order Number DE83009519.

From 13. international symposium on multiparticle dynamics; Volendam, Netherlands (6 Jun 1982).

Arguments are presented for studying soft diffractive physics at anti p-p colliders in terms of Critical Pomeron Reggeon Field Theory. It is emphasized that both confinement and chiral-symmetry breaking play a vital role in the occurrence of the Critical Pomeron in QCD. SU(3) is the unique strong-interaction gauge group giving the Critical Pomeron and the maximum number of quarks allowed by asymptotic freedom is required for criticality.

30710 **(JINR—E-2-81-521) System of related massless dipole ghost fields in two space-time dimensions.** Mikhov, S.G. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1981. 12p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83701485.

A couple of massless dipole ghost fields in two space-time dimensions is studied. The latter fields are related by the condition that the underlying zero norm fields, that are present in the equations of the Froissart model, are in fact a couple of dual scalar and pseudoscalar fields. The commutation relations and the explicit operator solution are obtained. The infrared problem is discussed in some detail. The Lorentz transformations of the fields under which the whole problem is invariant are obtained, thus proving the consistency of the regularization procedure.

30711 **(JINR—E-2-81-798) Dynamics of generalized coherent states. Pt. 2. Classical equations of motion.** Nikolov, B.A.; Trifonov, D.A. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1981. 13p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700188.

Using the Klauder approach the stable evolution of generalized coherent states (GCS) for some groups (SU(2), SU(1.1) and U(N)) is considered and it is shown that one and the same classical solution z(t) can correctly characterize the quantum evolution for many different (in general nonequivalent) systems. As examples some concrete systems are treated in greater detail: it is obtained that the nonstationary systems of the singular oscillator, of the particle motion in a magnetic field and of the oscillator with a friction all have stable SU(1.1) GCS whose quantum evolution is determined by one and the same classical function z(t). The physical properties of the constructed SU(1.1)GCS are discussed and it is shown particularly that in the case of discrete series Dsub(k)sup((+)) they are those states for which the quantum mean value coincides with the statistical one for an oscillator in a thermostat.

30712 **(JINR—R-2-81-665) Conformally invariant gauge fixing condition in quantum electrodynamics.** Stoyanov, D.Ts.; Sotkov, G.M. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1981. 11p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700190.

A conformally invariant gauge fixing condition in the case of electromagnetic interaction is suggested. A conformally invariant quantization scheme for the Maxwell equation is formulated on the base of this condition. In the space of physical states arises a representation of the conformal group. A new method of quantization is illustrated by an example of a free electromagnetic field. The special conformally transformations for the vectors from the physical space are obtained in an explicit form.

30713 **(JINR—R-2-81-707) Vacuum energy in the Ysub(d) Yukawa model in the strong coupling limit.** Efimov, G.V.; Ivanov, M.A. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1981. 44p. (In Russian). NTIS (US Sales Only), PC A03/MF A01. Order Number DE83700191.

The Ysub(α) Yukawa model describing the pseudoscalar interaction of a fermion field PSI(x) and a boson field PHI(x) in the d-measured space-time Rsup(α) is considered. Density of interaction Lagrangian is written down in the form Lsub(I)(x)==. ig anti PSI(x)γ_5PSI(x)PHI(x), where γ_5 - Euclidean matrices. S matrix written down in the form of a functional integral in the Euclidean metrics is investigated. The Euclidean γ matrices and PSI, anti PSI spinors are determined in that way to provide covariance of relativity theory of Euclidean rotations and complete coincidence of S matrices in a series of perturbation theory in the suggested and standard approaches. Behaviour of vacuum energy density in the range of a strong coupling g $\rightarrow$ infinity has been obtained.

30714 **(JINR—R-2-82-26) Quantum symmetries in particle interactions.** Shirkov, D.V. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1982. 10p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700194.

The concept of quantum symmetry is introduced. This is the symmetry which cannot be formulated without essential use of quantum ideas and notions. The role of three principles of quantum symmetry: renormalizability (or, probably, superrenormalizability) principle, local gauge symmetry principle, supersymmetry principle- in the development of quantum field theory is discussed. The conclusion is that these principles yield deterministic influence on the formation of modern theory of elementary interactions.

30715 **(KMU-HEP—82-05) Phase structure, magnetic monopoles and vortices in the lattice Abelian Higgs model.** Ranft, J.; Kripfganz, J.; Ranft, G. (Karl-Marx-Universitaet, Leipzig (German Democratic Republic). Sektion Physik). Apr 1982. 34p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE83700195.

We present Monte Carlo calculations of lattice Abelian Higgs models in 4 dimensions and with charges of the Higgs particles equal to q = 1, 2 and 6. The phase transitions are studied in the plane of the two coupling constants considering separately average plaquette and average link expectation values. The density of topological excitations is studied. In the confinement phase we find finite densities of magnetic monopole currents, electric currents and vortex currents. The magnetic monopole currents vanish exponentially in the Coulomb phase. The density of electric currents and vortex currents is finite in the Coulomb phase and vanishes exponentially in the Higgs phase.

30716 **(KMU-HEP—82-06) Short-distance expansion of Wilson loops, gluon condensation and Monte Carlo lattice results.** Kirschner, R.; Kripfganz, J.; Ranft, J.; Schiller, A. (Karl-Marx-Universitaet, Leipzig (German Democratic Republic). Sektion Physik). Apr 1982. 21p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700196.

The short-distance expansion of Wilson loops in terms of composite gluon operators (gluon condensate) is studied. The 2-loop perturbative contribution to Wilson loop ratios is evaluated. Monte-Carlo lattice results for SU(2) gluodynamics are analyzed in terms of this expansion. Consistent results for the gluon condensate are found.

30717 **(LYCEN—8164) Relativistic aspects of scalar fields (on some bases of wave mechanisms).** Louis, Gilbert. (Lyon-1 Univ., 69 - Villeurbanne (France). Inst. de Physique Nucleaire; Lyon-1 Univ., 69 (France)). 1981. 85p. (In French). NTIS (US Sales Only), PC A05/MF A01. Order Number DE83700197.

Thesis.

In this work, first we establish the general law of a scalar field transformation (in R or C) when we change of inertial frame, independently of any physical meaning associated to this field. Intuitively, if psi (r vector,t) is a field "seen" from the frame (R), we write the expression psi'(r'vector,t') which belong to the same field but "seen" from the frame (R') ((R) having the speed v vector in relation to (R')). For that, we use exclusively symmetry axioms of space-time-field. 1) In Galilean theory we find the law: psi'(r'vector,t') = psi (r vector,t) exp id(v vector r vector + 1/2 v^2t) with ral constant. Then, we show that Schroedinger equation, de Broglie formula lambda=h/p and the interpretation α=m/h are natural consequences of this law and of the least action principle. So in a strictly galilean framework we are led to a new vision of some basis of the quantum mechanics. We conclude on the epistemological interest of such a procedure by comparing it with some historical and conceptual aspects of special relativity and electromagnetism. 2) In Einsteinian theory we find the law: psi'(r'vector,t') = psi(r vector,t) exp idc [v vector/v.r vector shω+(chω-1)ct]. with ω=argtanh v/c. Then, a similar way to 1) led to an equivalent equation to Klein-Gordon's.

30718 **(SLAC-PUB—3053) Local supersymmetry and the problem of the mass scales.** Nilles, H.P. (Stanford Linear Accelerator Center, CA (USA); European Organization for Nuclear Research, Geneva (Switzerland)). Feb 1983. Contract AC03-76SF00515. 11p. (CONF-830139—1). NTIS, PC A02/MF A01. Order Number DE83008936.

From Workshop on problems in unification and supergravity; LaJolla, CA, USA (12 Jan 1983).

Spontaneously broken supergravity might help us to understand the puzzle of the mass scales in grand unified models. We describe the general mechanism and point out the remaining problems. Some new results on local supercolor are presented.

30719 **Lattice theory of quark confinement.** Rebbi, C. (Brookhaven National Lab., Upton, NY). *Scientific American;* **248**: No. 2, 54-65(Feb 1983).

The development of the Quark Model and the concept of quaark confinement are reviewed. Lattice Gauge Theory methods for approximating quantum chromodynamic calculations are described and Lattice Theory predictions for quark confinement are discussed. (KAW)

30720 **Dimensional reduction and flavor chirality.** Chapline, G. (California Univ., Livermore (USA). Lawrence Livermore National Lab.); Slansky, R. (Los Alamos National Lab., NM (USA). Theoretical Div.). *Nuclear Physics [Section] B;* **209**: No. 2, 461-483(27 Dec 1982).

We show that phenomenologically realistic flavor-chiral Yang-Mills-Higgs theories in 4 dimensions can be derived by dimensional reduction of 10-dimensional vectorlike and gauge theories, where the extra 6 dimensions form a compact coset space with scale size r. The dimensional reduction often implies a symmetry breaking pattern like that of the electroweak theory, in which case it is natural to propose r approx.= Gsub(F)sup(1/2). Quantum effects then determine the short-distance behavior of the theory, including any additional symmetry breaking.

30721 **Angular momentum paradoxes with solenoids and monopoles.** Lipkin, H.J. (Argonne National Lab., IL (USA); Fermi National Accelerator Lab., Batavia, IL (USA); Weizmann Inst. of Science, Rehovoth (Israel)); Peshkin, M. (Argonne National Lab., IL (USA)). *Physics Letters, [Section] B;* **118**: No. 4-6, 385-390(9 Dec 1982).

The Poynting vector produced by crossing the Coulomb field from a charged particle with a distant external magnetic field gives rise to a physical angular momentum which must be included in applications of angular momentum conservation and quantization. Simple examples show how the neglect of the return flux in an infinite solenoid or in two-dimensional models can lead to unphysical effects, how the Dirac charge quantization is obtained and can be modified by the presence of additional long range forces, and why the origin must be excluded in describing the motion of a point charge in the field of a fixed point monopole.

30722 **Plaquette formulation and the Bianchi identity for lattice gauge theories.** Batrouni, G.G. (California Univ., Berkeley (USA). Lawrence Berkeley Lab.). *Nuclear Physics [Section] B;* **208**: No. 3, 467-483(6 Dec 1982).

We extend Halpern's field-strength formulation and dual potentials (for continuum gauge theories) to abelian and non-abelian lattice gauge theories. New results include: (I) plaquette formulation of all lattice gauge theories, (II) the strong coupling expansion is seen as (a) a perturbation in dual links or (b) a gradual restoration of the lattice Bianchi identity. To leading order in the strong coupling expansion the lattice Bianchi identity is completely ignored. Geometrical interpretation of the lattice Bianchi identity is presented along with a discussion of the 'abelianization' of the non-abelian identity and its connection with gauge-invariant variables. For abelian theories we also show that the dual potential is Fourier conjugate to the Bianchi identity and that the Coulomb gas representation of these theories is easily obtained in this formulation.

30723 **Non-potential interaction and inseparable constituents of hadrons.** Sun, J. (Peking Univ., CHina). *Hadronic Journal;* **5**: No. 5, 1754-1763(Aug 1982). (CONF-820136—).

From 1. international conference on non-potential interactions and their Lie-admissible treatment; Orleans, France (5 Jan 1982).

The fundamental assumption on internal states of particles, as given in a joint paper, leads to the existence of nonpotential interaction between the non-particle constituents of hadrons. Such non-potential interaction causes the constituents of a hadron to be inseparable irrespective of the value and sign of energy. Thus, the constituents of a hadron can never be separated by bombardment, no matter how high the energy is; i.e. such a constituent can never appear as a particle. Such properties of constituents of hadrons come from their own essence, but not from any added requirement.

30724 **New approach to quantum field theory and a spacetime quantization.** Banai, M. (Central Research Inst. for Physics, Budapest, Hungary). *Hadronic Journal;* **5**: No. 5, 1812-1841(Aug 1982). (CONF-820136—).

From 1. international conference on non-potential interactions and their Lie-admissible treatment; Orleans, France (5 Jan 1982).

A quantum logical approach to achieve a sound kinematical picture for local quantum field theory is reviewed. A general language in the framework of axiomatic set theory is presented in which the local description can be formulated in almost the same form as quantum mechanics is formulated by von Neumann. The main physical implication of this approach is that quantization requires not only that of physical fields over M^4, but quantization of spacetime M^4 itself. A canonical quantization of M^4 can be implemented via the introduction of a spacetime quantum h, by imposing the commutation rules $[t, r] = ih$. Then, this rule implies $\Delta t\, \Delta r \geqq 1/2\ h$, i.e. a particle is not localizable better than 1/2 h. This uncertainty principle is compatible with Heisenberg's uncertainty principle, but it requires the generalization of Poincare symmetries to all unitary symmetries. Some indication shows that this approach might be successful in describing low lying hadronic phenomena. Santilli's original physical ideas whould partially be realized in this approach: the mutual overlaping of the wave functions of particles in short spacetime distances is (partially) taken into account by the introduction of h. Furthermore, locality loses its original meaning in the quantization of a RLFT. In this approach both the relativity and locality woudl become generalized in a RLQFT.

30725 **Unified theory of particle decay modes in electonic model.** Jian, C.X. *Hadronic Journal;* **5**: No. 4, 1517-1528(Jun 1982). (CONF-820136—).

From 1. international conference on non-potential interactions and their Lie-admissible treatment; Orleans, France (5 Jan 1982).

In a previous paper we have given a reasonable description of the total number of constituents (eletons and antieletons) in Santilli's structure model of hadrons. In this paper we shall extend these results to inlude decays of unstable hadrons. We shall continue to use the theory of stable and unstable groups with particular reference to Euler's function.

30726 **Gauge degrees of freedom of the LIE-admissible formulation of dynamical systems.** Trostel, R. (Institut fuer Theoretische Physik, Berlin, Germany). *Hadronic Journal;* **5**: No. 4, 1529-1545(Jun 1982). (CONF-820136—).

From 1. international conference on non-potential interactions and their Lie-admissible treatment; Orleans, France (5 Jan 1982).

We consider the classical motion of an eleton in viscous hadronic matter under variationally nonselfadjoint forces supposed to be of at most first differential type. By using Santilli's construction of the Lie-admissible algebra associated with the eletonic dynamics, we have found an isotopic degree of freedom induced by the set of gauge transformations originated by the ambiguity of the splitting of the forces into their selfadjoint and nonselfadjoint parts. Therefore, we obtain an equivalence class of Lie-admissible algebras acting on the functions of the phase space enlarged by time. All its representants differ by variationally selfadjoint forces incorporated into the nonselfadjoint force which is the crucial ingredient for constructing Santilli's matrix and from this the Lie-admissible algebra. Taking one representant whose selfadjoint force has been added to the nonselfadjoint force, means that one has tranformed the whole electro-dynamical force into the hadronic interaction force which seems philosophically reasonable. By dealing with systems whose nonselfadjoint forces vanish identically, we also obtain an equivalence class of Lie-admissible algebras incorporating a certain part of the given selfadjoint force ito Santilli's matrix. Evidently, there is one representant of this class of Lie-admissible algebras which is identical Lie itself. Taking other representants of this equivalence class would give us new examples of Lie-admissible algebras already at the conventional electrodynamical level.

30727 **(AECL—7328) Progress report, Physics Division, 1 January - 31 March 1981.** (Atomic Energy of Canada Ltd., Chalk River, Ontario. Chalk River Nuclear Labs.). May 1981. 125p. (PR-P—129). NTIS (US Sales Only), PC A06/MF A01. Order Number DE83700425.

The nuclear physics group used the on-line isotope separator to make direct mass doublet measurments for the first time and to identify a new α-emitter, hafnium-162. A new NaI(Tl) detector gave improved data on the multiplicities and intensities of continuum γ-rays in gadolinium-147. Beam profile data for the Fast Intense Neutron source showed that tritium loss from bombarded targets is not caused by beam hot-spots. Geometry studies on the High Current Proton Accelerator showed that proton fraction increases with improved arc and gas efficiencies. In conjunction with fertile-to-fissile conversion experiments at TRIUMF, two types of monitoring foils agreed within 2.5% with results obtained by two other laboratories. Neutron diffraction data for a single β-N_2 crystal at 0.4 MPa showed that its scattering density distribution and mean translation displacements have almost perfect spherical symmetry. A new non-linear stress analysis code was marketed.

30732 (ANL—83-4, pp 162-178) **Absorption and activation techniques in measurements of fast-neutron capture cross sections.** Bergqvist, I. (Univ. of Lund, Sweden). 1982. NTIS, PC A99/MF A01.

From NEANDC/NEACRP specialists meeting on fast-neutron capture cross sections; Argonne, IL, USA (20 Apr 1982).

The absorption and activation methods have been applied for a long time to systematic studies of fast neutron capture cross sections. Both methods are simple in principle but difficult in practice. The simplicity should ensure a wider use of the methods in particular for problems which may be complicated to approach with other methods. The difficulties encountered in absorption measurements are related to multiple scattering and resonance shielding effects. In activation experiments the influence of secondary low-energy neutrons causes the main problems.

30733 (ANL—83-4, pp 205-238) **Prompt gamma-ray detectors for the measurement of neutron capture cross-sections.** Gayther, D.B.; Thom, R.B. (Atomic Energy Research Establishment, Harwell, England). 1982. NTIS, PC A99/MF A01.

From NEANDC/NEACRP specialists meeting on fast-neutron capture cross sections; Argonne, IL, USA (20 Apr 1982).

A review is given of current techniques for detecting prompt gamma-radiation as a means of measuring total capture cross-sections. The discussion is generally restricted to systems with low or moderate gamma-ray energy resolution. Three classes of detector are considered: (1) the total absorption type; (2) detectors with efficiency proportional to gamma-ray energy; and (3) detectors of low efficiency and known gamma-ray response. Particular attention is given to the problems of background from reactions which compete with neutron capture, and the sensitivity of capture detectors to scattered neutrons. The extraction of capture yields from observed data is briefly considered.

30734 (ANL—83-4, pp 255-261) **Fast neutron capture cross section measurement with pulse-height weighting technique.** Yamamuro, N.; Igashira, M.; Shimizu, M. (Tokyo Inst. of Tech., JApan). 1982. NTIS, PC A99/MF A01.

From NEANDC/NEACRP specialists meeting on fast-neutron capture cross sections; Argonne, IL, USA (20 Apr 1982).

Neutron capture cross section measurement has been performed in the energy range from 200 to 610 keV with the pulse-height weighting technique. Monoenergetic neutrons were generated by ^{7}Li(p,n) reaction, and capture gamma-rays emitted from a sample were detected with a hollow cylindrical NE-213 scintillation detector. The volume of the scintillator is about 10 liter. An annular graphite gamma-ray absorber was inserted into the center of the detector as to make the weighting function straight as possible. To reduce te background, a cube of 40-cm boric-acid and paraffin surrounded the neutron source, and a hollow cylindrical shield consisting of 10-cm thick lead and 35-cm thick boric-acid and paraffin surrounded the detector. The capture cross sections of ^{165}Ho at the neutron energies of 200, 300, 460, and 610 KeV were obtained from the relative values to the ^{197}Au(n,γ) cross sections which were quoted from the ENDF/B-V file. The uncertainty of the data was 8 ~ 10%.

From Symposium on nuclear physics; Oaxtepec, Mexico (4 Jan 1983).

Portions are illegible in microfiche products.

Evidence is presented for the formation of a long-lived rotating dinuclear complex in the early stages of the collision between light heavy nuclei. A study of the variation of the total kinetic energy of the outgoing fragments with bombarding energy allows a determination of the average dinuclear separation prior to scission. At higher bombarding energies the study reveals that the system of the two colliding nuclei has reached a critical value of angular momentum beyond which it can not be trapped into an orbiting configuration.

30737 **(JINR—E-1-81-623) Inelastic interactions of p, d, ^{4}He and ^{12}C projectiles with light (CNO) and heavy (AgBr) nuclei at 4.5 GeV/c per nucleon.** Abdelsalam, A. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy). 1981. 11p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83701535.

The inelastic interactions of p, d, He^{4} and C^{12} with emulsion nuclei at 4.5 GeV/c per nucleon have been studied. A statistical method is offered to separate interactions with light (CNO) and heavy (AgBr) nuclei. In this case the integral distribution of the number particles from disintegration of target is used. The distributions of multiparticle production have been studied, and it has been found that a general relation for the dispersion as a function of multiplicity <nsub(s)> is D=(0.59+-0.03)<nsub(s)>-(0.03+-0.01) for different projectiles. The pseudorapidity distribution for p and C^{12} has been studied. It is shown that the number of emitted particles in the target fragmentation region is related to the number of interacting nucleons from the projectile nucleus.

30738 **Energy dependence of pion-induced isotensor double charge exchange.** Bland, L.C. (Pennsylvania Univ., Philadelphia (USA)); Fortune, H.T. (Los Alamos National Lab., NM (USA); Pennsylvania Univ., Philadelphia (USA)); Greene, S.J. (New Mexico State Univ., Las Cruces (USA)); Moore, C.F. (Texas Univ., Austin (USA)); Morris, C.L. (Los Alamos National Lab., NM (USA)). *Journal of Physics G: Nuclear Physics;* 8: No. 11, L173-L177(Nov 1982).

Data for ^{16}O(π^{+},π^{-})^{16}Ne at a laboratory angle of 5° as a function of energy are well fitted with a Breit-Wigner resonance at 169 +- 4 MeV, with a width of 66 +- 6 MeV. The same curve gives an acceptable fit to data for ^{24}Mg. The energy-dependent phase extracted from an earlier two-amplitude model of double charge exchange is consistent with these resonance parameters.

30740 (ANL—83-4, pp 394-416) **Status of structural material data in the resolved resonance region.** Rohr, G. (CEC-JRC, Geel, Belgium). 1982. NTIS, PC A99/MF A01.

From NEANDC/NEACRP specialists meeting on fast-neutron capture cross sections; Argonne, IL, USA (20 Apr 1982).

This review is mainly concerned with the accuracy aspect of neutron capture data for structural materials. As examples data sets of ^{54}Fe, ^{56}Fe and ^{57}Fe will be compared critically. The results of the investigation of the C_6D_6 detector performed at CBNM will be used to study the deviations in the different data sets. Recommendations to reduce the uncertainty of capture data and to improve the capture detectors using the weighting method will be given.

30741 (ANL—83-4, pp 417-430) **Neutron capture widths of s-wave resonances in ^{56}Fe, ^{58} ^{60}Ni and ^{27}Al.** Wisshak, K.; Kaeppeler, F.; Reffo, G.; Fabbri, F. (Kernforschungszentrum, Karlsruhe, Germany). 1982. NTIS, PC A99/MF A01.

From NEANDC/NEACRP specialists meeting on fast-neutron capture cross sections; Argonne, IL, USA (20 Apr 1982).

The neutron capture widths of s-wave resonances in ^{56}Fe (27.7 keV), ^{58}Ni (15.4 keV), ^{60}Ni (12.5 keV) and ^{27}Al (35.3 keV) have been determined, using a setup completely different from LINAC experiments. A pulsed 3 MV Van de Graaff accelerator and the ^{7}Li(p,n) reaction served as a neutron source. The proton energy was adjusted just above the reaction threshold to obtain a kinematically collimated neutron beam. This allowed to position the samples at a flight path as short as ~ 90 mm. Capture events were detected by three Moxon-Rae detectors with graphite, bismuth-graphite and pure bismuth converter, respectively. The measurements were performed relative to a gold standard. The setup allows to discriminate capture of scattered neutrons completely by time of flight and to use very thin samples (0.15 mm) in order to reduce multiple scattering. After correction for deviations of the detector efficiency from a linear increase with gamma-ray energy, the results obtained with different detectors agree within their remaining systematic uncertainty of ~ 5%. Only preliminary results are presented.

30742 (ANL—83-4, pp 431-436) **Evaluation of the radiation width of the 27.7 keV resonance in ^{56}Fe.** Allen, B.J. (AAEC Research Establishment, Sutherland, Australia). 1982. NTIS, PC A99/MF A01.

From NEANDC/NEACRP specialists meeting on fast-neutron capture cross sections; Argonne, IL, USA (20 Apr 1982).

A critical review is given of measurements of the radiation width of the 27.7 keV resonance in ^{56}Fe. An evaluation of results yields a recommended value of $\Gamma\ \gamma$ + 1.00 +- 0.04 eV for this resonance.

30743 (ANL—83-4, pp 564-569) **Fast-neutron capture in structural materials.** Froehner, F.H. (Kernforschungszentrum, Karlsruhe, Germany). 1982. NTIS, PC A99/MF A01.

From NEANDC/NEACRP specialists meeting on fast-neutron capture cross sections; Argonne, IL, USA (20 Apr 1982).

The discussions of developments in the field of capture data of structural materials since the 1977 Geel meeting were mainly based on the invited paper presented by G. Rohr and on information from the other participants about their own activities. There was not much input about recent work in japan, where the new version JENDL-2 of the Japanese Evaluated Nuclear Data Library has been issued, or on the resonance analysis work on iron and nickel isotopes going on at ORNL. Moreover, the discussion was restricted to the three principal structural material elements Cr, Fe and Ni. Some of the remaining structural materials such as Zr and Mo were covered by the Working Group on Fission Product Nuclides.

30744 **(IPNO-PhN—81-11) Two-step processes in the ^{40}Ca(α,^{3}He)^{41}Ca reaction.** Fortier, S.; Maison, J.M.; Picot, P.; Gales, S.; Hourani, E.; Schapira, J.P. (Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire). 1981. 23p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83701527.

The ^{40}Ca(α, ^{3}He) reaction has been studied at 36 MeV incident energy. About fifty levels have been observed up to 7.1 MeV excitation energy and angular distributions were measured from 6 deg to 60 deg, using a split-pole spectrometer. A local zero-range DWBA analysis has been carried out, and the deduced l-assignments and spectroscopic factors are compared with those obtained from previous neutron stripping experiments. Core-excited states in ^{41}Ca with a[3$^-$, f7/2], [2$^+$, f7/2] and [5$^-$, f7/2] component previously observed in inelastic scattering experiments, are selectively excited by the (α, ^{3}He) reaction. Their angular distributions are compared with coupled-reaction-channel calculations, assuming a pure two-step reaction mechanism. The agreement between theory and experiment may be considered as rather satisfactory for a number of levels. In particular the $1/2^+$ and $3/2^+$ levels and the high spin states with Jsup(π)=$9/2^-$, $11/2^+$, $15/2^+$ and $17/2^+$ are successfully described within the framework of the weak-coupling model.

30745 (ANL—82-80, pp 571-581) **Cascade neutron yields from energetic heavy ion interactions.** Barbier, M.M. (Marcel M. Barbier, Inc., Herndon, VA). Jan 1983. NTIS, PC A99/MF A01.

From 6. annual international collaboration of advanced neutron sources meeting; Argonne, IL, USA (28 Jun 1982).

Experimental data on heavy ion production of cascade neutrons (neutron energy above 20 MeV) is collected and reviewed. Cascade neutron production figures per unit solid angle are given as a function of emission angle for projectiles up to Ar 40 and incident energies up to 2100 MeV/AMU. Total cascade neutron yields per event are derived and found not to increase when going to heavier projectiles.

30746 **(ANL—83-4) Fast-neutron capture cross sections.** Smith, A.B.; Poenitz, W.P. (eds.). (Argonne National Lab., IL (USA); Organization for Economic Co-Operation and Development, 75 - Paris (France)). 1982. Contract W-31-109-ENG-38. 603p. (NEANDC(US)—214/L; CONF-820438—). NTIS, PC A99/MF A01. Order Number DE83008920.

From NEANDC/NEACRP specialists meeting on fast-neutron capture cross sections; Argonne, IL, USA (20 Apr 1982).

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

SEparate abstracts were prepared for 30 of the 39 papers presented. Nine papers wre previously included in the data base. (WHK)

30747 (ANL—83-4, pp 63-66) **El gamma strength from (γ,n) measurement in ^{95}Mo.** Coceva, C.; Magnani, M.; Stefanon, M. (ENEA, Bologna, Italy). 1982. NTIS, PC A99/MF A01.

From NEANDC/NEACRP specialists meeting on fast-neutron capture cross sections; Argonne, IL, USA (20 Apr 1982).

Threshold photoneutron measurements of the reaction ^{95}Mo(γ,n$_0$) were carried out in the neutron-energy interval 50 to 300 keV. Gamma-rays were obtained by bremsstrahlung of electrons accelerated by a low-energy linac; neutron energy was measured by time-of-flight. The cross-section is obtained by calibration with known ^{208}Pb(γ,n) resonances. An estimate of the electric dipole average gamma strength is deduced.

30748 (ANL—83-4, pp 133-143) **Total γ-ray spectra and isomeric ratio calculations in fast neutron radiative capture.** Reffo, G. (ENEA, Bologna, Italy). 1982. NTIS, PC A99/MF A01.

From NEANDC/NEACRP specialists meeting on fast-neutron capture cross sections; Argonne, IL, USA (20 Apr 1982).

Estimates of total γ-ray spectra and isomeric ratios have been attempted in the framework of the optical and statistical models for neutron radiative capture. The role of optical model, of Brink-Axel and Weisskopf assumptions as well as of the most important parameters have been investigated. The results of these calculations satisfactorily agree with experimental information in all cases considered. Spectra calculations were used in relative neutron capture measurements for correction of systematic uncertainties due to non-linear efficiency of the Moxon-Rae detector. Data on the calculated total γ-ray spectra and the corresponding integrated cross sections are shown for the isotopes investigated. The impact of parameters involved is discussed.

30749 (ANL—83-4, pp 179-185) **Absolute measurements of the fast neutron capture cross section of ^{115}In.** Grady, D.J.; Knoll, G.F.; Robertson, J.C. (Univ. of Michigan, Ann Arbor). 1982. NTIS, PC A99/MF A01.

From NEANDC/NEACRP specialists meeting on fast-neutron capture cross sections; Argonne, IL, USA (20 Apr 1982).

The ^{115}In(n,γ)/sup 116m1/In cross section has been absolutely determined at neutron energies of 23, 265 and 964 keV. These energies are the median neutron energies of the three photoneutron sources. Sb-Be, Na-CD_2 and Na-Be, utilized in this work. The measurements are independent of other cross section data except for corrections amounting to less than 10%. Independent determinations of the reaction rate, detector efficiency, neutron source strength, scalar flux and target masses were performed. Reaction rates were determined by beta counting of the /sup 116ml/In decay activity using a 4π gas flow proportional counter. Detector efficiency was measured using 4π β-γ coincidence counting techniques and the foil absorber method of efficiency extrapolation for correction of complex decay scheme effects. Photoneutron source emission rates were determined by intercomparison with the NBS-II calibrated ^{252}Cf spontaneous fission neutron source in the University of Michigan Manganese Bath. The normalized scalar flux was calculated from the neutron emission angular distribution results of the Monte Carlo computer program used to model neutron and gamma transport in the source. Target mass determinations were made with a microbalance. Correction factors were applied for competing reaction activities, neutron scattering from experiment components, room-return induced activities, spectral effects in the manganese bath and the neutron energy spectra of the photoneutron sources. Experimental cross section results were normalized to the source median energy using energy spectra d cross section shape data. The absolute cross sections obtained for the ^{115}In(n,γ)/sup 116ml/In reaction were 588 +- 12, 196 +- 4 and 200 +- 3 millibarns at 23, 265 and 964 keV, respectively.

30750 (ANL—83-4, pp 186-195) **Measurements and model calculations of the ^{110}Cd(n,γ)/sup 111m/Cd cross section.** Smith, D.L.; Meadows, J.W.; Moldauer, P.A.; Poenitz, W.P. (Argonne National Lab., IL). 1982. NTIS, PC A99/MF A01.

From NEANDC/NEACRP specialists meeting on fast-neutron capture cross sections; Argonne, IL, USA (20 Apr 1982).

The cross section for the ^{110}Cd(n,γ)/sup ^{111}m/Cd reaction has been measured in the energy 0.14 to 1.5 MeV by means of activation. Both natural cadmium and ^{110}Cd- and ^{111}Cd-enriched samples were used in the measurements in order to distinguish the capture activation reaction from the ^{111}Cd(n,n')/sup 111m/Cd reaction, which becomes involved due to the presence of ^{111}Cd in the samples. Optical, statistical and gamma-ray cascade model calculations were performed in order to explain the energy dependence of the capture activation cross section.

30751 (ANL—83-4, pp 196-204) **Neutron-capture-activation cross sections of $^{94\ 96}$Zr and $^{98\ 100}$Mo at thermal and 30 keV energy.** Wyrick, J.M.; Poenitz, W.P. (Argonne National Lab., IL). 1982. NTIS, PC A99/MF A01.

From NEANDC/NEACRP specialists meeting on fast-neutron capture cross sections; Argonne, IL, USA (20 Apr 1982).

Neutron-capture cross sections of $^{94\ 96}$Zr and $^{98\ 100}$Mo were measured relative to the standard-capture cross section of gold at thermal and 30 keV neutron energies using the activation technique. The reported values are based upon available decay-scheme information.

30752 (ANL—83-4, pp 239-247) **Fast-neutron capture-cross-section measurements with the Argonne National Laboratory large-liquid-scintillator tank.** Poenitz, W.P. (Argonne National Lab., IL). 1982. NTIS, PC A99/MF A01.

From NEANDC/NEACRP specialists meeting on fast-neutron capture cross sections; Argonne, IL, USA (20 Apr 1982).

Measurements of the neutron-radioactive-capture cross sections of Y, Zr, Mo, Ag, Cd, In, Sb, La, Eu, Gd, Tb, Dy, Er, Yb, Hf, W, Re, and Pt in the 0.5 to 4.0-MeV-energy range are presented. A large-liquid-scintillator detector was used for detecting the capture events. A grey neutron detector was used as neutron monitor. The reported cross sections are relative to the capture cross section of gold at 0.5 MeV. Where prior data exist the present data are lower for most elements. However, good agreement was obtained with very recent results reported by the group from Bruyeres-le-Chatel.

30753 (ANL—83-4, pp 262-274) **Gamma-rays from radiative capture reactions in ^{133}Cs, ^{181}Ta and ^{197}Au.** Yamamuro, N. (Tokyo Inst. of Tech., Japan); Igashira, M.; Shirayanagi, H.; Fujita, Y.; Kobayashi, K. 1982. NTIS, PC A99/MF A01.

From NEANDC/NEACRP specialists meeting on fast-neutron capture cross sections; Argonne, IL, USA (20 Apr 1982).

Gamma-ray spectra following neutron capture in ^{133}Cs, ^{181}Ta and ^{197}Au have been measured at the neutron energy from 1.5 to 75 keV using linac-TOF method. A sample was located at 12 m from the neutron source, and a pair of deuterated benzen (C_6D_6) liquiid scintillation detectors with 11 cm diam by 5 cm thick was set at the both sides of sample. Response functions of the detector were calculated by a Monte-Carlo method, and the energy resolution of the detector was determined by comparing the calculated energy deposit spectra with the measured spectra. To unfold the gamma-ray spectrum from the observed one, a 93 x 256 gamma-ray response matrix was generated by interpolation from the response functions. The capture gamma-ray spectra for cesium, tantalum and gold were obtained by means of the unfolding code FERDOR. The spectra in gold and cesium show the 5.5 MeV anomaly, as expected from other experiments. The gamma-ray strength functions were calculated by the spectrum-fitting method. As the result of this calculation in gold, it was found that the better spectrum fitting was obtained if the two pigmy resonances were assumed to exist at 5 MeV and 6 MeV.

30754 (ANL—83-4, pp 437-463) **Differential fission product capture cross section measurements since Bologna.** Block, R.C. (Rensselaer Polytechnic Inst., Troy, NY). 1982. NTIS, PC A99/MF A01.

From NEANDC/NEACRP specialists meeting on fast-neutron capture cross sections; Argonne, IL, USA (20 Apr 1982).

Differential capture cross section measurements of fission products are reviewed for the time period since the 1979 Bologna Specialist's Meeting on Neutron Cross Sections of Fission Products. Fission product capture data from nine laboratories in seven countries have been reported, and these results are discussed in regard to fast reactor applications.

30755 (ANL—83-4, pp 464-472) **Average capture cross section of the fission product nuclei ^{105}Pd and ^{108}Pd.** Rohr, G.; Bastian, C.; Cornelis, E.; Shelley, R.; van der Veen, T.; Vanpraet, G. (CEC-JRC, Geel, Belgium). 1982. NTIS, PC A99/MF A01.

From NEANDC/NEACRP specialists meeting on fast-neutron capture cross sections; Argonne, IL, USA (20 Apr 1982).

Neutron capture cross section measurements on enriched stable isotopes have been performed at the 30 m station of Gelina in the energy range of 10 eV up to 600 keV. The neutron flux shape was determined with a 0.5 mm ^{6}Li-glass scintillator and a 0.6 mm thick $^{10}B_4C$-slab. The time dependent background was evaluated by using the yields from a 0.5 mm ^{208}Pb capture sample. The present

data analysis covers the energy range between 10 keV and 300 keV.

30756 (ANL—83-4, pp 473-517) **Status of recent fast capture cross section evaluations for important fission product nuclides.** Gruppelaar, H. (Netherlands Energy Research Foundation, Petten). 1982. NTIS, PC A99/MF A01.

From NEANDC/NEACRP specialists meeting on fast-neutron capture cross sections; Argonne, IL, USA (20 Apr 1982).

A comparison is made between recent evaluations of fission-product cross sections as given in the CNEN/CEA, ENDF/B-IV, ENDF/V-V, JENDL-1, RCN-2 and RCN-3 data libraries. The intercomparison is restricted to 24 important fission products in a fast power reactor. The evaluation methods used to obtain the various data files are reviewed and possible shortcomings are indicated. A survey is given of the experimental data based used in the various evaluations. Some graphs are included showing the new ENDF/B-V and RCN-3 fastcapture cross-section evaluations. Further intercomparisons are made by means of multi-group and one-group cross sections. It is shown that lumped fission-product cross sections calculated from the most recent versions of the data files are in quite good agreement with each other. This review concludes with a discussion on observed discrepancies and requests for new measurements. 78 references.

30757 (ANL—83-4, pp 570-585) **Fast-neutron capture cross sections for the most important fission-product nuclei.** Gruppelaar, H. 1982. NTIS, PC A99/MF A01.

From NEANDC/NEACRP specialists meeting on fast-neutron capture cross sections; Argonne, IL, USA (20 Apr 1982).

The main activity of the fission-product (FP) Working Group was the discussion of the current status of neutron capture knowledge of the most important FP nuclides, including the formulation of recommendations toward improved understanding. The results of the discussion are summarized. General conclusions and recommendations are given. The status of integral data is summarized by R. Anderl; and nuclear models and calculations are reviewed by D. Gardner and G. Reffo.

30758 (ANL—83-4, pp 586-589) **Some summary reflections.** Smith, A.B. (Argonne National Lab., IL). 1982. NTIS, PC A99/MF A01.

From NEANDC/NEACRP specialists meeting on fast-neutron capture cross sections; Argonne, IL, USA (20 Apr 1982).

A brief review of some of the topics discussed at the conference are given in this concluding speech for the conference. (WHK)

30759 (DOE/ER/10418—T3) **Light particle and gamma ray emission measurements in heavy ion reactions. Progress report.** Petitt, G.A. (Georgia State Univ., Atlanta (USA). Dept. of Physics and Astronomy). 1983. Contract AS05-79ER10418. 16p. NTIS, PC A02/MF A01. Order Number DE83010127.

Portions are illegible in microfiche products.

Studies of neutron and charged particle emission in heavy ion reactions using the facilities at the HHIRF and the new computer facilities at Georgia State are briefly described. A progress report for 1982 to 1983 is combined with a proposal for work to be performed during 1983 to 1984. Present activities and immediate plans for a run already approved by the Program Advisory Committee of the HHIRF are discussed. (WHK)

30760 (LUIP—8205) **Disintegration of Nuclei in Violent Heavy Ion Interactions at 55A MeV - 110A MeV.** Jakobsson, B.; Joensson, G.; Lindkvist, B; Oskarsson, A. (Lund Univ. (Sweden). Fysiska Institutionen). May 1982. 45p. (LUNFD6/NFFK—7018/1-31(1982)). NTIS (US Sales Only), PC A03/MF A01. Order Number DE83700201.

High multiplicity ^{12}C induced reactions in Ag(Br) at energies between 55A MeV and 110A MeV have been selected and investigated event by event in nuclear emulsions. Only a fraction of these events can possibly be described in terms of a normal thermal spectator- participant mechanism. Several events exhibit a violent breakup into several light and medium-mass fragments. A strong suppression of projectile associated proton- and composite particle emission in the forward direction is found in comparison with inclusive spectra. A large part of the low energy protons originates from a very slow source, with a velocity comparable to that of the heaviest fragment. The parallel fraction of the c.m. energy in each event, which is governed by the more energetic protons, has a broad distribution with a mean value of 0.61 and thus with no signals of collective production mechanisms.

30761 **IBA calculations near the Z=64 subshell.** Gill, R.L.; Casten, R.F.; Warner, D.D. (Brookhaven National Lab., Upton, NY (USA). Physics Dept.); Brenner, D.S. (Clark Univ., Worcester, MA (USA). Dept. of Chemistry); Walters, W.B. (Maryland Univ., College Park (USA). Dept. of Chemistry). *Physics Letters, [Section] B;* **118**: No. 4-6, 251-255(9 Dec 1982).

It has recently been shown that the effects of the Z = 64 subshell are important for nuclides with N <= 88 but disappear as N approaches 90, due to the influence of neutron-proton interactions. IBA-2 calculations show excellent agreement with experimental energy systematics if the effective reduction in valence bosons caused by the Z = 64 subshell closure is explicitly included. The deduced parameters then behave as predicted by the microscopic basis of the IBA-2 model, in contrast with previous studies.

30762 **Nuclear structure and heavy-ion fusion.** Stokstad, R.G. (California Univ., Berkeley (USA). Lawrence Berkeley Lab.). *Nukleonika;* **26**: No. 3, 373-424(1981).

From 13. Summer school in nuclear physics; Mikolajki (Poland) (1 - 13 Sep 1980).

95 refs.

A series of lectures is presented on experimental studies of heavy-ion fusion reactions with emphasis on the role of nuclear structure in the fusion mechanism. The experiments considered are of three types. The fusion of lighter heavy ions (A<=20) at subcoulomb energies is studied with in-beam γ-ray techniques, the subbarrier fusion of ^{16}O and ^{40}Ar with the isotopes of samarium is detected out of beam by x-radiation from delayed activity, and measurements at very high energies, again for the lighter ions, employ direct particle identification of evaporation residues. The experimental data are compared with predictions based on the fusion of two spheres with the only degree of freedom being the separation of the centers, and which interact via potentials which vary smoothly with changes in the mass and charge of the projectile and target. The data exhibit large deviations from the systematic predictions.

30763 **Level scheme of ^{160}Yb and the predicted SU(3)-O(6) transition in the N=90 isotones.** Garrett, C.; Rastikerdar, S.; Gelletly, W. (Manchester Univ. (UK). Schuster Lab.); Warner, D.D. (Brookhaven National Lab., Upton, NY (USA)). *Physics Letters, [Section] B;* **118**: No. 4-6, 292-296(9 Dec 1982).

The properties of the low-lying positive parity states of $_{70}{}^{160}Yb_{90}$ are reported and compared with predictions of the IBA-2 model based on parameters extrapolated from earlier calculations on the lighter, N = 90 isotones. There is good agreement between theory and experiment. The results confirm the predicted transition between the SU(3) and O(6) limits of the IBA for the N = 90 isotones, and point to a new region of O(6) symmetry.

30764 (ANL—83-4, pp 144-161) **Gold standard capture cross section from 100 keV to 15 MeV.** Ryves, T.B. (National Physical Lab., Teddington, England). 1982. NTIS, PC A99/MF A01.

From NEANDC/NEACRP specialists meeting on fast-neutron capture cross sections; Argonne, IL, USA (20 Apr 1982).

The capture cross section of gold is now generally accepted as the principal reference standard, and therefore in this review only gold is considered. Recent measurements of the gold capture cross section in the unresolved region are discussed and compared with the ENDF/B-V evaluation. It is concluded that in the energy interval 100 to 2000 keV the present uncertainty in the evaluation is +-8%, in the interval 2 to 3.5 MeV the uncertainty is +-4%, in ther interval 3.5 to 14 MeV more measurements are needed before a realistic error can be assigned, and from 14 to 15 MeV the uncertainty is +-10%. Several recommendations for future work have been made.

30765 (ANU-P—817) **Yrast traps and high spin states in ^{210}Rn.** Poletti, A.R.; Dracoulis, G.D.; Fahlander, C.; Morrison, I. (Australian National Univ., Canberra. Dept. of Nuclear Physics). Jan 1982. 52p. NTIS (US Sales Only), PC A04/MF A01. Order Number DE83701489.

Yrast and near yrast states have been investigated in ^{210}Rn to high spin ($J > 30$) and high energy (10 MeV). Three different (HI, xn) reactions were used to populate the states of interest and several different γ-ray spectroscopic techniques were utilized. Three high spin yrast traps were discovered. Two de-excite by strong E3 transitions while the third decays mainly via an extremely inhibited E2 transition. The E3 decays are interpreted as allowed single particle transitions between proton or neutron states above the ^{208}Pb shell closure while the inhibited E2 transition is interpreted as indicating a substantial change in structure as the decay proceeds down the yrast line. Interpretation has been given in terms of shell model calculations.

30766 (ANL—83-4, pp 116-124) **Calculation of average capture cross sections for actinides: level-statistical vs global approach.** Froehner, F.H.; Goel, B.; Fischer, U. (Kernforschungszentrum, Karlsruhe, Germany). 1982. NTIS, PC A99/MF A01.

From NEANDC/NEACRP specialists meeting on fast-neutron capture cross sections; Argonne, IL, USA (20 Apr 1982).

Average neutron capture cross sections have been calculated in the unresolved resonance region for many actinides, with two different methods: (1) with energy-dependent neutron strength functions obtained from a spherical optical potential adjusted to ^{238}U data, radiation strengths from the giant dipole resonance model with global parameters, and width fluctuation corrections according to Tepel et al.; (2) with constant neutron strength functions and energy-dependent radiation strengths, both from resolved resonances, and width fluctuation corrections according to Moldauer (1980). Results from the two methods are compared with each other and with experimental data.

30767 (ANL—83-4, pp 125-132) **Use of ABAREX for neutron capture calculations.** Moldauer, P.A. (Argonne National Lab., IL). 1982. NTIS, PC A99/MF A01.

From NEANDC/NEACRP specialists meeting on fast-neutron capture cross sections; Argonne, IL, USA (20 Apr 1982).

ABAREX is an optical-statistical model program for the calculation of energy averaged neutron induced nuclear reaction cross sections. The program uses the optical model algorithm of ABACUS and the statistical model method of NEARREX with many improvements and modifications. The input and output are designed to be convenient for the user and the program utilizes dynamic storage allocation with avoids fixed limits on the sizes of the various arrays. The program requires 250K storage in the IBM 370 system in its present configuration. Additional storage can easily be made available. For optical model parameter fitting, the program uses the subroutine LMDIF1 of the MINPACK-1 package of subroutines for the solution of nonlinear least square problems. No detailed description of the program will be attempted here. The capabilities and uses of the program will be outlined with special reference to neutron capture cross sections.

30768 (ANL—83-4, pp 288-301) **Fast-neutron capture in ^{238}U and ^{232}Th.** Poenitz, W.P. (Argonne National Lab., IL). 1982. NTIS, PC A99/MF A01.

From NEANDC/NEACRP specialists meeting on fast-neutron capture cross sections; Argonne, IL, USA (20 Apr 1982).

Experimental detection techniques employed in the measurements of the ^{238}U(n,γ) and ^{232}Th(n,γ) cross sections are discussed. The experimental data base is considered and it is concluded that these cross sections are presently known with 5+- in the energy range of greatest importance for LMFBR applications. New measurements will have an insignificant impact on the ^{238}U(n,γ) cross sections if they do not achieve an uncertainty of $\simeq$ 2% or less.

30769 (ANL—83-4, pp 302-313) **Absolute measurement of the cross section for 23-keV neutron activation of thorium.** Baldwin, G.T.; Knoll, G.F. (Univ. of Michigan, Ann Arbor). 1982. NTIS, PC A99/MF A01.

From NEANDC/NEACRP specialists meeting on fast-neutron capture cross sections; Argonne, IL, USA (20 Apr 1982).

Absolute measurement of the thorium radiative capture cross section has been made using antimony-beryllium photoneutrons and an activation method. The average of two determinations is 606 mb near 23 keV neutron energy with a 3.2% estimated error from all sources. This value is about 10% higher than those reported from recent measurements employing iron-filtered neutron beams.

30770 (ANL—83-4, pp 314-335) **Status of neutron capture data of ^{233}U, ^{235}U and ^{239}Pu in the unresolved resonance region.** Corvi, F. (CEC-JRC, Geel, Belgium). 1982. NTIS, PC A99/MF A01.

From NEANDC/NEACRP specialists meeting on fast-neutron capture cross sections; Argonne, IL, USA (20 Apr 1982).

First, the outstanding requests for $\alpha\gamma$ and α data of the three main fissile nuclei are briefly summarized. Then the methods employed in the last twenty years of differential α-measurements are critically discussed. They can be classified into three groups: (a) systems measuring simultaneously absorption radiation and fissions with two separate detectors; (b) systems in which a large fraction of fission and capture γ-rays are identified by means of prompt or delayed coincidences with a high efficiency fission detecting apparatus; (c) systems consisting of a γ-ray detector only, in which capture and fissions are distinguished by some special feature of the radiation emitted. Advantages and drawbacks of the various techniques are discussed, particularly in connection with all sources of systematic errors. Measurements of alpha in the unresolved resonance region are separately reviewed for each of the three fissile isotopes.

30771 (ANL—83-4, pp 336-346) **Fast neutron capture in actinide isotopes: recent results from Karlsruhe.** Wisshak, K.; Kaeppeler, F.; Reffo, G.; Fabbri, F. (Kernforschungszentrum, Karlsruhe, Germany). 1982. NTIS, PC A99/MF A01.

From NEANDC/NEACRP specialists meeting on fast-neutron capture cross sections; Argonne, IL, USA (20 Apr 1982).

Capture gamma-ray spectra of ^{241}Am, ^{240}Pu, ^{242}Pu ^{235}U and ^{197}Au were calculated in the framework of the spherical optical model and the statistical model. These spectra were used to correct experimental data for the capture cross sections of ^{240} ^{242}Pu and ^{241}Am from relative measurements using a Moxon Rae-detector with graphite converter and ^{197}Au as well as ^{235}U as standards. This correction is required to take into account that the detector efficiency is not exactly proportional to gamma-ray energy. The resulting correction factors proved to be negligible for measurements relative to ^{235}U, whereas they are $\sim$ 3% if gold is used as a standard. The capture cross section of ^{243}Am has been measured in the energy range 10 to 250 keV using kinematically collimated neutrons from the ^{7}Li(p,n) and T(p,n) reaction. The samples are positioned at flight paths of 5 to 7 cm and gold was used as a standard. Capture events were detected by two Moxon-Rae detectors with graphite and bismuth-graphite converters shielded by 0.5 to 2 cm of lead. Fission events were detected by a NE213 liquid scintillator. The present status of the experiment and some preliminary results will be presented.

30772 (ANL—83-4, pp 347-354) **Measurement of neutron capture cross section and alpha of ^{235}U from 2 to 85 keV.** Corvi, F.; Calabretta, L.; Merla, M.; van der Veen, T.; Moore, M.S. (CEC-JRC, Geel, Belgium). 1982. NTIS, PC A99/MF A01.

From NEANDC/NEACRP specialists meeting on fast-neutron capture cross sections; Argonne, IL, USA (20 Apr 1982).

The measurement was performed at the Geel linac, using a multi-plate fission chamber of known efficiency and four C_6F_6 scintillators. Two different normalizations, one based on the Au(n,γ) cross section in the keV region and the other on the thermal α value were compared and found to agree within 3%.

30773 (ANL—83-4, pp 379-393) **Some aspects of the evaluation of ^{237}Np, ^{238}Pu and ^{241}Am capture cross-sections in the unresolved region.** Derrien, H. (CEN, Cadarache, France). 1982. NTIS, PC A99/MF A01.

From NEANDC/NEACRP specialists meeting on fast-neutron capture cross sections; Argonne, IL, USA (20 Apr 1982).

The ^{237}Np, ^{238}Pu and ^{241}Am neutron cross-sections have been evaluated in the energy range from 10^{-5} eV to 14 MeV. Optical model and statistical model codes have been used to calculate the cross-sections in the unresolved region and at higher energy. The input parameters have been adjusted to reproduce the experimental data available in these energy ranges and particularly the capture cross-sections. The S_0 and S_1 strength functions obtained from resonance parameter analysis or from experimental capture cross-sections in the unresolved region have been compared to those deduced from the optical model calculations. In this paper, we present the different aspects of the evaluation related to the use of the experimental capture data as a basis in the determination of the statistical and optical model parameters.

30774 (ANL—83-4, pp 557-563) **Fast-neutron capture in fissile and fertile nuclides.** Peelle, R.W. (Oak Ridge National Lab., TN). 1982. NTIS, PC A99/MF A01.

From NEANDC/NEACRP specialists meeting on fast-neutron capture cross sections; Argonne, IL, USA (20 Apr 1982).

Extensive graphical and numerical presentations, available to the working group, assisted us in exploring the rich data base established through the labors of many skilled persons. Consistent with the meeting setting, the working group discussion concentrated on data for fast-breeder reactor (FBR) applications. All but 1 to 3% of the magnitude of cross section sensitivities of FBR parameters come from the energy region below $\approx$ 1.5 MeV, so the statistical model is the relevant theoretical concept. The Meeting emphasizes energies above $\approx$ 10 keV where resonance fluctuations are not a dominant factor. However, we should remember that approximately half the FBR sensitivity to ^{238}U capture data, as relfected in integral parameters, lies below 25 keV where resonance fluctuations are strong and resonance self-protection is a most important consideration in reactor physics. There are similar low-energy aspects to ^{239}Pu capture in that $\approx$ 30% of the FBR-parameter data sensitivity lies below $\approx$ 4 keV. Even with the discussion largely cofined to the $\approx$ 10 to 1500 keV region, the working group could only scratch the surface of the available body of information. The reader is referred to the papers presented at the Meeting and to the references contained therein in order to obtain a more detailed understanding of current issues related to fissile and fertile fast-neutron capture.

30775 (DOE/ER/02176—47) **Neutron spectroscopy. Final report.** Havens, W.W. Jr.; Melkonian, E.; Felvinci, J. (Columbia Univ., New York (USA). Dept. of Applied Physics and Nuclear Engineering). 1977. 26p. (COO—2176-47). NTIS, PC A03/MF A01. Order Number DE83010113.

Portions are illegible in microfiche products.

The researches carried by the Columbia University Department of Applied Physics and Nuclear Engineering, and its predecessors, in contract initially with the AEC, then with ERDA, and finally with DOE, had as its initial objective the measurement of fission cross sections and energy distributions of the fission fragments, as measured by pulse heights in detectors. These investigations sought to establish relations between the energy distributions and the quantum numbers of the resonances. In addition, some related, together with some unrelated, investigations were conducted. Progress is reported on measurements on the fissile isotopes, capture cross section measurements, theoretical developments, and the NEVIS synchrocyclotron pulsed neutron source. (WHK)

30776 (UCRL—88414) **Rapid disappearance of shell effects in the fission of transfermium nuclei.** Hulet, E.K. (Lawrence Livermore National Lab., CA (USA)). 1983. Contract W-7405-ENG-48. 13p. (CONF-830444—1). NTIS, PC A02/MF A01. Order Number DE83010366.

From International school-seminar on heavy ion physics; Alushta, USSR (14 Apr 1983).

Portions are illegible in microfiche products.

In the last fifteen years we have learned that nuclear shells have a very broad and pervasive impact on the fission process. In the first few decades after the discovery of nuclear fission, the nucleus was treated as a drop of liquid with smoothly varying attractive and repulsive forces. Although this model still forms the underlying basis for fission, we also observe large effects from the superimposition of shell corrections derived from coupling the quantum states of individual nucleons. The consequences of single-particle coupling on the fission process can be striking and may often overshadow that originating from the intrinsic liquid-drop component. Here, we point out several major features attributable to shell effects in the spontaneous fission (SF) of the lighter actinides, the sudden transition to symmetric fission in the fermium isotopes, and finally new experimental information indicating another transition in the SF of transfermium nuclides due to the disappearance of shell perturbations. In each transition, the abruptness is surprising, and for the moment, such rapid changes in fission behavior lack a theoretical rationale.

30777 (CEA-N—2227) **SCAT2: a spherical optical model code.** Bersillon, O. (CEA Centre d'Etudes de Bruyeres-le-Chatel, 92 - Montrouge (France)). Oct 1981. 74p. (In French). NTIS (US Sales Only), PC A04/MF A01. Order Number DE83701488.

This note describes, after a short summary of the relevant theoretical formulae, the spherical optical model code SCAT2. This code is highly modular and employs recent numerical methods, in particular for the Coulomb functions calculations. The amount of input data is kept minimal in order to make use of the program extremely simple. The listing and some test cases are given in the appendix. The code is being extensively used in the field of nuclear evaluation.

30778 (CONF-830340—1) **Nucleus-nucleus potentials.** Satchler, G.R. (Oak Ridge National Lab., TN (USA)). 1983. Contract W-7405-ENG-26. 19p. NTIS, PC A02/MF A01. Order Number DE83009799.

From International conference on heavy-ion physics and nuclear physics; Catania, Italy (21 Mar 1983).

The significance of a nucleus-nucleus potential is discussed. Information about such potentials obtained from scattering experiments is reviewed, including recent examples of so-called rainbow scattering that probe the potential at smaller distances. The evidence for interactions involving the nuclear spins is summarized, and their possible origin in couplings to non-elastic channels. Various models of the potentials are discussed.

30779 (JINR—R-2-81-780) **Problems of the theory of light nucleus inelastic interactions.** Uzhinskij, V.V. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Computing Techniques and Automation). 1981. 8p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE83701538.

By example of $\alpha\alpha$ reactions the problems of the theory of light nucleus inelastic interactions are discussed. It is shown that the generalization of eikonal approach to inelastic nucleus reactions permits to reproduce the main characteristics of secondary particles over rapidity Rsub(y) distributions in the ^{4}He interactions at high energy. For these interactions the cross sections of collisions with defined multiplicity of inelastic interactions and the cross sections

of some processes are given. The Rsub(y) value is calculated in rough approximation and conclusion is drawn that the measurements of proton spectra are very necessary for an extention of theory. The relation of average multiplicity of particles produced in $\alpha\alpha$ interactions to the average multiplicity of particles in NN-collisions cannot exceed 2. The Rsub(y) value in the central region also cannot be more than 2. In most cases of inelastic ^{4}He nucleus interactions the processes analogous to those in hadron- nucleus collisions occur.

30780 **(JINR—R-7-81-767) Kinematics of products of two complex nuclei tangential interaction.** Tarantin, N.I. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Reactions). 1981. 16p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE83701519.

Methods of classical mechanics are used to consider the kinematics of products of two complex nucleus tangential interaction with and without the transfer of nucleons from one nucleus to another. All possible cases of nuclear surface conjunction and interaction are analysed including both the known (rolling, stricking) and not yet considered (sliding with a blocked rotation of one nucleus, conservative tangential interaction, a plain collision with nucleon transfer and others). A total set of formulas is derived for determining spins, the energy of orbital motion and of self-rotation of products of nucleon transfer binary reaction which are convenient for calculations.

30781 **(MPA—43) Average radiation widths and the giant dipole resonance width.** Arnould, M.; Thielemann, F.K. (Max-Planck-Institut fuer Physik und Astrophysik, Garching (Germany, F.R.). Inst. fuer Astrophysik). Nov 1982. 4p. Available from Max-Planck-Institut fuer Physik und Astrophysik, Garching (Germany, F.R.).

From International conference on nuclear data for science and technology; Antwerp (Belgium) (6 - 10 Sep 1982).

The average E1 radiation width can be calculated in terms of the energy Esub(G) and width GAMMAsub(G) of the Giant Dipole Resonance (GDR). While various models can predict Esub(G) quite reliably, the theoretical situation regarding Λsub(G) is much less satisfactory. We propose a simple phenomenological model which is able to provide GAMMAsub(G) values in good agreement with experimental data for spherical or deformed intermediate and heavy nuclei. In particular, this model can account for shell effects in GAMMAsub(G), and can be used in conjunction with the droplet model. The GAMMAsub(G) values derived in such a way are used to compute average E1 radiation widths which are quite close to the experimental values. The method proposed for the calculation of GAMMAsub(G) also appears to be well suited when the GDR characteristics of extended sets of nuclei are required, as is namely the case in nuclear astrophysics.

30782 **Classifying the singularity in the deformation shape of the liquid-drop model.** Alesso, H.P.; Smith, C.F. (California Univ., Livermore (USA). Lawrence Livermore Lab.). *Nuovo Cimento [Sezione] A;* **66**: No. 3, 272-282(1 Dec 1981).

Microfiche only, copy does not permit paper copy reproduction2 refs.

The deformation shape of the liquid-drop model of nuclear fission can be excellently represented by the Legendre-polynomial expansion method. Unfortunately, in the past, it has appeared necessary to include a large number of higher-order terms in order to describe the more deformed shapes encountered in the later stages of fission. In this paper, the degenerate singularity that occurs in the Businaro-Gallone-Swiatecki representation of the Legendre-polynomial expansion of the deformation shape for the slightly distorted ground state is classified. In the present analysis the singularity has been found to be double-degenerate and strongly 3-determinate. As a result, it has been classified as a hyperbolic-umbilic elementary catastrophe. In order to make the potential function of the singularity a universal unfolding, two new control parameters for the liquid-drop model are introduced.

30783 **Nuclear states and shapes at high spin.** Diamond, R.M. (California Univ., Berkeley (USA). Lawrence Berkeley Lab.). *Nukleonika;* **26**: No. 3, 337-372(1981).

As angular momentum is added to a nucleus, the balance of forces acting upon it to determine its shape, moment of inertia, mode of rotation, and type of level structure may undergo a series of changes. At relatively low spins a deformed nucleus will rotate collectively, and one may see the effect of Coriolis anti-pairing in gradually increasing the moment of inertia. Around spin 12-16 ($h/2\pi$) there may be an abrupt change (backbending) when a pair of high-j nucleus unpair and align with the axis of rotation, thus allowing the nucleus to slow its collective rotation. This process, the start of a sharing of angular momentum between single-particle motion and the collective rotation, gives a lower total energy and corresponds to a change towards triaxiality in the shape of the nucleus. At much higher spins we can no longer observe discrete γ-ray transitions, but are in the regime of continuum spectra; all the information on these high-spin states (to 65 ($h/2\pi$)) is contained in these continuum cascades. We are beginning to learn how to study these spectra, experimentally and theoretically, and new techniques offer promise of letting us extract a great deal of information about the shapes and properties of very high spin states.

30784 **Spin and isospin fluctuations in heavy ion collisions and their dependence upon the shape of the dinuclear complex.** Moretto, L.G. (California Univ., Berkeley (USA). Lawrence Berkeley Lab.). *Nukleonika;* **26**: No. 3, 425-470(1981).

From 13. Summer school in nuclear physics; Mikolajki (Poland) (1 - 13 Sep 1980).

Paper copy only, copy does not permit microfiche production3 refs.

The relevance of higher multipoles of giant isovector modes in the charge distribution of deep inelastic fragments is discussed and found to depend strongly on mass asymmetry. The sources of angular momentum fluctuations are investigated. Quantal effects are considered as well as effects arising from non-equilibrium and equilibrium statistical fluctuations. A model based upon equilibrium statistical mechanics is considered in detail and used to predict both 2nd moments of the angular momentum distributions and the angular momentum misalignment. Analytical expressions are derived to calculate the angular distributions of sequentially emitted particles, fission fragments, as well as gamma rays in terms of the angular momentum misalignment. Recent data on the angular distributions of sequential alphas, fission and gamma rays are analyzed in terms of the model.

30785 (ANL—82-80, pp 181-189) **Dynamic range aspects of pulsed source instruments.** Mezei, F. (Institut Laue-Langevin, Grenoble, France). Jan 1983. NTIS, PC A99/MF A01.

From 6. annual international collaboration of advanced neutron sources meeting; Argonne, IL, USA (28 Jun 1982).

In recent applications of neutron scattering the dynamic range is found to be an important aspect of instrument performance along with neutron flux and resolution. It is pointed out that due to the inherent use of a broad wavelength band, certain instruments, like small angle scattering and neutron spin echo spectrometers, provide better dynamic range capability on a pulsed source than on a continuous source.

30786 (ANL—82-80, pp 279-289) **Crystal analyzer TOF spectrometer (CAT) for high energy incoherent neutron scattering.** Watanabe, N. (National Lab. for High Energy Physics, Oho, Ibaraki, Japan); Ikeda, S.; Kai, K. Jan 1983. NTIS, PC A99/MF A01.

From 6. annual international collaboration of advanced neutron sources meeting; Argonne, IL, USA (28 Jun 1982).

This paper reports the design and performance of a high resolution crystal analyzer spectrometer which has been built and operated at KENS. Energy resolution of the instrument is $\Delta\epsilon/\epsilon = 0.02 \sim 0.03$ in the range of energy transfer $\epsilon = 0.5 \sim 1$ eV. With

this spectrometer, the local mode of hydrogen in various metallic hydrides have been measured. In the case of TiH_2 or ZrH/sub x/, higher harmonics of the optical peaks have been detected up to 5th orders, with their fine structures. Higher order peaks of $TaH_{0.5}$ have also been detected. The optical mode in hydrogenated metallic glass of $NiTiH_{0.5}$ has been measured and compared with that in crystalline sample.

30787 (ANL—82-80, pp 503-528) **Computational methods for high-energy source shielding.** Armstrong, T.W.; Cloth, P.; Filges, D. (Kernforschungsanlage Juelich GmbH, Germany). Jan 1983. NTIS, PC A99/MF A01.

From 6. annual international collaboration of advanced neutron sources meeting; Argonne, IL, USA (28 Jun 1982).

The computational methods for high-energy radiation transport related to shielding of the SNQ-spallation source are outlined. The basic approach is to couple radiation-transport computer codes which use Monte Carlo methods and discrete ordinates methods. A code system is suggested that incorporates state-of-the-art radiation-transport techniques. The stepwise verification of that system is briefly summarized. The complexity of the resulting code system suggests a more straightforward code specially tailored for thick shield calculations. A short guide line to future development of such a Monte Carlo code is given.

30788 (CONF-820998—4) **Inelastic cross sections for electron interactions in liquid water.** Hamm, R.N.; Ritchie, R.H.; Turner, J.E.; Wright, H.A. (Oak Ridge National Lab., TN (USA)). 1982. Contract W-7405-ENG-26. 5p. NTIS, PC A02/MF A01. Order Number DE83009773.

From Workshop on the interface between radiation physics and radiation chemistry; Argonne, IL, USA (9 Sep 1982).

Portions are illegible in microfiche products.

The task was to develop a set of cross sections for electron inelastic processes in liquid water suitable for use in a Monte Carlo transport calculation. Results are plotted as inverse mean free paths vs electron energy. (DLC)

30789 (CONF-8105215—1) **Factorization methods in linear-transport theory.** Kaper, H.G. (Argonne National Lab., IL (USA)). 1981. Contract W-31-109-ENG-38. 21p. NTIS, PC A02/MF A01. Order Number DE83010598.

From Toeplitz memorial conference; Tel-Aviv, Israel (11 May 1981).

Time-independence linear-transport problems in plane-slab configurations are described abstractly by differential equations of mixed forward-backward type. The solution of boundary value problems requires the introduction of extension operators, whose existence reflects the factorization property of the symbol of the transport equation. In this article we use the simplest model transport equation to illustrate the structure of these problems. We also indicate various generalizations that have been investigated in the context of linear-transport theory.

30790 (FEI—1038) **A2F computer code for data preparation to carry out group calculations by the Monte Carlo method on the basis of the ARAMAKO-2F system.** Korobejnikov, V.V. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Obninsk. Fiziko-Ehnergeticheskij Inst.). 1981. 11p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700419.

The A2F computer code for preparation of constants for reactor multigroup calculations by the Monte Carlo method in 26-group approximation on the basis of the ARAMAKO-2F system is described. The A2F computer code scheme and the instruction on data preparation are given. Initial data consist of three sections: initial data to the constant preparation computer code, initial data to the MMK22 subcode, initial data to the geometric module.

30791 **Calculation of the diffusion constant of muons in metals at low temperatures.** Jaeckle, J. (Konstanz Univ., Germany); Kehr, K.W. *Muon SR Newsletter;* No. 28, 1386-1399(24 Dec 1982).

The diffusion constant of muons in metals at low temperatures is derived from the muon Boltzmann equation under the assumption that electron-muon scattering dominates, and a T^{-1} behaviour is obtained. This temperature dependence compares favourably with the experimentally determined diffusion constant prop. $T^{-0.6}$ for positive muons in aluminum. But the calculated absolute value of the diffusion constant around 1K is still in severe disagreement with experiment.

30792 **Muonium in ultra-pure germanium.** Doering, K.P. (Stuttgart Univ., Germany); Haas, N.; Haller, E.E.; Herlach, D. *Muon SR Newsletter;* No. 28, 1400-1406(24 Dec 1982).

The spin precession signals of positive muons (μ^+) implanted into Ge single crystals of ultra-high purity (electronically active impurity concentration $\leqq 3.10^{11}$ cm^{-3}) containing between 10^{13} cm^{-3} and 10^{17} cm^{-3} Si have been investigated at temperatures ranging from 5 K to 280°K in magnetic fields of 0.3 mT to 27.5 mT applied perpendicular to the μ^+ polarization. As in previous work, the spin precession of muons in diamagnetic environments [μ^+] and of normal (isotropic) muonium [Mu = μ^+e^-)] as well as of anomalous (anisotropic) muonium [Mu] were observed. The damping of the Mu signal increases drastically with increasing Si content. This indicates that the muonium diffuses rather rapidly through the Ge matrix and interacts with solute Si atoms.

30793 **Extracting maximal information on positive muon diffusion in metals.** Leon, M. (Los Alamos National Laboratory, NM). *Muon SR Newsletter;* No. 27, 1250-1254(1 Jul 1982).

A discussion is given on how combining zero- and longitudinal-field μSR can give more information on the motion of the μ^+ in the target than zero-field studies alone.

30794 **Theory of muon spin relaxation due to the hopping motion of positive muons in ferromagnets.** Seeger, A. (Max-Planck-Inst. fuer Metallforschung, Stuttgart, Germany); Monachesi, P. (Los Alamos National Laboratory, NM). *Muon SR Newsletter;* No. 27, 1270-1320(1 Jul 1982).

The interaction of the magnetic moments of spin-polarized positive muons with the magnetic fields at the interstices in ferromagnetic (or ferrimagnetic) materials may be used to study the localization and the hopping motion of thermalized muons by observing the relaxation of the longitudinal or transverse spin polarization or the shift of the muon spin precession frequency as a function of the orientation of a strong applied magnetic field. The general theory is developed and applied to the special cases of muon diffusion between two types of interstices of tetragonal symmetry in body-centered cubic metals (α-Fe) or of cubic symmetry in face-centered cubic metals (Ni). It is shown that by a suitable choice of the strength and the crystallographic direction of the applied magnetic field quite detailed information on the quantum diffusion of positively charged light particles in crystals may be obtained.

30795 **Diffusion and trapping of positive muons in niobium.** Boekema, C. (Los Alamos National Lab., NM); Heffner, R.H.; Hutson, R.L.; Leon, M.; Schillaci, M.E.; Kossler, W.J.; Numan, M.; Dodds, S.A. *Muon SR Newsletter;* No. 27, 1321-1342(1 Jul 1982).

Using zero- and longitudinal-field μSR, the conventional interpretation of the double-humped behavior of the μ^+-depolarization rate in Nb has been established unambiguously. Thus the μ^+ mobility is shown to increase monotonically with temperature. The widths of the magnetic field distributions (due to the Nb nuclear moments) and the rates for finding or escaping from traps have been measured at several temperatures. In addition, equations are presented which govern the time-evolution of the μ^+ polarization, when the muons are finding traps, escaping from traps, or both, for zero, longitudinal, and transverse external magnetic fields. A method for including the effect of more than one kind of trap acting at a particular temperature is given.

30796 **Low-temperature mobility of positive muons in pure copper.** Seeger, A. (Max-Planck-Institut fuer Metallforschung, Stuttgart, Germany). *Muon SR Newsletter;* No. 27, 1356-1366(1 Jul 1982).

For the recently discovered mobility of positive muons in pure copper at liquid-helium temperatures a model based on transitions from metastable to stable interstitial sites is proposed and

shown to be in good agreement with the observations. Several additional experimental tests of this interpretation are suggested.

30797 **Diffraction crystals for sagittally focusing x-rays.** Ice, G.E.; Sparks, C.J. Jr. US Patent Application 6-385,993. 7 Jun 1982. 21p. Contract W-7405-ENG-26.

The invention is a new type of diffraction crystal designed for sagittally focusing photons of various energies. The invention is based on the discovery that such focusing is not obtainable with conventional crystals because of distortion resulting from anticlastic curvature. The new crystal comprises a monocrystalline base having a front face contoured for sagittally focusing photons and a back face provided with rigid, upstanding, stiffening ribs restricting anticlastic curvature. When mounted in a suitable bending device, the reflecting face of the crystal can be adjusted to focus photons having any one of a range of energies.

30798 **On the advantages of invariant imbedding for the calculation of deep-penetration problems.** Hughes, H.G.; Faber, V.; White, A.B. Jr.; Wing, G.M. (Los Alamos National Laboratory, P.O. Box 1663, Los Alamos, NM 87545). *Transactions of the American Nuclear Society;* **41**: 486-487(Jun 1982). (CONF-820609—).

From American Nuclear Society annual meeting; Los Angeles, CA, USA (6 Jun 1982).

30799 **Advances in discrete-ordinates electron transport.** Morel, J.E.; Wienke, B.R. (Los Alamos National Laboratory, P.O. Box 1663, Los Alamos, NM 87545). *Transactions of the American Nuclear Society;* **41**: 475-476(Jun 1982). (CONF-820609—).

From American Nuclear Society annual meeting; Los Angeles, CA, USA (6 Jun 1982).

30800 **Energy spectra of heavy fragments from the interaction of protons with communications materials.** Hamm, R.N.: Rustgi, M.L.; Wright, H.A.; Turner, J.E. (Oak Ridge National Lab., TN). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **NS-28**: No. 6, 4004-4006(Dec 1981). Contract W-7405-ENG-26.

A Monte Carlo computer code is used to calculate the energy spectra of recoil nuclei resulting from interactions of protons with communications materials. Results are presented for 130 MeV and 1 GeV protons incident on O, Si, Ga, As, and Au. The results for 130 MeV protons on Si are compared with previous calculations and measurements.

30801 **Straggling and plasmon excitation in the energy loss spectra of electrons transmitted through carbon.** Ashley, J.C. (Oak Ridge National Lab., TN); Cowan, J.J.; Ritchie, R.H.; Anderson, V.E.; Hoelzl, J. *Thin Solid Films;* **60**: 361-370(1979). Contract W-7405-ENG-26.

A model is described for the calculation of differential inverse mean free paths (DIMFPs) for the inelastic interactions of electrons with solids. The energy loss function $\mathrm{Im}[-1/\epsilon(q,\omega)]$ is represented as a sum of Drude-type functions. The adjustable parameters in the energy loss function are fixed by a fit to the energy loss function in the optical limit ($q \rightarrow 0$) obtained from data on the optical constants of glassy carbon. The extension of the optical energy loss function to arbitrary values of q in this model leads to an analytical expression for the DIMFP. Energy loss spectra for low energy electrons (less than 2000 eV) transmitted through carbon foils of various thicknesses are determined by solving the transport equation using a convolution method and the DIMFPs determined as described above. Comparisons of these calculated spectra with those measured by Jacobi show that the model provides a good description of both the broad straggling distribution and the fine structure due to plasmon excitation.

30802 **(AECL—7409) Progress report, Health Sciences Division, 1 April - 30 June, 1981.** (Atomic Energy of Canada Ltd., Chalk River, Ontario. Chalk River Nuclear Labs.). Sep 1981. 113p. (PR-HS—8). NTIS (US Sales Only), PC A06/MF A01. Order Number DE83700427.

Calculations of absorbed doses and dose equivalents at various depths in a cylindrical tissue equivalent phantom by monoenergetic neutrons and calculations of quality factors for monoenergetic neutrons in tissue have been extended to neutron energies up to 14.7 MeV. Irradiations of human lymphocytes with low doses of ^{60}Co gamma rays and 14.6 MeV neutrons show a lower initial incidence of DNA strand breaks produced by neutrons than by gamma radiation. Tests are in progress on the relative thermal neutron sensitivities of various commonly used types of TLD phosphor. Studies on soil columns contaminated with radioactive cesium have demonstrated the release of a small portion of the cesium present on the column on filterable particles. Work on the bioavailability of ^{60}Co present in groundwater has indicated that complexed ^{60}Co is less available to plants than added free cobalt. A liquid scintillation method has been successfully used to measure radon-222 in bedrock groundwater. Radiation Biology research activities have been concerned mainly with effects of radiation and tumor promoters on the DNA in blood lymphocytes, a new method of preparing plasmid DNA, relation of oxygen and various free radicals to radiation-induced lethality and genetic changes in yeast, the functions of different DNA repair systems in yeast, induction of DNA damage by ultraviolet light, relationship of radiation sensitivity to hereditary deficiencies in DNA repair systems in cultured human cells, relative biological effectiveness of tritium beta-radiation for induction of breast cancer in rats and the follow-up of past CRNL employees. Metabolic studies were also conducted.

30803 **(AECL—7513) Progress report, Health Sciences Division, 1 July - 30 September, 1981.** (Atomic Energy of Canada Ltd., Chalk River, Ontario. Chalk River Nuclear Labs.). Dec 1981. 104p. (PR-HS—9). NTIS (US Sales Only), PC A06/MF A01. Order Number DE83700429.

Monte Carlo calculations of the dose index and dose-equivalent index for fields of monoenergetic neutrons from thermal energies to 14.7 MeV are in progress. The evaluation of MgB_4O_7:Dy as thermoluminescent dosimeters is continuing. Some factors that limit the accuracy of TLD readings have been investigated. Prototypes of a new portable personal tritium monitor have been evaluated at various nuclear power stations and at CRNL. Various methods of correcting Geiger counter rates for large dead-time losses are under investigation. An area has been selected as the site for a large-scale tracer injection test where groundwater flow behaviour in an area of predominantly vertical movement will be studied and modelled. The project 'Bedrock-groundwater/Lake-connection' is underway. A new method for counting carbon-14 at low levels has been tested. The release of approximately 130 TBq (3500 curies) of tritiated water from the NPD site over a 7-day period in August has provided an opportunity to study dispersion in the Ottawa River. Work in the Radiation Biology Branch has dealt with both the nature of DNA damage by radiation and the response of cells as they attempt to repair this injury.

30804 **(AERE-R—10385) SABRE: a computer-based system for the assessment of body radioactivity by photon spectrometry. Part 4.** Venn, J.B. (UKAEA Atomic Energy Research Establishment, Harwell. Environmental and Medical Sciences Div.). Feb 1982. 58p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83701542.

A PDP-11/10 computer system is described for the acquisition and processing of pulse height spectra from detectors used for the measurement of body radioactivity. Version 4 of SABRE (System for the Assessment of Body Radioactivity) provides control of multiple detection systems from visual display consoles by means of a command language. A wide range of facilities is available for the display, processing and storage of acquired spectra and complex operations may be pre-programmed by means of the SABRE MACRO language. The hardware includes a CAMAC interface to the detection systems, disc cartridge drives for mass storage of data and programs, and data-links to other computers. The software is written in assembler language and includes special features for the dynamic allocation of computer memory and for safeguarding acquired data.

30805 (ANL—82-80, pp 605-617) **Methods of neutron and proton dosimetry at spallation sources.** Greenwood, L.R.; Popek, R.J. (Argonne National Lab., IL). Jan 1983. NTIS, PC A99/MF A01.

From 6. annual international collaboration of advanced neutron sources meeting; Argonne, IL, USA (28 Jun 1982).

A variety of techniques are being developed to measure the neutron and proton fluxes and energy spectra at spallation neutron sources. Multiple-activation dosimetry is being used to adjust the neutron energy spectrum by a least-squares procedure. Primary beam protons are measured by the $^{27}Al(p,*)\ ^{22}Na$ reaction and secondary protons by (p,n) reactions on ^{7}Li, ^{51}V, and ^{65}Cu. Lithium fluoride thermoluminescent dosimeters are used to measure the neutron dose rate, although we have been unable to determine the much weaker gamma dose rate. Neutron fluxes, displacement damage, gas production and transmutation, and dose rates are now routinely determined for materials irradiations with uncertainties of 10 to 15%.

30806 (JINR—R-16-81-607) **Determination of maximum neutron dose equivalent in the 10^{-8}-25 MeV energy range using thermal neutron detector with two moderators.** Alejnikov, V.E.; Bamblevskij, V.P.; Be En Gvan. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1981. 7p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE83701493.

Method for measuring neutron dose equvalent in the energy range of less than 25 MeV is described. Moderated thermal neutron detector with two polyethylene moderator spheres 5 and 10 inches in diameter is used. Systematic error is estimated to be less than 30% in the radiation fields behind the shielding of accelerators upto 10 GeV particle energy and of nuclear reactors.

REFER ALSO TO CITATION(S) 30727, 30728

30807 (AECL—7416) **Progress report, Chemistry and Materials Division, 1 April - 30 June, 1981.** (Atomic Energy of Canada Ltd., Chalk River, Ontario. Chalk River Nuclear Labs.). Aug 1981. 93p. (PR-CMa—57). NTIS (US Sales Only), PC A05/MF A01. Order Number DE83700428.

The work of the Division in the areas of solid state science, radiation, physical and analytical chemistry, and materials science during the quarter is described. Measurements of ion stopping power have emphasized the importance of axial symmetry and may be used to show the contribution of nuclear inelastic events to stopping processes. Enhancement of ion scattering at 180 degrees can occur even in the first few layers of a single crystal of gold implanted with heavy atoms. Agreement has been obtained between experimental and calculated rates for dechanneling of protons in gold. The rate of decomposition of HOI in aqueous solutions has been determined. The effects of radiation on dithiothreitol is being studied. Laser photochemistry work includes investigations of multiphoton dissociation and of laser-induced zirconium isotope separation. A method has been found for the preparation of oxygen gas samples for the determination of oxygen isotope ratios in water, and high-performance liquid chromatography has been applied to metals in ground water. Sputtered coatings of stainless steel on the surface of zircaloy fuel cladding reduce the oxidation rate in steam. A theoretically-based design equation for irradiation growth of pressure tubes has been developed. Studies on the effect of small strains on zircaloy-2 tubing show the need to avoid even small amounts of compressive deformation of calandria tubes.

30808 (JINR—5-82-67) **Existence of positive solutions in the Lindner-Fedyanin model.** Zhidkov, P.E. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Computing Techniques and Automation). 1982. 10p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700185.

The 3-dimensional Lindner-Fedyanin model is studied. The variational method applied to one problem is generalized. For the nonlinear elliptical equation which appears at considering solutions of special type sufficient conditions of the existence of nontrivial solution (u, v) of the problem, where $u>0$, $v>0$ are investigated.

30809 (JINR—5-82-68) **Particle-like solutions in some models of nonlinear physics.** Zhidkov, P.E. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Computing Techniques and Automation). 1982. 8p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700186.

The nonlinear common 2-nd order differential equation is studied. The method of qUalitative theory of usual differential equations is used. The sufficient conditions of the existence of partile-like solutions with some zeros are obtained. Their qualitative properties are investigated. The result is applied to two physical models.

30810 (JINR—R-2-81-822) **New exactly solvable systems of differential-difference equations.** Makhaldiani, N.V.; Makhan'kov, V.G. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Computing Techniques and Automation). 1981. 12p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700192.

Two new nonlinear evolution equations are considered. One of them describes a matrix generalization of the Hubbard model, another is the matrix differential-difference analog of nonlinear Schroedinger equation. In the coherent state representation and long wave limit these both lead to a matrix nonlinear Schroedinger equation. For the second equation the Lax representation is constructed, so the integrability via the inverse scattering transform is established. The recent progress in Monte Carlo computation of path integrals arised in quantum field theories and in condensed matter physics related to the generalized Hubbard model is discussed.

30811 **Topological and group theoretical analysis in dynamic nuclear magnetic resonance spectroscopy.** Balasubramanian, K. (Univ. of California, Berkeley). *Journal of Physical Chemistry;* **86**: No. 24, 4668-4674(25 Nov 1982). Contract AC03-76SF00098.

A method is developed for constructing NMR reaction graphs which give the NMR signal and intensity ratio patterns. This is done by generating the irreducible representations spanned by nuclei (whose NMR are of interest) with generating functions obtained from group character cycle indices (GCCI's). The method generates the symmetry species spanned by the nuclei in both the rigid and nonrigid groups without having to know the character of the representation spanned by nuclei. For nonrigid molecules which exhibit internal rotations the GCCI's can be obtained without having to know their character tables. We outline a double-coset technique to obtain the equivalence classes of nuclei and thus to construct NMR reaction graphs. Using this technique one can obtain the NMR signal and intensity ratio patterns. We introduce the concept of restricted character cycle indices (RCCI's) which generate the irreducible representations spanned by a given equivalence class of nuclei. This in turn enables the prediction of coalescence, splitting patterns, and intensity ratios of NMR signals in dynamic processes. Applications to spontaneous generation of chiral signals are outlined, where a nonrigid molecule which possesses no chiral signals suddenly possesses chiral signals (which can be resolved with chiral shift reagents) at lower temperatures.

30812 **Core excitons in Ga-V compound semiconductors.** Hjalmarson, H.P.; Buettner, H.; Dow, J.D. (Univ. of Illinois, Urbana). *Physics Letters [Section] A;* **85**: No. 5, 293-294(5 Oct 1981). Contract AC02-76ER01198.

In this letter we employ the theory of deep impurity levels in semiconductors to compute the core exciton energies of Ga 3d Frenkel core excitons in GaP, GaAs, and GaSb. We determine the electron-hole interaction potential by means of the $Z + 1$ or optical alchemy approximation: the core hole is presumed to have a sufficiently small radius that its charge distribution resembles that of a nuclear proton; the core-excited Ga is transmuted by the excitation into a Ge impurity. The dipole selection rules for excitation by synchrotron radiation require that the final electron orbital be either p-like or f-like; we assume that the p-like (or T_2-symmetric) orbital dominates in these sp^3-bonded semiconductors. Thus we compute the energy of the T_2 orbital of a Ge substitutional defect relative to the lowest conduction band edge.

30813 Spatial dispersion effects in the interaction between metal surfaces. Ashley, J.C. (Oak Ridge National Lab., TN); Ritchie, R.H.; Echenique, P.M. *Solid State Communications;* **40**: 599-601(1981). Contract W-7405-ENG-26.

A simple quantum mechanical description of two interacting metal half-spaces is presented. Plasmon dispersion and single-particle excitation are included in a phenomenological fashion via a plasmon-pole model. The van der Waal's energy calculated for the system is in good agreement with the results obtained by other workers using the random-phase approximation.

30814 Thermodynamic parameters in the earth as determined from seismic profiles. Brown, J.M. (Texas A and M Univ., College Station); Shankland, T.J. *Geophysical Journal of The Royal Astronomical Society;* **66**: 579-596(1981). Contract W-7405-ENG-36.

A Debye model using two cut-off frequencies corresponding to compressional and shear velocities is used to calculate mineral entropies. This model permits entropy and heat capacity in the earth to be calculated from seismic profiles, and iteration yields temperature profiles along an isentrope. With an adiabatic temperature profile it is possible to obtain Grueneisen's parameter and thermal expansion as a function of depth. Only in the lower mantle is the calculated Grueneisen's parameter alone an isentrope approximately proportional to volume. 45 references, 7 figures.

30815 Structure of thermal radiation field in an optically thick limit. Ahluwalia, R.K.; Im, K.H. (Argonne National Lab., IL). *AIAA (American Institute of Aeronautics and Astronautics) Journal;* **20**: 1766-1769(Dec 1982).

The transport of radiation in the optically thick limit is investigated when the temperature profile within the medium is specified and continuous, and when the medium under consideration is not in radiative equilibrium. Results show that the equation governing the transport of incident radiation becomes mathematically singular as the optical thickness becomes large. It is shown that this singularity is an attribute of a small parameter epsilon, which is inversely proportional to the square of the optical thickness, multiplying the highest derivative of the differential equation. It is found that in the optically thick limit, away from the wall the radiation field is near equilibrium, such that up to 0(epsilon) the rates of absorption and emission of radiation are equal. In the near-wall region, however, the absorption and emission rates are different by 0(epsilon to the 1/2). Thus, the magnitude of the divergence of radiative heat flux changes by 0(epsilon to the 1/2) as the wall is approached from the far region, and there exists a radiation boundary layer for the incident radiation in the limit of optical thickness becoming very large.

30816 (IFVE-OTF—82-3) Some classical effects in static spherically symmetric gravitational field in field gravitational theory. Vlasov, A.A. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1982. 14p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700182.

The case of static spherically symmetric source of gravity is under consideration in field gravitational theory (FGT). Expressions for perihelion shift, deflection of light rays and delay of radiosignals are obtained in post-postnewtonian appxoximation. These results are compared with those in GRT. Also the motion of particles is under consideration in strong gravitational field in FGT and new effects are pointed out: the presence of gravitational repulsive forces at short distances, the absence of so called "black holes" and so on. The Einstein theory does not possess these effects, they are inherent only to FGT with minimal coupling.

30817 (ITEP—125(1981)) Loop equations in the theory of gravitation. Makeenko, Yu.M.; Voronov, N.A. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1981. 21p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83701506.

Loop-space variables (matrices of parallel transport) for the theory of gravitation are described. Loop equations, which are equivalent to the Einstein equations, are derived in the classical case. Loop equations are derived for gravity with cosmological constant as well. An analogy with the loop-space approach in Yang-Mills theory is discussed.

30818 (JINR—R-2-81-849) Generalized Hamilton-Jacobi theory for particles with intrinsic angular momentum. Yamaleev, R.M. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Computing Techniques and Automation). 1981. 16p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700193.

Using the procedure of factorization of findamental correlation of classical mechanics expressions for correlation between energy momentum and angular momentum are obtained. The vector analogy of scalar function of action is introduced through which energy momentum and angular momentum are expressed. The second order differential equation for vector function is obtained. It is shown that the obtained equation describes motion of a classical particle with intrinsic angular momentum. In quantum case the considered equation converts to the Pauli equation for particles with spin 1. It is shown that the classical second order differential equation coincides with that of the first degree $h/2\pi$ in the semiclassical approximation of the Pauli equation for spin 1 for $S=S^*$, where S^* is the solution of Hamilton-Jacobi equation. The analogous investigation is performed for relativistic case, where the correspondence of classical equations for particles with intrinsic angular momentum and the Proca equation for spin 1 is established.

30819 (JINR—R-11-81-856) Solution of high order of accuracy of the Sturm-Liouville partial problem for a system of differential equations of a special type. Melezhik, V.S.; Somov, L.N. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Computing Techniques and Automation). 1981. 8p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700189.

A computational scheme of a high order of accuracy for solving a system of differential equations of a special type is suggested. Possibilities and peculiarities of algorithm realization are demonstrated by the calculation of μ-mesomolecule levels of hydrogen isotopes. The computational scheme under consideration functions stably in the whole discrete spectrum region of mesic molecules and its error at calculating the energy of the levels for a big grid of potentials representation (h=0.1) is approximately 3×10^{-3} eV. The use of the suggested algorithm within the framework of the adiabatic method enables to increase the accuracy of energy calculations for mesic molecule levels up to 10^{-2} - 10^{-3} eV.

30820 Interpretation of fine entropy from non-conservative statistical mechanics. Guiasu, S. (Universite du Quebec, Trois-Rivieres); Fronteau, J. *Hadronic Journal;* **5**: No. 5, 1627-1631(Aug 1982). (CONF-820136—).

From 1. international conference on non-poteatial interactions and their Lie-admissible treatment; Orleans, France (5 Jan 1982).

A link is established between the notion of a fine entropy and the difference between two distortions in Kullback's sense.

30821 Reciprocity principle in stochastic quantum mechanics. Brooke, J.A.; Guz, W.; Prugovecki, E. (Univ. of Toronto, Ontario). *Hadronic Journal;* **5**: No. 5, 1717-1733(Aug 1982). (CONF-820136—).

From 1. international conference on non-potential interactions and their Lie-admissible treatment; Orleans, France (5 Jan 1982).

Born's reciprocity theory can be combined with a recently proposed framework for quantum spacetime by requiring that the free test particle propagators obey the Born-Lande equation in ad-

dition to the Klein-Gordon equation. If, furthermore, the coordinate transition amplitudes in between various standards are required to be eigenfunctions of Born's metric operator, then a mass formula results which predicts linear dependence on spin of the squared rest mass of elementary particles. This procedure also leads to a guage and reciprocally invariant formulation of the relativistic canonical commutation relations.

30822 Classical mechanics and constants of motion. Steeb, W.H. (Universitaet Paderborn, Germany). *Hadronic Journal;* 5: No. 5, 1738-1747(Aug 1982). (CONF-820136—).

From 1. international conference on non-potential interactions and their Lie-admissible treatment; Orleans, France (5 Jan 1982).

We give three theorems concerning constants of motion in classical mechanics.

30823 Second virial coefficient of one dimensional gas. Mijatovic, M. (Univ. of Skopje, Yugoslavia). *Hadronic Journal;* 5: No. 5, 1774-1780(Aug 1982). (CONF-820136—).

From 1. international conference on non-potential interactions and their Lie-admissible treatment; Orleans, France (5 Jan 1982).

The second virial coefficient of a one dimensional gas is calculated using the expressions for the scattering amplitude. The scattering amplitude is chosen in the form of rational function of wave vector.

30824 Quantization, non-locality and lie-admissible formulations. Broadbridge, P. (Western Australian Inst. of Tech., South Bentley). *Hadronic Journal;* 5: No. 5, 1842-1858(Aug 1982). (CONF-820136—).

From 1. international conference on non-potential interactions and their Lie-admissible treatment; Orleans, France (5 Jan 1982).

If higher order wave equations are reduced to first order by supplementary conditions, then quadratic Hamiltonians of the most general type will emerge. Even then, for several reasons elaborated below, canonical quantization can still not be applied consistently. The benefit of clinging to a Lagrangian description of non-localized phenomena is then questionable. Non canonical quantization procedures should be considered. Some initial attempts at Lie-admissible quantization are examined critically here, and it is concluded that further recourse to experiment seems to be necessary.

30825 Principle of least action; some possible generalizations. Broucke, R. (Univ. of Texas, Austin). *Hadronic Journal;* 5: No. 5, 1901-1922(Aug 1982). (CONF-820136—).

From 1. international conference on non-potential interactions and their Lie-admissible treatment; Orleans, France (5 Jan 1982).

In this article we draw the attention to an important variational principle in dynamics: the Maupertuis-Jacobi Least Action Principle (MJLAP). This principle compares varied paths with the same energy h. We give two new proofs of the MJLAP (Sections 3 and 8) as well as a new unified variational principle which contains both Hamilton's Principle (HP) and the MJLAP as particular cases (Sections 4 and 9). The article also shows several new methods for the construction of a Lagrangian for a conservative dynamical system. As an example, we illustrate the theory with the classical Harmonic Oscillator Problem (Section 10). Our method is based on the theory of changes of independent variables in a dynamical system. It indirectly shows how a change of independent variable affects the self-adjointness of a dynamical system (Sections 5, 6, 7). Our new Lagrangians contain an arbitrary constant α, whose meaning needs to be studied, eventually in relation to the concepts of quantification or gauge transformations. The two important values of the constant α are 1 (Hamilton's principle) and 1/2 (Maupertuis-Jacobi Least Action Principle).

30826 (CONF-8103167—1) Automorphism theorems and half-range theory. Kaper, H.G. (Argonne National Lab., IL (USA)). 1981. Contract W-31-109-ENG-38. 10p. NTIS, PC A02/MF A01. Order Number DE83010599.

From 7. international conference on transport theory; Lubbock, TX, USA (17 Mar 1981).

In the Hilbert space approach to the linear-transport equation (homogeneous slab configurations) the fundamental question of half-range theory concerns the existence of a bijective mapping of the underlying function space onto itself. In this article we discuss the existence and continuity properties of this mapping. We interpret the results in terms of conditions on the boundary data for half-space and finite slab boundary value problems.

30827 (ITEF—120(1981)) Functional equations, transformation groups and dynamical systems. Petukhov, V.R. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1981. 12p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700183.

The theoretical group analysis of invariant varieties of general dynamical systems is carried out. From this viewpoint some aspects of stability and, in particular, the existence of asymptotic phase are studied.

30828 (JINR—5-82-69) Existence in Rsup(n) of positive solution of Derechlet problem for one nonlinear elliptic equation. Zhidkov, P.E. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Computing Techniques and Automation). 1982. 15p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700187.

Some problems of the existence of the solution of nonlinear elliptic equation $u-\Delta u=f(x, u)$ are studied. The results generalize the known theorems about the existence of a solution for the case of bounded domain. It is proved that the conditions needed for the solution in the bounded domain to exist and the condition lim f(x, u)=0 uniformly by any finite 'x'→infinity interval (a, b) for u endure the existence of the positive solution of the problem. An example is given which shows that the conditions for a solution in the bounded domain to exist are not sufficient for unbounded domain.

30829 Commutativity of products for adjoint operators. Agrawala, V.K. (Point Park Coll., Pittsburgh, PA). *Hadronic Journal;* 5: No. 5, 1632-1657(Aug 1982). (CONF-820136—).

From 1. international conference on non-potential interactions and their Lie-admissible treatment; Orleans, France (5 Jan 1982).

Let L deonote a finite dimensional semisimple Lie algebra over an arbitrary field of characteristic zero, and U = U(L) its universal enveloping algebra. Using the structure constants of L, one can define a vector product in the space Hom/sub L/(L,U) which makes it an associative algebra with identity. We prove here an earlier conjecture of Okubo and Myung that this algebra is commutative. We also define a scalar product which maps two elements of Hom/sub L/(L,U) into the center of U and show it to be commutative.

30830 Note on commutativity of adjoint operator algebras. Okubo, S. (Univ. of Rochester, NY); Myung, H.C. *Hadronic Journal;* 5: No. 5, 1658-1666(Aug 1982). (CONF-820136—). Contract AC02-76ER13065.

From 1. international conference on non-potential interactions and their Lie-admissible treatment; Orleans, France (5 Jan 1982).

V. Agrawala has recently proved our previous conjecture on communtativity of adjoint operator algebras for semisimple Lie algebras over a field of characteristic 0. In this note, we given an alternative proof of this conjecture which is considerably shorter than Agrawala's proof. Also, some other properties of adjoint operators are discussed for quasi-classical Lie algebras.

30831 Schroedinger equation for non-associative quantum mechanics and No-Go theorem. Okubo, S. (Univ. of Rochester, NY). *Hadronic Journal;* 5: No. 5, 1667-1700(Aug 1982). (CONF-820136—).

From 1. international conference on non-potential interactions and their Lie-admissible treatment; Orleans, France (5 Jan 1982).

Within an algebraic framework of non-associative quantum mechanics, a Hilbert space and the corresponding Schroedinger equation have been introduced into the theory as follows. The underlying non-associative operator algebra A is assumed to be flexible and Lie-admissible so that it is compatible with the Heisenberg equation of motion and quantization. A Hilbert space can be introduced into the theory as a faithful representation of the associated Lie algebra A^- of the Lie-admissible algebra A. However, if A^- is the standard Heisenberg algebra, and if the representation is irreducible, then it is shown that A must be associative, reproducing the standard associative quantum mechanics. Some discussions to circumvent this No-Go theorem are discussed. Especiallyyu if we are interested in the formulation of infinite component wave equations, then this difficulty can be avoided.

30832 Subspace decompositions invariant under ad/sub e/ for Lie-admissible algebras. Wene, G.P. (Univ. of Texas, San Antonio). *Hadronic Journal;* 5: No. 5, 1701-1716(Aug 1982). (CONF-820136—).

From 1. international conference on non-potential interactions and their Lie-admissible treatment; Orleans, France (5 Jan 1982).

Let A be a non-associative algebra of characteristic not two. It is known that the operator ad/sub x/ on A defined by ad/sub x/ (y) = [x,y] is a derivation of A^+ for all x if and only if A is flexible, and that A is Lie-admissible if and only if ad/sub x/ is a derivative of A^- for each x in A. Properties of a decomposition of A into subspaces invariant under ad/sub e/, e an idempotent element, are investigated. The very strong relations between the Peirce decomposition, the Lie-admissible condition and ad/sub e/, e an indempotent, are determined. Multiplicative relations among the subspaces of a are given.

30833 Extensions of Heisenberg's equations. Ilamed, Y. (Sorequ Nuclear Research Center, Yavne, Israel). *Hadronic Journal;* 5: No. 5, 1734-1737(Aug 1982). (CONF-820136—).

From 1. international conference on non-potential interactions and their Lie-admissible treatment; Orleans, France (5 Jan 1982).

In this note we present some natural extensions of the commutator that can be used for a generalization of Heisenberg's equations. An example of extension of the commutator xy-yx is p(x,y) = axbyc - aybxc, where a,b,c are noncommuting coefficients inserted between the variables. If tr denotes trace, then for this extension of the commutator the following inequalities are generally valid: trp(x,y) not equal to 0, trxp(x,y) not equal to 0, tryp(x,y) not equal to 0, trxp(y,z) not equal to trp(x,y)z; whereas for the commutator, p(x,y) = xy-yx, all these inequalities become identities. If a,b,c,x,y are elements of an associative algebra A, then the algebra A^*, whose elements are the same as those of A but with the new composition law x*y = axbyc - aybxc, is not a Lie algebra; whereas if the new composition law * is the commutator, then the algebra A^* is a Lie algebra. This note is a first attempt to write some extensions of the commutator that preserve the above mentioned properties of the commutator: trace zero, orthogonal to its arguments, associative and Lie-admissible.

30834 Interaction between conservative and gradient-like systems. Bruter, C.P. (Universite Paris, Creteil Cedex, France). *Hadronic Journal;* 5: No. 5, 1748-1753(Aug 1982). (CONF-820136—).

From 1. international conference on non-potential interactions and their Lie-admissible treatment; Orleans, France (5 Jan 1982).

This paper is devoted to the taxonomy of physical forces through recent mathematical results.

30835 Construction of the programmed motion. Mari, T.B. (Peoples' Friendship Univ., Moscow, USSR). *Hadronic Journal;* 5: No. 5, 1802-1811(Aug 1982). (CONF-820136—).

From 1. international conference on non-potential interactions and their Lie-admissible treatment; Orleans, France (5 Jan 1982).

The objective of this paper is to outline some problems of the programmed motion. The Erugin's method for the construction of the set of differential equations according to the prescribed integrals, which plays a crucial role in the development of such motions, is discussed. Possible modifications of the inverse problem of dynamics is pointed out. One of the modifications, such as the construction of the functional, which takes stationary value on the solution of the constructed equations, has been worked out in detail.

30836 Power-associative products on matrices. Benkart, G.M.; Osborn, J.M. (Univ. of Wisconsin, Madison). *Hadronic Journal;* 5: No. 5, 1859-1892(Aug 1982). (CONF-820136—).

From 1. international conference on non-potential interactions and their Lie-admissible treatment; Orleans, France (5 Jan 1982).

The main purpose of this work is to classify all power-associative products * that can be defined on the algebra A of n/sup x/ n matrices over a field F of characteristic not 2 or 3, satisfying the condition that x*y-y*x = xy-yx for all x,y ϵ A, where xy denotes the usual associative prouct in A. Such products * are automatically Lie-admissible, and it is shown that they are Jordan-admissible also. The motivation for this investigation comes from recent studies of the spin of a proton or neutron usig such products defined on the associative envelope of the spin 1/2 matrices. Included in the present paper are results showing how the classification of the products * on n/sup x/n matrices can be carried over to the associative envelope of spin s matrices for arbitrary s.

30837 General solution of the inverse problem of the calculus of variations. Tonti, E. (Universita di Trieste, Italy). *Hadronic Journal;* 5: No. 4, 1404-1450(Jun 1982). (CONF-820136—).

From 1. international conference on non-potential interactions and their Lie-admissible treatment; Orleans, France (5 Jan 1982).

Using the operator notation, we show that for every nonlinera problem there exists a variational formulation and, much more an infinity of them. The corresponding functionals are easily obtained. It follows that the requirement of the existence of a variational formulation for a given problem as a heuristic criterion to select admissible field equations, or equations of motion, or interactions, is to be abandoned.

30838 Symmetries and first integrals. Kobussen, J.A. (Eidgenossisch Institut fuer Reaktorforschung, Wuerenlingen, Switzerland). *Hadronic Journal;* 5: No. 4, 1451-1478(Jun 1982). (CONF-820136—).

From 1. international conference on non-potential interactions and their Lie-admissible treatment; Orleans, France (5 Jan 1982).

The partial differential equations for the vector field generating a symmetry transformation for a dynamical system described by a set of first-order ordinary differential equations is derived. Furthermore, a method for the explicit solution of these partial differential equations is discussed. This automatically leads to the first integrals of the system. It follows that the complete symmetry group is always infinitely dimensional and that the components of the vector feld generating the symmetry can be easily expressed in terms of arbitrary functions of the first integrals. This program has been worked out in full detail for the one-dimensional harmonic oscillator and for the n-dimensional linearly damped anisotropic oscillator. The results for the free particle and the one-dimensional oscillator are generalizations of results found in literature.

30839 Foundation of damped nonlinear schroedinger equations. Hasse, R.W. (Institut Laue-Langevin, Grenoble, Cedex, France); Albrecht, K. *Hadronic Journal;* 5: No. 4, 1479-1488(Jun 1982). (CONF-820136—).

From 1. international conference on non-potential interactions and their Lie-admissible treatment; Orleans, France (5 Jan 1982).

Coupled quantum systems are separated via coherent states or by time dependent perturbation theory to yield damped nonlinear Schroedinger equations.

30840 **Complex Schroedinger configuration plane and its relation to a classical and real two dimensional representation for one dimensional quantum theory.** Gilson, J.G. (Queen Mary Coll., London, England). *Hadronic Journal;* 5: No. 4, 1489-1516(Jun 1982). (CONF-820136—).

From 1. international conference on non-potential interactions and their Lie-admissible treatment; Orleans, France (5 Jan 1982).

It is indicated how a two dimensional alternative to one dimensional Schroedinger quantum theory is related to nonpotential Hamiltonian theory. The ability of this two dimensional alternative to generate classical electromagnetic and thermal images for the processes taking place on and off the real configuration axis, is explored. In particular, it is shown how the quantum potential is related to a deformation of the rest mass distribution over the two dimensional surface.

30841 **Reductive Lie-admissible algebras applied to H-spaces and connections.** Sagle, A.A. (Inst. for Basic Research, Cambridge, MA). *Hadronic Journal;* 5: No. 4, 1546-1563(Jun 1982). (CONF-820136—).

From 1. international conference on non-potential interactions and their Lie-admissible treatment; Orleans, France (5 Jan 1982).

An algebra A with multiplication xy is Lie-admissible if the vector space A with new multiplication $[x,y] = xy-yx$ is a Lie algebra; we denote this Lie algebra by A^-. Thus, an associative algebra is Lie-admissible but a Cayley algebra is not Lie-admissible. In this paper we show how Lie-admissible algebras arise from Lie groups and their application to differential geometry on Lie groups via the following theorem. Let A be an n-dimensional Lie-admissible algebra over the reals. Let G be a Lie group with multiplication function μ and with Lie algebra g which is isomorphic to A^-. Then there exiss a corrdinate system at the identify e in G which represents μ by a function $F:gxg \rightarrow g$ defined locally at the origin, such that the second derivative, F^2, at the origin defines on the vector space g the structure of a nonassociative algebra (g, F^2). Furthermore this algebra is isomorphic to A and $(g, F^2)^-$ is isomorphic to A^-. Thus roughly, any Lie-admissible algebra is isomorphic to an algebra obtained from a Lie algebra via a change of coordinates in the Lie group. Lie algebras arise by using canonical coordinates and the Campbell-Hausdorff formula. Applications of this show that any G-invariant psuedo-Riemannian connection on G is completely determined by a suitable Lie-admissible algebra. These results extend to H-spaces, reductive Lie-admissible algebras and connections on homogeneous H-spaces. Thus, alternative and other non-Lie-admissible algebras can be utilized.

30842 **Classification of flexible composition algebras, I.** Okubo, S. (Univ. of Rochester, NY). *Hadronic Journal;* 5: No. 4, 1564-1612(Jun 1982). (CONF-820136—).

From 1. international conference on non-potential interactions and their Lie-admissible treatment; Orleans, France (5 Jan 1982).

The following theorem has been proven. Let A be a finite-dimensional flexible composition algebra over a field F of characteristic not equal to 2, and not equal to 3. Then, A must be either a Hurwitz, or a para-Hurwitz, or a pseudo-octonion algebra. If the field F is of characteristic 2, then the dimension of a composition algebra is arbitrary in contrast to the standard dimensionality of 1, 2, 4, or 8. Finally, it is shown that any finite-dimensional flexible composition algebra over a field F of any characteristic is automatically a Malcev-admissible algebra.

30843 **Classification of flexible composition algebras, II.** Okubo, S. (Univ. of Rochester, NY). *Hadronic Journal;* 5: No. 4, 1613-1626(Jun 1982). (CONF-820136—).

From 1. international conference on non-potential interactions and their Lie-admissible treatment; Orleans, France (5 Jan 1982).

A classification of flexible composition algebras has been completed for the case of the field F being of characteristic 3. Together with the result proved in I, we find that any finite dimensional flexible composition algebra over a field F of characteristic not equal to 2 is either a Hurwitz, or a para-Hurwitz, or a pseudo-octonion algebra.

30844 **One-dimensional random walk with phase transition.** Percus, O.E.; Percus, J.K. (Courant Inst. of Mathematical Sciences, New York, NY). *SIAM (Society for Industrial and Applied Mathematics) Journal on Applied Mathematics;* 40: No. 3, 485-497(Jun 1981). Contract AC02-76ER03077.

We consider a random walk on a one-dimensional lattice. The walk is asymmetric but with different asymmetry on the right and left halves of the line. As the parameter space describing the two asymmetries is covered, several qualitatively different distributions result: limiting distribution, unimodal diffusion and bimodal diffusion. The corresponding parameter space phase boundaries are obtained, as well as the precise form of the distributions.

30845 **Extension of the Kibble-Slepian formula for hermite polynomials using boson operator methods.** Louck, J.D. (Los Alamos National Lab., NM). *Advances in Applied Mathematics;* 2: 239-249(1981).

The Kibble-Slepian formula expresses the exponential of a quadratic form $Q(x) = x/\text{sup } t/S(I + S)^{-1}x$, $S/\text{sup } t/ = S$, in n variables $x = \text{col}(x/\text{sub } 1/,...,x/\text{sub } n/)$ as a series of products of Hermite polynomials, thus generalizing Mehler's formula. This extension is restricted, however, to the case where the diagonal elements of the symmetric matrix S are all unity. We derive the general formula for an arbitrary symmetric matrix S, where I + S is positive definite, using techniques familar from the boson operator treatment of the harmonic oscillator in quantum mechanics.

30846 **(CEA-R—5153) Study of thermal and suprathermal electron density fluctuations in a plasma Focus.** Jolas, Alain. (Paris-11 Univ., 91 - Orsay (France); CEA Centre d'Etudes de Limeil, 94 - Villeneuve-Saint-Georges (France)). Feb 1982. 283p. (In French). NTIS (US Sales Only), PC A13/MF A01. Order Number DE83700210.

Thesis.

Thomson scattering of ruby laser light is used to study electron density fluctuations in a plasma Focus. One measures frequency and wavenumber spectra as well as angular distribution of fluctuations at given wavenumber. During the implosion phase, plasma layers with different characteristics are evidenced: a dense plasma layer where density fluctuations are isotropic with a thermal level, and a tenuous plasma layer where fluctuations are clearly anisotropic with a suprathermal level. The suprathermal fluctuations are attributed to microscopic instabilities due to the large electrical current which flows in the transition zone where the magnetic field mixes into the plasma. Thermal fluctuation measurements allow the determination of electron density and electron and ion temperatures of the dense layer plasma. One compares the observed characteristics of spectral components of suprathermal fluctuations with various types of known micro-instabilities. Relying on a simplified shock wave model it is deduced an average electrical resistivity greater than the classical Spitzer relation by two order of magnitudes. The lower hybrid drift instability appears to be dominant at the beginning of the implosion phase.

30847 **(CLM-R—210) JETCAT: a programme for computerised tomography.** Williamson, J.H. (UKAEA Culham Lab., Abingdon). Sep 1981. 35p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE83700211.

A new method of computerised tomography for efficient reconstruction from sparse data has been described by Williamson and Evans (Computerised Tomography for Sparse-Data Plasma Physics Experiments. CLM-P 656) and the Fortran programme JETCAT has been written to process the data, and for the interactive design of experimental assemblies to achieve optimal perform-

ance. This report, which should be read in conjunction with the programme listing attached, describes the overall structure of the programme, explains each subroutine, and specifies the input and the outputs that occur. The work was motivated by a design study for interferometry on the Joint European Torus (JET), but it can be applied to any other tomographic experiment with sparse data.

30848 **(CONF-830342—1) Equilibrium and stability studies for high-beta plasmas in torsatron/heliotron devices.** Carreras, B.A.; Charlton, L.A.; Cooper, W.A.; Garcia, L.; Harris, J.H.; Hender, T.C.; Hicks, H.R.; Holmes, J.A.; Lynch, V.E.; Masden, B.F. (Oak Ridge National Lab., TN (USA)). 1983. Contract W-7405-ENG-26. 13p. NTIS, PC A02/MF A01. Order Number DE83009857.

From US/Japan 3-D MHD workshop; Nagoya, Japan (8 Mar 1983).

Portions are illegible in microfiche products.

The equilibrium and stability properties of high-β plasmas in torsatron/heliotron devices have been investigated. Three numerical approaches have been used to study plasma equilibria for a range of coil configurations. The method of averaging permits fast equilibrium and stability calculations. Two fully 3-D codes, namely the Chodura-Schluter code, and the NEAR code recently developed at ORNL, are used to explore selected regions of parameter space. The resulting equilibria calculated with different methods are in good agreement. This validates the average method approach and enhances its usefulness. Results are presented for configurations with different aspect ratios and number of field periods. The role of the vertical field has also been studied in detail. The main conclusion is that for moderate aspect ratios (A/sub p/ $\leqq$ 8), the self-stabilizing effect of the magnetic-axis shift is large enough to open a direct path to the second-stability regime.

30849 **(DOE/ER/10603—3) Creation of high-temperature plasma through the use of a superfast Z-pinch.** Auslender, A.H. (Columbia Univ., New York (USA). School of Engineering and Applied Science). 1983. Contract AC02-80ER10613. 155p. NTIS, PC A08/MF A01. Order Number DE83011021.

Portions are illegible in microfiche products. Original copy available until stock is exhausted; Thesis.

This thesis is a theoretical and computational study of plasma temperature generated during a superfast Z-pinch hydrogen plasma implosion-driven by a modern multi-terrawatt pulsed power source. The solution of the time-dependent, one-dimensional, initial-value problem used to study and describe the pinch process includes the effects of kinetic instabilities, anomalous collisionality, plasma heating, and all relevant energy-loss mechanisms. Two dimensional effects are estimated by using a modified form of the one-dimensional model.

30850 **(DOE/ER/53140—7) Monte Carlo studies of tandem mirror plasmas interacting with waves in the ion cyclotron range of frequencies (ICRF). Progress report, January 1, 1983-March 31, 1983.** Todd, A.M.M. (Grumman Aerospace Corp., Princeton, NJ (USA)). Mar 1983. Contract AC02-82ER53140. 43p. NTIS, PC A03/MF A01. Order Number DE83009573.

The recent emphasis of our Monte Carlo ICRF calculations for Tandem Mirrors has been in the area of model and code development. A Monte Carlo Charge Exchange model has been incorporated and tested, and several variance reduction techniques have been added. Since this has constituted a major revision of the code, we are still in the process of testing and revising these latter improvements.

30851 **(DOE/ET/51013—65) D-D fusion neutron-spectra measurements and ion-temperature determination at Alcator C.** Fisher, W.A. (Massachusetts Inst. of Tech., Cambridge (USA). Plasma Fusion Center). Feb 1983. Contract AC02-78ET51013. 186p. (PFC/RR—83-3). NTIS, PC A09/MF A01. Order Number DE83011020.

A neutron spectrometer system has been designed, assembled, and used to measure the D-D neutron spectrum at Alcator C. The design of the shielding and collimation was critical to the successful measurement of the spectrum and involved an integral approach in which the neutronics of the Alcator C was exploited to obtain a successful system. The system consists of a ^{3}He ionization chamber mounted in a multi-component shield system. Essentially the outermost part of the shield and collimator has been designed to moderate the MeV-range neutrons to thermal energies. The inner part of the shield is designed to capture the thermalized neutrons with a minimum of gamma production. As a result, measurements during plasma discharges indicate that the ratio of the number of counts in the 2.45-MeV peak to the total number of neutron counts in the ion chamber is 1.67.

30852 **(DOE/ET/51013—72) Stochasticity induced by coherent wavepackets.** Fuchs, V.; Krapchev, V.; Ram, A.; Bers, A. (Massachusetts Inst. of Tech., Cambridge (USA). Plasma Fusion Center). Feb 1983. Contract AC02-78ET51013. 8p. (PFC/CP—83-2; CONF-830210—14). NTIS, PC A02/MF A01. Order Number DE83010254.

From 5. topical conference on radio frequency plasma heating; Madison, WI, USA (21 Feb 1983).

Portions are illegible in microfiche products.

We consider the momentum transfer and diffusion of electrons periodically interacting with a coherent longitudinal wavepacket. Such a problem arises, for example, in lower-hybrid current drive. We establish the stochastic threshold, the stochastic region Δv/sub stoch/ in velocity space, the associated momentum transfer j, and the diffusion coefficient D. We concentrate principally on the weak-field regime, tau/sub autocorrelation/ $<$ tau/sub bounce/.

30853 **(DOE/ET/51013—73) Relativistic two-dimensional theory of rf current drive.** Hizanidis, K.; Krapchev, V.; Bers, A. (Massachusetts Inst. of Tech., Cambridge (USA). Plasma Fusion Center). Feb 1983. Contract AC02-78ET51013. 8p. (PFC/CP—83-3; CONF-830210—15). NTIS, PC A02/MF A01. Order Number DE83010250.

From 5. topical conference on radio frequency plasma heating; Madison, WI, USA (21 Feb 1983).

Portions are illegible in microfiche products.

The quasilinear theory of Fisch is extended to include relativistic effects, as well as dependence of the tail perpendicular temperature T/sub perpendicular to/ on the parallel momentum P/sub parallel/. The problem involves a two-dimensional Fokker-Planck equation describing the quasilinear relaxation due to the rf spectrum in the presence of collisions and with relativistic effects taken into account. The rf spectrum applies in the region $p_0 \leqq p \leqq p_1$ where p_0 and p_1 are the left and right matching moments which respectively connect the region under consideration to the thermal bulk (T/sub B/ $\approx$ 1 keV) and an outmost Maxwellian tail (T $\approx$ 1 keV).

30854 **(DOE/ET/53088—83) Non-intrinsic ambipolar diffusion in turbulence theory.** Berk, H.L.; Molvig, K. (Texas Univ., Austin (USA). Inst. for Fusion Studies; Massachusetts Inst. of Tech., Cambridge (USA)). Mar 1983. Contract FG05-80ET53088. 12p. (IFSR—83). NTIS, PC A02/MF A01. Order Number DE83010321.

Ambipolar flow in a turbulent plasma is investigated by combining a WKB treatment of the waves with a turbulent collision operator resulting from either quasi-linear theory or certain renormalized turbulence theories. If the wave momentum has a flow from outgoing waves, then particle diffusion is not intrinsically ambipolar, and the time variation of the electric-potential profile is determined by the turbulent spectrum. However, in most cases of practical interest, as in the drift-wave problem, this effect is small; and, in steady state, equal rates of stochastic diffusion are predicted for electrons and ions.

30855 **(DOE/ET/53088—87) Ballooning-mode calculations in stellarators.** Berk, H.L.; Rosenbluth, M.N.; Shohet, J.L. (Texas Univ., Austin (USA). Inst. for Fusion Studies). Mar 1983. Contract FG05-80ET53088. 19p. (IFSR—87). NTIS, PC A02/MF A01. Order Number DE83010322.

In this note we: (1) write the ballooning equations in a manner that is readily integrated by a field line following code; (2) analyze the asymptotic properties of the ballooning mode equation to rederive the Mercier condition in a form particularly well suited for our computations; and (3) evaluate the low beta stability properties for three typical configurations, Proto-Cleo, Wistor U and a

Heliac where the magnetic fields are due to actual vacuum coils plus the currents arising from a localized pressure gradient.

30856 **(EUR-CEA-FC—1139) Low-m magnetic modes activity and disruptions in Tokamaks discharges.** Cotsaftis, Michel. (Association Euratom-CEA, Centre d'Etudes Nucleaires de Fontenay-aux-Roses, 92 (France). Dept. de Recherches sur la Fusion Controlee). Jan 1982. 55p. NTIS (US Sales Only), PC A04/MF A01. Order Number DE83700213.

It has been possible to follow the evolution of the low-m modes and discuss the various patterns of their interactions. The structure of the non linear mode has been studied, and shown to possess a periodic time dependence which, on a rational magnetic surface where q = m/n, and large aspect ratio case, reduces to the sum of two pure oscillations with different frequencies. The amplitude of the mode has been evaluated, and it is further shown that, in the limit cycle regime, the modes amplitudes is small enough for them not to interact. This is not the case when the limit cycle becomes unstable, where the modes can now intermix by direct coupling or overlapping, and create a disruption. For this reason, stability criteria, both linear and nonlinear, respectively corresponding to the beginning and the end of the existence of the limit cycle, have been explicitely set down, showing the three domains corresponding to the three previous steps in an adapted parameter space. It is possible to follow the detailed evolution of the low-m modes all along the discharge duration. For regular enough profiles, the mode (m = 2, n = 1) is shown to largely dominate and, when becoming nonlinearly unstable, to drive the disruptions ending the discharges. In other words, in the present picture, the disruption is interpreted as the instability of a limit cycle rather than the usual linear instability of the zero amplitude mode, ie, corresponds to a second branching, and not to a first one.

30857 **(ITF—81-92-R) Radiation of non-uniform plasma column.** Gvozdetskij, V.S.; Zagorodnij, A.G.; Krivtsun, I.V.; Yakimenko, I.P. (AN Ukrainskoj SSR, Kiev. Inst. Teoreticheskoj Fiziki). 1981. 26p. (In Russian). NTIS (US Sales Only), PC A03/MF A01. Order Number DE83700220.

The solution of the problem of thermal radiation is obtained for the case of non-uniform plasma column approximated by an arbitrary number of uniform cylindrical layers. Plasma is described within the frame of hydrodynamic model with gas-kinetic pressure of electrons and dynamics of molecular sub-system taken into account. The power of radiation is calculated on the basis of Langevin approach by using the reciprocity theorem to solve the problem of fluctuation field excitation by by random sources.

30858 **(KFTI—81-37) Deposition probes for analysing the boundary plasma parameters in closed magnetic traps. Analytical review.** Vasil'ev, V.V.; Vojtsenya, V.S. (AN Ukrainskoj SSR, Kharkov. Fiziko-Tekhnicheskij Inst.). 1981. 58p. (In Russian). NTIS (US Sales Only), PC A04/MF A01. Order Number DE83700221.

Operating conditions and prospects of using deposition probes for studying near-wall plasma parameters are examined. The operational experience of this technique is generalized with taking into account the possibilities of existing surface analysis methods. On the basis of the near-wall plasma model for tokamak and the deposition probe model, the relation is indicated between the ion flux density to the probe and the impurity deposition profile, on the one hand, and plasma parameters in the shade of the limiter, on the other hand. Typical construction of deposition probes, examples of their particular application and the results obtained are presented; several special tasks which can be solved by means of the mentioned technique are discussed. The comparison is made between the deposition probe method and standard plasma diagnostics. From the undertaken analysis it follows that the method seems to be promising for studying different parameters of a plasma in the limiter shade region. In addition, the main methods of the analysis of sample surfaces exposed to a plasma in order to obtain its most important characteristics are discussed briefly.

30859 **(ORNL/TM—8530) Neutral beam heating in stellarators: a numerical approach.** Hokin, S.A.; Rome, J.A.; Hender, T.C.; Fowler, R.H. (Oak Ridge National Lab., TN (USA)). Mar 1983. Contract W-7405-ENG-26. 27p. NTIS, PC A03/MF A01. Order Number DE83010458.

Calculation of neutral beam deposition and heating in stellarators is complicated by the twisty stellarator geometry and by the usual beam focusing, divergence, and cross-sectional shape considerations. A new deposition code has been written that takes all of this geometry into account. A unique feature of this code is that it gives particle deposition in field-line coordinates, enabling the thermalization problem to be solved more efficiently.

30860 **(PPPL—1969) Nonlinear gyrokinetic equations.** Dubin, D.H.E.; Krommes, J.A.; Oberman, C.; Lee, W.W. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Mar 1983. Contract AC02-76CH03073. 40p. NTIS, PC A03/MF A01. Order Number DE83010846.

Nonlinear gyrokinetic equations are derived from a systematic Hamiltonian theory. The derivation employs Lie transforms and a noncanonical perturbation theory first used by Littlejohn for the simpler problem of asymptotically small gyroradius. For definiteness, we emphasize the limit of electrostatic fluctuations in slab geometry; however, there is a straight-forward generalization to arbitrary field geometry and electromagnetic perturbations. An energy invariant for the nonlinear system is derived, and various of its limits are considered. The weak turbulence theory of the equations is examined. In particular, the wave kinetic equation of Galeev and Sagdeev is derived from an asystematic truncation of the equations, implying that this equation fails to consider all gyrokinetic effects. The equations are simplified for the case of small but finite gyroradius and put in a form suitable for efficient computer simulation. Although it is possible to derive the Terry-Horton and Hasegawa-Mima equations as limiting cases of our theory, several new nonlinear terms absent from conventional theories appear and are discussed.

30861 **(PPPL—1981) Efficient ion heating via finite-Larmor-radius ICRF.** Ono, M.; Wurden, G.A.; Wong, K.L. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Mar 1983. Contract AC02-76CH03073. 15p. NTIS, PC A02/MF A01. Order Number DE83010842.

Ion heating by externally launched ion Bernstein waves is investigated in the ACT-1 hydrogen plasma. Detailed measurements of wave absorption and of the ion temperature profiles have clearly identified various heating layers near the ion cyclotron harmonics of deuterium-like and tritium-like ions. The observed heating of 10 eV/WATT/10^{10} cm^{-3} and the power-balance estimates suggest excellent overall efficiency for FLR-ICRF heating.

30862 **(PPPL—1984) Collisional diffusion in a torus with imperfect magnetic surfaces.** White, R.B. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Mar 1983. Contract AC02-76CH03073. 28p. NTIS, PC A03/MF A01. Order Number DE83010844.

A Hamiltonian forumlation of the guiding-center drift equations is used to investigate the modification of neoclassical diffusion for low collisonality in a toroidal magnetic field with partially destroyed magnetic surfaces. The magnetic field is assumed to be given by the small perturbation of an axisymmetric system. The results are applicable to particle diffusion in realistic confinement systems, midway between axisymmetric and purely stochastic ones. Significant enhancement of electron diffusion over neoclassical rates is found. This increase can be accounted for by the contributions due to the first few island chains in the Fibonacci sequence generated by the zero-order islands, and by associated stochastic domains.

30863 **(PPPL—1991) Kinetic and resistive effects on interchange instabilities for a cylindrical model spheromak.** Hammett, G.W.; Tang, W.M. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Apr 1983. Contract AC02-76CH03073. 28p. NTIS, PC A03/MF A01. Order Number DE83010837.

The stabilizing influence of diamagnetic drift effects on ideal and resistive interchange modes is investigated. A resistive-ballooning-mode equation is derived using a kinetic theory approach and is applied to a cylindrical model spheromak equilibrium. It is found that these kinetic effects can significantly improve the β limits for collisionless interchange stability. For the resistive modes, the diamagnetic drift terms lead to growth rates which scale linearly with resistivity and are considerably reduced in magnitude. However, the resistive interchange growth rates estimated for near-term spheromak parameters remain significant.

30864 **(PPPL—1992) Theory of mode-induced beam-particle loss in tokamaks.** White, R.B.; Goldston, R.J.; McGuire, K.; Boozer, A.H.; Monticello, D.A.; Park, W. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Apr 1983. Contract AC02-76CH03073. 35p. NTIS, PC A03/MF A01. Order Number DE83010838.

Large-amplitude rotating magnetohydrodynamic modes have been observed to induce significant high-energy-beam particle loss during high-power perpendicular neutral-beam injection on PDX. A Hamiltonian formalism for drift-orbit trajectories in the presence of such modes is used to study induced particle loss analytically and numerically. Results are in good agreement with experiment.

30865 **(PPPL—1993) Fast-ion orbit effects during ion-cyclotron range of frequency experiments on the Princeton large torus.** Kaita, R.; Goldston, R.J.; Beiersdorfer, P.; Herndon, D.L.; Hosea, J.; Hwang, D.Q.; Jobes, F.; Meyerhofer, D.D.; Wilson, J.R. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Apr 1983. Contract AC02-76CH03073. 16p. NTIS, PC A02/MF A01. Order Number DE83010840.

The angular dependence of the flux of fast neutrals was measured in conjunction with Ion Cyclotron Range of Frequency (ICRF) experiments on the Princeton Large Torus (PLT). We found a regime where the energetic tail of the charge-exchange neutral flux was strongly anisotropic. Unexpectedly, however, the flux from co-moving ions was peaked at an angle intermediate between perpendicular and parallel. This could be the consequence of a preferential filling of that class of banana orbits whose tips are localized within the ion cyclotron resonance layer.

30866 (UCRL—52000-83-2, pp 21-29) **Neutron diagnostics for magnetically confined plasmas.** Feb 1983. NTIS, PC A03/MF A01.

In Energy and Technology Review.

Spectrometers were developed for measuring neutrons emitted by hot plasmas, enabling one to obtain information on mean ion energies and other parameters of interest in magnetic fusion experiments.

30867 **(UCRL—88568) Power deposition profiles in Maxwellian magneto-active plasmas.** Ziolkowski, R.W.; Peterson, J.C. (Lawrence Livermore National Lab., CA (USA)). Feb 1983. 6p. (CONF-830210—10). NTIS MF A01. Order Number DE83009321.

From 5. topical conference on radio frequency plasma heating; Madison, WI, USA (21 Feb 1983).

Microfiche only, copy does not permit paper copy reproduction.

The numerical modeling of the microwave power deposition in a plasma for waves that are launched from an arbitrary array of pyramidal horns will be described. The waves are modeled in three dimensions with geometrical optics assuming the plasma is cold, magneto-active and Maxwellian. The power absorption at the fundamental harmonic is calculated along those rays with warm plasma absorption formulas. A newly developed post-processor synthesizes power deposition profiles from these ray tracing results. Graphical output includes the power density as a function of the distance along the axis of the plasma and the physical or midplane radius, the z-integrated power density as a function of the midplane radius, and the cumulative power absorbed as a function of the midplane radius. Examples for ECRH in the TMX-U and the axisymmetric MFTF-B tandem mirror machines at LLNL will be presented.

30868 **Three-dimensional theory of waveguide-plasma coupling.** Bers, A.; Theilhaber, K.S. (Massachusetts Inst. of Tech., Cambridge (USA). Plasma Fusion Center). *Nuclear Fusion;* 23: No. 1, 41-48(Jan 1983).

A general, linear theory of coupling electromagnetic fields from free-space waveguide arrays to an inhomogeneous plasma in a magnetic field is presented. In contrast to previous analyses, which assumed parallel-plate waveguides, waveguides having closed cross-sections of arbitrary shape are considered; full account is taken of all the waveguide modes. Far away from the coupling region, the plasma is assumed to be absorptive and the waveguides to propagate only their dominant modes. The formulation is geared to obtain the reflection coefficients in the waveguides and the excitation of waves in the plasma. The results are applicable to RF heating of plasmas whose size is large compared to the waveguide array, as would be the case in a fusion reactor, and valid for the frequency regimes of either ion-cyclotron (harmonic), or lower-hybrid, or electron-cyclotron (harmonic) heating.

30869 **Heating experiments in the ion cyclotron range of frequencies on EBT-S.** Owens, T.L.; Mullen, J.H. (McDonnell Douglas Corp., St. Louis, MO (USA)); Baity, F.W.; Davis, W.A.; Eldridge, O.C.; Hillis, D.L. (Oak Ridge National Lab., TN (USA)). *Nuclear Fusion;* 23: No. 1, 49-62(Jan 1983).

Heating experiments in EBT-S have been conducted in steady-state plasmas at continuous wave power levels up to 20 kW in the ion cyclotron range of frequencies (15-30 MHz). Power coupling efficiencies and wave propagation measurements have been obtained at reduced power levels over the frequency range 15-50 MHz. Wave dispersion properties are in qualitative agreement with simplified theory. Substantial ion heating is obtained in deuterium plasmas above 25 MHz, the point at which wave propagation begins. At this frequency, only the 3rd-10th ion cyclotron harmonics of deuterium are present in the core plasma. Ion heating under these circumstances is considerably greater than theoretically predicted for EBT-S parameters. A residual proton component is also heated. However, collisional energy transfer from the protons to the deuterons is too small to account for the deuteron heating. The stored energy of the relativistic electron annuli increases substantially with the application of wave power. Near the antenna, the stored energy more than doubles at a power level of 15 kW. The mechanism producing this dramatic effect is not well understood at present. A small reduction in the ambipolar electric field is also observed during wave heating.

30870 **Scaling of energy confinement with minor radius, current and density in Doublet III Ohmically heated plasmas.** Ejima, S.; Petrie, T.W.; Riviere, A.C. (General Atomic Co., San Diego, CA (USA)). *Nuclear Fusion;* 22: No. 12, 1627-1649(Dec 1982).

Portions are illegible in microfiche products. Original copy available until stock is exhausted5 refs.

The dependence of plasma energy confinement on minor radius, density and plasma current is described for Ohmically heated near-circular plasmas in Doublet III. A wide range of parameters is used for the study of scaling laws; the plasma minor radius defined by the flux surface in contact with limiter is varied by a factor of 2 (a = 44, 32, and 23 cm), the line average plasma density, nsub(e)-bar, is varied by a factor of 20 from 0.5 to 10 x 10^{13} cm^{-3} (nsub(e)-bar R_o/Bsub(T) = 0.3 to 6 x 10^{14} $cm^{-2}.kG^{-1}$) and the plasma current, I, is varied by a factor of 6 from 120 to 718 kA. The range of the limiter safety factor, qsub(L), is from 2 to 12. - For plasmas with a = 23 and 32 cm, the scaling law at low nsub(e)-bar for the gross electron energy confinement time can be written as (s, cm) tausub(Ee)sup(G) approx.= 3.6 x 10^{-19} nsub(e)-bar a^2 qsub(c)sup(3/4), where qsub(c) = $2\pi a^2$Bsub(T)/μ_oIR_o. For the 44-cm plasmas, tausub(Ee)sup(G) is about 1.8 times less than predicted by this scaling, possibly owing to the change in limiter configuration and small plasma-wall separation and/or the aspect ratio change. At high nsub(e)-bar, tausub(Ee)sup(G) saturates and in many cases decreases with nsub(e)-bar but increases with I in a classical-like manner. The dependence of tausub(Ee)sup(G) on a is considerably weakened. The confinement behaviour can be explained by taking an ion thermal conductivity 2 to 7 times that given by Hinton-Hazeltine's neoclassical theory with a lumped-

Zsub(eff) impurity model. Within this range the enhancement factor increases with a or a/R_0. The electron thermal conductivity evaluated at half-temperature radius where most of the thermal insulation occurs sharply increases with average current density within that radius, but does not depend on a within the uncertainties of the measurements.

30871 **Zero-dimensional simulations of reversed-field pinch experiments.** Schoenberg, K.F.; Gribble, R.F.; Phillips, J.A. (Los Alamos National Lab., NM (USA)). *Nuclear Fusion;* **22**: No. 11, 1433-1441(Nov 1982).

A zero-dimensional (0-D) simulation of a Reversed-Field Pinch (RFP) experiment is presented. Plasma behaviour is addressed by a model that couples the toroidal and poloidal RFP magnetic fields in a prescribed, non-linear manner. The simulation is used to study pinch parameters such as magnetic field energy, power loss, plasma resistance and resistivity, and conductivity temperature as functions of time. The methodology of the 0-D simulation, its sensitivity to model-dependent effects, and application examples from the Los Alamos ZT-40M RFP experiment are given.

30872 **Effect of plasma current on restoring force in Ohmically heated stellarators.** Yamagishi, T. (General Atomic Co., San Diego, CA (USA)). *Nuclear Fusion;* **22**: No. 11, 1525-1528(Nov 1982).

Letter-to-the-editor.

In Ohmically heated stellarators the diamagnetic effect of a plasma current on the effective vertical magnetic field induced by a toroidal shift of the plasma column in the helical magnetic field is studied. The theoretical result agrees well with the experimental data from the JIPP T-II stellarator.

30873 **Effect of gas recycling and secondary electron emission on the axial power flow in an open-ended device.** Porter, G.D. (California Univ., Livermore (USA). Lawrence Livermore National Lab.). *Nuclear Fusion;* **22**: No. 10, 1279-1289(Oct 1982).

A model analyses the effect of secondary electron emission and gas recycling on open-ended fusion devices. Secondary emission is assumed to be limited by space-charge effects. It is also assumed that cold plasma is created by the ionization of gas recycled from the end wall. The axial power flow in the device was increased by these phenomena. This article shows that fairly simple techniques can control the enhancement of the power losses. The results of this model are in agreement with measurements made on the TMX experiment. Estimates made for the TMX Upgrade and MFTF-B indicate that these effects will not significantly enhance the axial power losses.

30874 **End-wall plasma characteristics in the tandem mirror experiment.** Coakley, P.; Hershkowitz, N. (Iowa Univ., Iowa City (USA)); Porter, G.D. (California Univ., Livermore (USA). Lawrence Livermore National Lab.). *Nuclear Fusion;* **22**: No. 10, 1321-1327(Oct 1982).

An array of emitting and collecting probes was used to measure the characteristics of the plasma at the end wall of TMX. The emitting probes indicated a plasma potential with a characteristic value of approximately 8 V, measured at 2 cm and 10 cm from the grounded wall. The potential in the plug varied from 300 to 1000 V. The collecting probes indicated a cold plasma present near the wall, with an electron temperature of about 5 eV and a cold-electron density of about 2×10^9 cm^{-3}, while the hot-ion density at the wall was about 6×10^8 cm^{-3}. The density of electrons in the plug was about 2×10^{12} cm^{-3}. The electron temperature measured at the wall was decoupled from the temperature of the electrons in the plug and the central cell. The plasma wall sheath was established to balance the flux of hot ions and cold electrons. An additional species of electrons, i.e. secondary electrons produced at the end wall, was also identified. These secondary electrons had a directed energy comparable to the local plasma potential, an energy spread of less than 7 eV, and a density of about 4×10^8 cm^{-3}. The experimental results are shown to be consistent with a simple model involving cold-gas recycling from the end wall.

30875 **Inductive energy extraction from a plasma.** Auerbach, S.P. (California Univ., Livermore (USA). Lawrence Livermore National Lab.). *Nuclear Fusion;* **22**: No. 10, 1329-1339(Oct 1982).

Efficient operation of a moving-ring reactor requires inductive energy extraction from the plasma after the thermonuclear burn is complete. The process of inductive energy extraction from a plasma is studied in this paper. An energy conservation theorem is proven, whose content is that the amount of energy which may be extracted inductively from a plasma is the sum of three terms: the self-inductance energy of the plasma, the energy associated with the mutual inductance between the plasma and the external field coils, and the plasma thermal energy. These terms are evaluated for a spherical Hill's vortex equilibrium. For this equilibrium, the sum of the first two terms is negative, i.e. for fixed external field the magnetic energy is lower when the plasma is present than when it is absent. This surprising fact is discussed and shown not to lead to any unphysical consequences. A careful analysis of a conceptual energy extraction device is given, with emphasis on the role of inductive interactions between the plasma and the external coils.

30876 **Is fusion reactivity in TFTR affected by distortions of the bulk ions from Maxwellians.** Mirin, A.A.; Tomaschke, G.P. (California Univ., Livermore (USA). Lawrence Livermore National Lab.). *Nuclear Fusion;* **22**: No. 10, 1380-1382(Oct 1982).

Letter-to-the-editor.

It is known that during the heating of a warm-background ion species by a more energetic ion species, the warm-ion distribution function departs from that of a Maxwellian. It is also known that the velocity dependence of the particle and energy loss mechanisms is a crucial factor in determining the manner in which the bulk ions deviate from Maxwellians. The question of the extent to which these distortions cause an enhanced fusion reactivity in a TFTR-like plasma is addressed. For the cases presented here, no enhancement is found.

30877 **ICRF heating, particle transport and fluctuations in tokamaks.** Taylor, R.J.; Lee, P.; Luhmann, N.C. Jr. (California Univ., Los Angeles (USA)). pp 61-72 of Plasma physics and controlled nuclear fusion research 1980. Proceedings of the eighth international conference held by the IAEA in Brussels, 1-10 July 1980. Vienna, Austria; International Atomic Energy Agency (1981).

From 8. international conference on plasma physics and controlled nuclear fusion research; Brussels, Belgium (1 Jul 1980).

The paper consists of three parts. Part A reports the results of ICRF heating at power levels up to five times Ohmic heating. The ions were heated from 50 to 200eV while the electron temperature increased from 150 to 250eV under optimum conditions. Impurity generation is controlled by Ti or Cr in-situ vapour deposition of about 100A thick. Heating is observed to vanish as the plasma density is raised above 10^{13}cm^{-3} in Macrotor and 10^{14}cm^{-3} in Microtor. Below these densities and at high power levels, the plasma particle confinement time, and consequently the energy confinement, diminishes with power input. Density clamping, drop or rise are produced depending on wall conditions. Part B describes magnetic field fluctuation measurements on the Caltech research tokamak. At low frequencies, $f<100$kHz, the approximately B spectrum is dominated by an $m=2$ or 3 mode and its harmonics, while at high frequencies, $100\text{kHz}<f<1\text{MHz}$, the approximately B fluctuations are broadband and have short correlation lengths. Part C reports on FIR scattering measurements of density fluctuations in the Microtor tokamak. The fluctuations exhibit a power law falloff of ωsup(-2.5) between 100kHz and 500kHz and ksup(-3.5) for 6cm^{-1} approximately $<$ k approximately $<$ 20cm^{-1}. A comparison of these measurements with theoretical models and with transport is presented.

30878 Fast-wave ion cyclotron heating in the Princeton Large Torus. Hosea, J.; Boyd, D.; Bretz, N. (Princeton Univ., NJ (USA). Plasma Physics Lab.). pp 95-103 of Plasma physics and controlled nuclear fusion research 1980. Proceedings of the eighth international conference held by the IAEA in Brussels, 1-10 July 1980. Vienna, Austria; International Atomic Energy Agency (1981).

From 8. international conference on plasma physics and controlled nuclear fusion research; Brussels, Belgium (1 Jul 1980).

Recent experimental results for ICRF heating in PLT are presented. For the two-ion regime in D-H or D-^{3}He plasmas minority H and ^{3}He ions are found to absorb the RF power and transfer it to the deuterons and electrons in accordance with Fokker-Planck theory. The deuteron heating rate is approximately $3eV x 10^{13} cm^{-3}.kW$ for H and approximately $6eV x 10^{13} cm^{-3}.kW$ for ^{3}He minorities. Neutron fluxes of approximately $3x10^{11} s^{-1}$ corresponding to a Tsub(d) approximately 2keV (ΔTsub(d) approximately 1.2keV) have been produced with Psub(RF) approximately 620kW at anti nsub(e) approximately $2.9x10^{13} cm^{-3}$. Neutron energy spectra and mass-sensitive charge-exchange spectra indicate Maxwellian deuteron distributions. In addition, D-^{3}He fusion reaction rates approximately $>10^{12} s^{-1}$ have been produced by the energetic ^{3}He ions. For the second-harmonic regime, initial heating results for an H plasma at Psub(RF) approximately 140kW are consistent with the Fokker-Planck theory, and the bulk heating rate is comparable with that of D-heating in the D-H minority regime.

30879 Initial reversed-field pinch experiments on ZT-40 and recent advances in RFP theory. Baker, D.A.; Buchenauer, C.J.; Burkhardt, L.C. (Los Alamos Scientific Lab., NM (USA)). pp 291-300 of Plasma physics and controlled nuclear fusion research 1980. Proceedings of the eighth international conference held by the IAEA in Brussels, 1-10 July 1980. Vienna, Austria; International Atomic Energy Agency (1981).

From 8. international conference on plasma physics and controlled nuclear fusion research; Brussels, Belgium (1 Jul 1980).

The ZT-40 reversed-field pinch (RFP) has been operated in several modes: (1) without reversed toroidal field, (2) with self reversal, and (3) with aided reversal. In the RFP mode, with fill pressures below 15mtorr, current decay times are significantly lengthened over non-reversed-field operation. Temperatures have been obtained up to approximately 70eV at peak current, well above the troublesome O VI radiation barrier. Quiet periods, approximately 0.1ms, have been observed in magnetic field and plasma density fluctuations. Recent operation with a power crowbar overcomes external circuit losses, which limit current decay times to approximately 0.3ms with a passive crowbar. An analytic Ohmic heating and ignition model confirms and provides guidance for transport codes. Non-dissipative formation schemes have been analysed and ideal MHD-stable evolution and burn scenarios have been found. Particle and fluid simulations have produced qualitative agreement with respect to the non-linear behaviour of m=0 resistive g-modes. Helical Ohmic reversed-field states are produced by a 2-D dynamical simulation, and non-linear analytic work describes the final state. A fast resistive MHD code for linear stability has clarified the relations between several kinds of resistive instablities. Ballooning modes and g-modes in systems with arbitrary magnetic shear, including resistivity and viscosity, have been studied in a unified treatment with growth rate versus wavenumber showing the existence of important cutoffs. Finally, work on auxiliary heating for profile control is in progress with a guiding-centre code and a more complete model containing gyroresonant effects.

30880 High-beta tokamak stability studies. Chu, C.K.; Elkin, D.; Georgiou, G. (Columbia Univ., New York (USA). Plasma Physics Lab.). pp 339-346 of Plasma physics and controlled nuclear fusion research 1980. Proceedings of the eighth international conference held by the IAEA in Brussels, 1-10 July 1980. Vienna, Austria; International Atomic Energy Agency (1981).

From 8. international conference on plasma physics and controlled nuclear fusion research; Brussels, Belgium (1 Jul 1980).

Recent experimental and theoretical research at Columbia University on MHD stability limits of tokamaks is summarized. Data obtained from Torus II indicate that it can operate in the second, high-beta stable regime with $\beta(0)$ approximately 30%, average value of β) approximately 10%, nsub(e)(0) approximately $3x10^{21} m^{-3}$ and T approximately 100eV. As the plasma cools, density fluctuations characteristic of a ballooning instability are observed. Simulations are compared with experimental observations. Theoretical results for ballooning and kink-mode instabilities are described.

30881 Reactor systems studies of alternative fusion concepts. Krakowski, R.A.; Miller, R.L.; Bathke, C.G. (Los Alamos Scientific Lab., NM (USA)). pp 607-619 of Plasma physics and controlled nuclear fusion research 1980. Proceedings of the eighth international conference held by the IAEA in Brussels, 1-10 July 1980. Vienna, Austria; International Atomic Energy Agency (1981).

From 8. international conference on plasma physics and controlled nuclear fusion research; Brussels, Belgium (1 Jul 1980).

The results from recent systems studies of seven alternative fusion reactor concepts are presented.

30882 Charge-exchange pumping of thermalized alpha particles in steady-state tandem-mirror reactors. Hamilton, G.W.; Logan, B.G. (Lawrence Livermore National Lab., CA). *Comments on Plasma Physics and Controlled Fusion;* **6**: No. 4, 139-145(1981). Contract W-7405-ENG-48.

Thermal alpha particles can be removed from tandem-mirror reactors (TMR) by charge-exchange on neutral beams injected into the potential wells of thermal barriers. This alpha-removal method has the advantage that 3.5-MeV alphas, magnetically trapped in the central cell, will not be removed until they have transferred almost all their energy to the reacting plasma, which facilitates ignition in the central cell. Under steady-state conditions the thermalized alpha particles will constitute 4% to 10% of the plasma density in a TMR.

30883 Null ellipticity in magneto-optics. O'Connell, R.F.; Wallace, G. (Louisiana State Univ., Baton Rouge). *Solid State Communications;* **39**: 993-995(1981). Contract AS05-79ER10459.

We determine the relationship between the photon, cyclotron, collision and plasma frequencies which ensures a null ellipticity for electromagnetic wave propagation in a free-carrier magnetoplasma. A comparison is made with the condition for null Faraday rotation.

30884 (AECL—7424) Fissile fuel breeding in DT fusion reactor blankets. Kushneriuk, S.A.; Wong, P.Y. (Atomic Energy of Canada Ltd., Chalk River, Ontario. Chalk River Nuclear Labs.). Nov 1981. 59p. NTIS (US Sales Only), PC A04/MF A01. Order Number DE83700209.

Results of neutronic evaluations of fissile fuel breeding in a variety of DT fusion hybrid-reactor blankets are presented. The blankets are of the fast-fission or fission-suppressed rather than fission-enhanced designs, i.e. in the blankets considered emphasis is on fissile fuel rather than power production. For ^{233}U breeding, when Li metal is the coolant for the first wall and the graphite moderator and the tritium breeding constituent of the blanket, the number of atoms of ^{233}U produced per fusion in blankets that could be of practical interest is in the range 0.5 - 0.68, with the lower value applying to water-cooled ThO_2 fertile fuel, the upper to gas-cooled Th-metal fuel located next to the reactor first wall. Neutron multipliers like Pb or Be can increase the production to about 0.74. For ^{239}Pu breeding, the production ratio in practical blankets is 0.6 - 1.64, with the best results being for gas, Na- or Li-metal-cooled U-metal fuels located adjacent to the first wall (the U is depleted uranium). Gas-cooled U-Th-metal blankets, optimized for ^{233}U breeding, yield 0.76 atoms of ^{233}U and 0.38 atoms of ^{239}Pu. The blanket energy multiplication factors are in the range 1.6 - 2.5 for Th blankets, 2.5 - 9.0 for U blankets and approximately 5.5 for the U-Th-metal blanket. The tritium breeding ratio in all blankets is 1.075. Blankets with other first wall, coolant and tritium breeding con-

stituents are also considered. The fusion power requirements of hybrids that could supply the fuel needs of thorium-burning CANDU power reactors, and the allowed costs for building the hybrids are indicated.

30885 **(ANL/FPP/TM—167) Irradiation and compatibility testing of Li_2O materials at EBR-II.** Porter, D.L.; Krsul, J.R.; Laug, M.T.; Tetenbaum, M.; Walters, L.C. (Argonne National Lab., IL (USA)). Dec 1982. Contract W-31-109-ENG-38. 53p. NTIS, PC A04/MF A01. Order Number DE83010691.

A study was made of the neutron-irradiation behavior of ^{6}Li-enriched Li_2O material in EBR-II. In addition, a stress corrosion study was performed ex-reactor to test compatibility of Li_2O materials with a variety of stainless steels. Results of the irradiation testing showed that tritium and helium retention in the Li_2O (~ 89% dense) lessened with neutron exposure. Helium tritium retention appeared to approach steady-state after ~ 1% ^{6}Li burnup. The effect was likely caused by the formation of open porosity in the pellets. The stress corrosion studies, using a 316 stainless steel (Ti-modified) and a 35% Ni alloy, showed that stress does not enhance the corrosion, and that dry Li_2O is not significantly corrosive, the LiOH content producing the corrosive effects. Corrosion, in general, was not severe as a passivation in sealed capsules seemed to occur after a time greatly reducing corrosion rates.

30886 **(CLM-R—219) Introduction to hybrid fusion.** Reynolds, J.A. (UKAEA Culham Lab., Abingdon). Jan 1982. 6p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700212.

This report gives a brief introduction to some hybrid fusion proposals. The idea is to take advantage of the high neutron energy in fusion compared to fission either to breed fuel more efficiently than in a fast reactor, or increase the power output by fission of U^{238} or transmute radioactive waste. The penalty is an increased cost and complexity of the blanket and the loss of environmental and safety arguments for fusion systems which rest on their low inventory of radioactive materials.

30887 **(CONF-810804—26) Isotopic enrichment of fuels for D-T fusion reactors.** Misra, B.; Clemmer, R.G.; Finn, P.A. (Argonne National Lab., IL (USA)). 1981. Contract W-31-109-ENG-38. 8p. NTIS, PC A02/MF A01. Order Number DE83009033.

From National heat transfer conference; Milwaukee, WI, USA (2 Aug 1981).

Portions are illegible in microfiche products.

Isotopic enrichment scenarios using cryogenic distillation were developed for a near-term D-T burning fusion-reactor design (ETF) as well as for a commercial fusion-reactor design (STARFIRE). The analytical results of studies of spent-fuel reprocessing for ETF show that isotopic enrichment can be carried out to meet fuel-purity requirements by a system consisting of a 5-column distillation cascade and two chemical equilibrators. For STARFIRE, the analytical results show that, for a fixed number of columns and chemical equilibrators in a reprocessing syste, the compositions of the recycle streams depend strongly on whether the two fuel streams (plasma exhaust and blanket) are processed separately or mixed and then processed as a single stream.

30888 **(CONF-830406—6) Engineering testing requirements in FED/INTOR.** Abdou, M.A.; Nygren, R.E.; Morgan, G.D.; Trachsel, C.A.; Wire, G.; Oppermann, E.; Puigh, R.; Gold, R.E. (Argonne National Lab., IL (USA); McDonnell Douglas Astronautics Co., St. Louis, MO (USA); Hanford Engineering Development Lab., Richland, WA (USA); Westinghouse Research Labs., Pittsburgh, PA (USA)). Oct 1982. Contract W-31-109-ENG-38. 3p. NTIS, PC A02/MF A01. Order Number DE83009589.

From 5. topical meeting on technology of fusion energy; Knoxville, TN, USA (26 Apr 1983).

The FED/INTOR critical issues activity has addressed three key testing requirements that have the largest impact on the design, operation and cost of FED/INTOR. These are: (1) the total testing time (fluence) during the device lifetime, (2) the minimum number of back-to-back cycles, and (3) the neutron wall load (power density in the first wall/blanket). The testing program activities were structured into three tasks in order to define the benefits, and in some cases, costs and risks of these testing requirements. The three tasks were carried out with wide participation of experts from a number of organizations in the United States. Similar effort was performed by Japan, the European Community and the Soviet Union.

30889 **(CONF-830406—10) Key issues of FED/INTOR impurity control system.** Abdou, M.A. (Argonne National Lab., IL (USA)). Oct 1982. Contract W-31-109-ENG-38. 3p. NTIS, PC A02/MF A01. Order Number DE83009595.

From 5. topical meeting on technology of fusion energy; Knoxville, TN, USA (26 Apr 1983).

A key part of the FED/INTOR activity over the past year has focused on examining the critical issues and developing credible physics and engineering solutions for the impurity control system. The primary emphasis of the work was on the edge-region physics, plasma-wall interaction, materials, engineering and magnetic considerations of the poloidal divertor and pump limiter.

30890 **(CONF-830406—22) Waste management of first wall and blanket structural materials for tokamak fusion reactors.** Vogler, S.; Steindler, M.J.; Jung, J. (Argonne National Lab., IL (USA)). 1983. Contract W-31-109-ENG-38. 5p. NTIS, PC A02/MF A01. Order Number DE83010770.

From 5. topical meeting on technology of fusion energy; Knoxville, TN, USA (26 Apr 1983).

A comparison has been made of the induced radioactivities in the first wall and structural materials of the breeder blanket in the high-flux region for two different fusion-reactor types. One system is the STARFIRE, a tokamak reactor with PCA, a modified stainless steel, as a first wall and a $LiAlO_2$ breeder blanket; the other is a reactor based on the STARFIRE design with a vanadium alloy as the first wall and structural material, and circulating molten lithium as the breeder/coolant. The recycling or disposal of these structural materials is evaluated.

30891 **(DOE/DP/40168—1) ArF short-pulse extraction studies. Final technical report, 18 September 1981-18 February 1983.** Mandl, A. (Avco-Everett Research Lab., Inc., Everett, MA (USA)). Feb 1983. Contract AC08-81DP40168. 45p. NTIS, PC A03/MF A01. Order Number DE83011125.

The experimental apparatus including e-beam pulse diagnostics is discussed. The relative fluorescence and laser output for various gas mixtures is presented and the significant improvement in laser performance for Ne buffered mixtures, allowing scaling to high pressures and high Joules per liter, is discussed. The energy deposition measurements for Ar and Ne buffered mixtures are presented. Accurate deposition measurements are necessary for a meaningful measure of the laser output efficiency. Background absorption measurements important for accessing the scalability of the ArF system are presented. The sidelight suppression experiments are discussed and the laser efficiency measurements are shown. Finally, a discussion of the measurements with their implications for the ArF system is presented in the concluding section.

30892 **(DOE/ET/51013—71) Antenna-plasma coupling theory for ICRF heating.** Ram, A.; Bers, A. (Massachusetts Inst. of Tech., Cambridge (USA). Plasma Fusion Center). Feb 1983. Contract AC02-78ET51013. 8p. (PFC/CP—83-1; CONF-830210—17). NTIS, PC A02/MF A01. Order Number DE83010253.

From 5. topical conference on radio frequency plasma heating; Madison, WI, USA (21 Feb 1983).

Portions are illegible in microfiche products.

An analytical and numerical study of the antenna-plasma coupling theory in the slab geometry is presented. We model the antenna to be a current sheet of finite poloidal and toroidal dimensions which is screened from the plasma by a sheath of anisotropic conductivity that shorts out locally the toroidal component of the rf field. The effect of the feed lines that carry the current to the antenna is ignored. The plasma is described by its cold dielectric tensor having an inhomogeneous density and applied magnetic field. The density at the sheath is assumed to be large enough to

allow us to consider the excitation of only the fast component of the ICRF wave. The radiation impedance of, and the field excitation by, such an antenna structure are calculated. The analytical analysis is carried out when we ignore the explicit spatial derivatives of the plasma dielectric tensor elements that occur in the equations describing the plasma fields.

30893 **(DOE/ET/51013—74) Numerical investigation of ICRF antenna designs and heating schemes for Alcator C.** Blackfield, D.T.; Blackwell, B.D. (Massachusetts Inst. of Tech., Cambridge (USA). Plasma Fusion Center). Feb 1983. Contract AC02-78ET51013. 7p. (PFC/CP—83-4; CONF-830210—16). NTIS, PC A02/MF A01. Order Number DE83010246.

From 5. topical conference on radio frequency plasma heating; Madison, WI, USA (21 Feb 1983).

Portions are illegible in microfiche products.

Initially, approximately 500 kW of rf power will be launched through one port of Alcator C at a frequency of 180 to 220 MHz. We use a hot-plasma slab model to examine antenna coupling and power deposition for second harmonic (H, B_0 = 6.7 T) heating regime. The plasma medium is assumed uniform in y and z and is stratified in x. Three-dimensional, four-mode field solutions are obtained by solution of the boundary condition equations in the x direction, and by Fourier transform methods in y and z. We study the dependence of radiation resistance upon coupling parameters such as antenna width and radial position. This is interpreted in terms of the spectral (k/sub y/, k/sub z/) distribution of power, the effect of the evanescent region at the edge, and the attenuation length of the waves.

30894 **(DOE/ET/51013—75) Effect of wall corrugations on lower-hybrid-wave launching and reflection.** Schuss, J.J.; Porkolab, M. (Massachusetts Inst. of Tech., Cambridge (USA). Plasma Fusion Center). Feb 1983. Contract AC02-78ET51013. 7p. (PFC/CP—83-5; CONF-830210—13). NTIS, PC A02/MF A01. Order Number DE83010247.

From 5. topical conference on radio frequency plasma heating; Madison, WI, USA (21 Feb 1983).

The effect of wall corrugations on lower-hybrid-wave launching and reflection is considered and applied to the Alcator C 4.6-GHz RF experiment. A method of treating the effect of wall corrugations on wave launching is outlined. Using this formulism it is shown that placing four wall corrugations on each side of the Alcator C lower-hybrid-waveguide array increases its utility for current drive by better defining its low-n/sub z/ power spectrum. A method of calculating the effect of bellows on the reflection of lower-hybrid waves is also presented. This technique is applied to Alcator C to show that lower-hybrid waves having k/sub ko/ $< 4\ \omega/c$ can have a significant fraction of their RF power shifted to k/sub zo/ $+- 2\pi/d$ upon reflection, where d is the bellows spatial period. Furthermore, the shape of the incident RF power spectrum for k/sub zo/ $< 2\ \omega/c$ is distorted upon reflection. This effect can fundamentally modify wave trajectories that involve wall reflection.

30895 **(DOE/IG—0193) Mirror Fusion Test Facility Project, Lawrence Livermore National Laboratory, Livermore, California.** (USDOE Office of Inspector General, Washington, DC). 22 Apr 1983. 43p. USDOE-TIC, PO Bx 62, Oak Ridge, TN 37830.

Report to The Secretary.

Four areas of concern are addressed. The first concern involves the estimates for completing the project within projected costs and schedule. Although this project has been regularly reviewed by project personnel and others, an independent cost estimate of the project with emphasis on the contingency factor would be desirable to provide assurance of the soundness of the cost and schedule estimates. The second area of concern involves the design criteria being used to protect the main building of the project against earthquakes. Where protection for the project building is less than that afforded nuclear facilities at Livermore and may be inadequate to protect against earthquakes likely to occur in the area. The third area concerns the amount of contingency included in the estimated cost which has risen about 22% of the original estimated project costs. Again, an independent cost estimate could provide assurance on the reasonableness of the contingency factor. Finally, controls over at least $2 million of Government property purchased with project funds were not fully effective. This condition existed because the project followed a Livermore-wide policy of accounting for property that was inconsistent with Department instructions for budgeting, accounting for, and controlling such property. Recommendations to improve each of the matters are discussed. Comments and proposed actions by the Director of Office of Energy Research are appended. (PSB)

30896 **(EUR-CEA-FC—1140) MVA amplifier used for plasma position control in the WEGA tokamak.** Schenk, G. (Association Euratom-CEA, Centre d'Etudes Nucleaires de Grenoble, 38 (France). Dept. de Recherches sur la Fusion Controlee). Feb 1982. 24p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700214.

A new amplifier has been developed for the control of the plasma positron in the WEGA III tokomak acting on the vertical magnetic field. In the high power domain thyristor choppers are usually applied. Unfortunately their response time is quite long and does not yet correspond to the WEGA demand. Therefore transistors have been used to build a fast switching amplifier of the H-bridge type, delivering a power of 1 MVA, by switching 2500 A at 400 V. Because of the duty cycle of the plasma (0,12 s every 240 s) the necessary average power to the amplifier supply is only 500 VA. An intermediate energy storage in an electrolytic capacitor bank is therefore used. As the switching transistors must operate under extreme conditions of voltage and current, precautions must be taken to limit the overvoltage and the overcurrent, to prevent oscillations and to assure power and control equilibrium among the transistors.

30897 **(EUR-CEA-FC—1143) TORE SUPRA: programme of development, qualifying tests. Summary and results.** Aymar, R.; Bareyt, B.; Bon Mardion, G. (Association Euratom-CEA, Centre d'Etudes Nucleaires de Fontenay-aux-Roses, 92 (France). Dept. de Recherches sur la Fusion Controlee). Feb 1982. 84p. NTIS (US Sales Only), PC A05/MF A01. Order Number DE83700215.

TORE SUPRA is a Tokamak under construction in France. It is designed as a useful complement to JET. In this paper, we review the development work and test programme, and summarize its main objectives and conclusions. This concerns first the more conventional parts of the Tokamak (vacuum vessel technology and high power circuit breaker for the poloidal field system) followed by a large amount of work about the superconducting coils.

30898 **(EUR-CEA-FC—1145) Gas recycling studies on the TFR Tokamak.** (Association Euratom-CEA, Centre d'Etudes Nucleaires de Fontenay-aux-Roses, 92 (France). Dept. de Recherches sur la Fusion Controlee). Mar 1982. 19p. (CONF-820545—21). NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700216.

From 5. international conference on plasma surface; Gatlinburg, TN, USA (3 May 1982).

Gas recycling has been studied in a large number of tokamaks for several years. On TFR, a previous experiment with an inconel limiter had shown that, after many discharges in hydrogen, when we change the working gas to deuterium the wall adsorbed isotope accounts for less than 5% after a few shots. In order to have a better knowledge of the gas recycling we have done similar experiments with two different limiters -an inconel limiter and a graphite limiter- at room temperature and with hot walls ($250°C<T<300°$). With the graphite limiter, when the filling gas is changed from 100% H_2 to 100% D_2, the isotopic ratio H/H+D is between 25 and 30% after five shots and reaches the limit for approximately 12% after ten shots. This ratio decreases more rapidly with hot walls but the lower limit is higher: 10 and 20% with inconel and graphite limiters respectively, instead of 5% and 12% at room temperature. The recycling coefficient is a always higher with hot walls; this consequently should reduce the plasma edge temperature. The sputtering and the thermal load on the wall and the limiters might then also decrease.

30899 (GA-A—16979) 60 GHZ transmission system for the Doublet III electron cyclotron heating experiment. Moeller, C.P.; Prater, R.; Lin, S.H. (GA Technologies, Inc., San Diego, CA (USA)). Mar 1983. Contract AT03-76ET51011. 7p. (CONF-830210—9). NTIS, PC A02/MF A01. Order Number DE83010005.

From 5. topical conference on radio frequency plasma heating; Madison, WI, USA (21 Feb 1983).

Portions are illegible in microfiche products.

The transmission and launching scheme being used for the ECH experiments at 60 GHz on Doublet III and its operation at high power is described. The system uses the TE_{01} to TE_{11} mode converter at the antenna. The system provides an acceptable load to the gyrotron, rarely arcs, and maintains good mode purity.

30900 (GA-A—17011) Design of a high-power ICRF experiment for DIII. Rawls, J.M.; Blau, F.; Chiu, S.C.; Freeman, R.L.; Remsen, D. (GA Technologies, Inc., San Diego, CA (USA)). Feb 1983. Contract AT03-76ET51011. 7p. (CONF-830210—11). NTIS, PC A02/MF A01. Order Number DE83009987.

From 5. topical conference on radio frequency plasma heating; Madison, WI, USA (21 Feb 1983).

A synopsis is presented of a proposal to install a 20 MW, 10 second, 55 MHz system on DIII as reconfigured with a large dee-shaped vacuum vessel. The experimental emphasis will be on the achievement of high β, high n tau T conditions via second harmonic heating. The hardware configuration has been chosen with the intent of qualifying ICRF for use in reactor applications.

30901 (GA-A—17026) Preliminary electron-cyclotron-heating results on Doublet III using an outside launch. Prater, R.; Moeller, C.P.; Lin, S.H. (GA Technologies, Inc., San Diego, CA (USA)). Mar 1983. Contract AT03-76ET51011. 6p. (CONF-830210—12). NTIS, PC A02/MF A01. Order Number DE83010196.

From 5. topical conference on radio frequency plasma heating; Madison, WI, USA (21 Feb 1983).

Electron-cyclotron-heating experiments have been carried out on the Doublet III tokamak. Two 60-GHz gyrotrons were used to generate about 255 kW of power delivered to the plasma in the ordinary-mode polarization. The antenna launches a 16° FWHM beam from the large major radius side (outside) of the plasma at a beam center angle of 12° from a major radius. Pulses up to 85 msec long were applied, with the fundamental resonance (21.4 kG) near the plasma center. Plasma current was 300 to 350 kA, and the configuration was mostly expanded boundary with an elongation of 1.4 to 1.6 and density of 2 to 3 x 10^{13} cm^{-3}. Electron-temperature increases up to 1 keV at the plasma center due to ECH are found by Thomson scattering and electron-cyclotron radiation at the second harmonic. Soft x-ray analysis also shows central electron heating and profile broadening when the resonance is moved outside of the plasma center.

30902 (IAE—3413/7) Tokamak-7 device structure. Ivanov, D.P.; Kovalenko, V.D.; Efimov-Ilovajskij, A.V. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1981. 31p. (In Russian). NTIS (US Sales Only), PC A03/MF A01. Order Number DE83700217.

The Tokamak-7 device represents the first tokamak with a superconducting winding of a toroidal magnetic field. The main purpose of the device construction is to gain experience in tokamak design with superconducting windings. Magnetic field on the axis of the system is 3 Tl, maximum field on the winding surface - 5 Tl, maximum plasma current - 400 kA, plasma current field - 0.2 Tl. The device represents a multilayer toroidal construction comprising an internal discharge chamber, internal nitrogen shield, superconducting toroidal field magnetic system, external nitrogen shield and cryostat case. The vortex field and controlling fields windings are located outside the cryostat. The T-7 device by their geometric parameters only slightly differs from the T-10. It is used for fast information buildup in average fields and gives the possibility to discharge T-10 from work under these regimes.

30903 (IAE—3431/7) Dependence of the tokamak chamber sputtering intensity on its cleaning technique. Vertiporokh, A.N.; Gegechkori, N.M.; Esipchuk, Yu.V.; Kovrov, P.E.; Maksimov, Yu.S.; Notkin, G.E.; Pimenov, A.B.; Razumova, K.A.; Rantsev-Kartinov, V.A.; Chicherov, V.M. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1981. 12p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700218.

Investigations of effective charge and impurity composition of plasma under various methods of T-10 tokamak walls cleaning and discharge formation conditions are carried out. The concentration of metallic impurities has been measured on absolute intensity of K-lines of proper elements while the concentration of light impurities-on intensity exceeding of the measured x radiation continuum in the 2.5-5 keV energy range above the one expected in hydrogen plasma. The following conclusions are drawn: To obtain a reliably reproducible regime with low values of stability margin the heavy impurity concentration must not exceed one hundredth percent. The limited inlet of light impurities gives the possibility to form profiles of current density distribution on the plasma filament periphery which correspond to the low level of MHD activity. Sputtering intensity depends on state of the wall- it is lower in the case when the wall is covered with oxides, on the width of a behind diaphragm region a sharp decrease of metal concentration at the diaphragm "shadow" increase above the threshold, on plasma parameters in the near wall region which can be affected by blowing down neutral gas in the discharge process. A great energy strength on graphite diaphragm leads to its strong sputtering.

30904 (IAE—3433/6) Compression of the thermonuclear fuel targets by charged particle beams. Part 2. Gurevich, A.I. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1981. 32p. (In Russian). NTIS (US Sales Only), PC A03/MF A01. Order Number DE83700219.

The process of irradiation of targets consisting of DT-mixture covered with a gold shell, by electron and ion beams is analytically investigated. The DT-mixture is compressed for account of thermal shell expansion, warms up and the DT-reaction occurs in it with energy release. Main attention in the study is given to qualitative and semiquantitative consideration of these phenomena: Plane (unit square layer limited on the DT-mixture side by an impenentrable wall), cylindrical (unit height cylinder) and spherically-symmetric targets. Analytical formulas of calculation of energy DT-reaction yield depending on irradiation conditions are derived. The comparison of results of calculations by formulas with the computer numerical solution of hydrodynamics equations has shown that formulas satisfactorily described the processes under consideration. The reason of better efficiency of target irradiation by protons and generally by ions than electrons is discussed. The conclusion is drawn that at target irradiation by ions a considerably greater part of kinetic energy of internal layers of the shell transfers into the DT-mixture internal energy and DT-mixture compression is closer to the adiabatic one, than at electron irradiation.

30905 (JAERI-M—9599) Countermeasure for unneutralized ion beam in JT-60 NBI against the leakage magnetic field from JT-60. Matsuoka, M.; Itoh, T.; Horiike, H.; Matsuda, S.; Tanaka, S. (Japan Atomic Energy Research Inst., Tokyo). Aug 1981. 26p. (In Japanese). NTIS (US Sales Only), PC A03/MF A01. Order Number DE83701516.

Unneutralized ion beam in JT-60 neutral beam injector will be magnetically bent by the reflecting magnet and will impinge on the surface of the water jacket protecting the magnet and on the surface of the beam dump. When the JT-60 Tokamak operates, leakage magnetic field generated by the poloidal currents will be superposed on the above magnetic field. As a result, the trajectory of the ion beam will be displaced and the heat loading of the water jacket and the beam dump will exceed a permissible level unless careful attention is paid to the magnetic field design. As one of the countermeasures against the leakage field, we first considered the magnetic shielding. After the numerical and experimental study, however, it was found difficult to obtain the satisfactory shielding factor due to lack of space. As another countermeasure, the cancel-

lation of magnetic field by a set of additional coils (Cancellation Coils) was proposed and studied. the result showed that the cancellation was effective to reduce the leakage field to a sufficiently low value. Therefore we decided to adopt it in the JT-60 NBI design.

30906 **(KMSF-U—1263) Laser fusion. Quarterly progress report, Aporil-June 1982.** (KMS Fusion, Inc., Ann Arbor, MI (USA)). 1982. Contract AC08-82DP40152. 37p. NTIS, PC A03/MF A01. Order Number DE83010807.

We continued to make progress toward understanding the solidification of cryogenic fuel layers in glass Microshell targets. The cryogenic target series, intended to produce high density implosions, continued this quarter with the use of 0.53 μm laser light. The thermal transport experimental campaign was successfully concluded using 1.05 μm laser irradiation. Results were obtained over a decade of absorbed laser intensities. This extended the range of previously reported data taken at lower intensities. K/sub alpha/ x-ray signals from Titanium and Vanadium inner layers were used to measure suprathermal electron transport. Good signals were obtained only at the highest laser intensities and for the thinnest layers of absorbing material.

30907 **(LA-UR—83-586) Convective transport in laser target plasmas.** Brackbill, J.U.; Colombant, D.; Grandjouan, N. (Los Alamos National Lab., NM (USA); Naval Research Lab., Washington, DC (USA); Ecole Polytechnique, 91 - Palaiseau (France)). 1982. Contract W-7405-ENG-36. 17p. (CONF-8209113—3). NTIS, PC A02/MF A01. Order Number DE83009939.

From CECAM workshop; Paris, France (13 Sep 1982).

Portions are illegible in microfiche products.

The role of guiding-center corrections in convective transport of electron energy is examined with a simple numerical model. At 10^{16}W cm^{-3} with a 60-μm spot and a 10.6-μm wavelength laser, the Righi-Leduc term is observed to have little effect on transport in a calculation with the thermal flux limited to the free-streaming value.

30908 **(LA-UR—83-691) Tritium monitoring within the reactor hall of a DT fusion reactor.** Jalbert, R.A. (Los Alamos National Lab., NM (USA)). 1983. Contract W-7405-ENG-36. 5p. (CONF-830406—14). NTIS, PC A02/MF A01. Order Number DE83009978.

From 5. topical meeting on technology of fusion energy; Knoxville, TN, USA (26 Apr 1983).

Monitoring the reactor hall atmosphere of DT-fueled fusion reactors will probably be performed with conventional ion chamber and proportional counter instruments modified as necessry to deal with the background radiation. Background includes external neutron and gamma radiation and internal beta-gamma radiation from the activated atmosphere. Although locating instruments in remote areas of the reactor hall and adding local shielding and electronic compensation may be feasible, placing the instruments in accessible low-background areas outside of the reactor hall and doing remote sampling is preferable and solves most of the radiation problems. The remaining problem of the activated atmosphere may be solved by recently developed instruments in conjunction with the use of semi-permeable membranes currently under development and evaluation.

30909 **(LA-UR—83-716) Assembly and installation of the 2 MeV FMIT accelerator.** Liska, D.; Michelotti, R. (Los Alamos National Lab., NM (USA)). 1983. Contract W-7405-ENG-36. 4p. (CONF-830311—80). NTIS, PC A02/MF A01. Order Number DE83009959.

From Particle accelerator conference; Santa Fe, NM, USA (21 Mar 1983).

The front end of the 35-MeV Fusion Materials Irradiation Test (FMIT) Facility accelerator is being assembled and installed at Los Alamos. The machine ultimately will produce a 500-kW continuous-duty beam at 5 MeV, although only the first 2 MeV will be installed this year. The 2-MeV system will include the most-powerful radio-frequency quadrupole (RFQ) in existence. The assembly and installation of the hardware are described, along with the unique problems arising from the large size and high power of the components involved.

30910 **(LA-UR—83-817) Structural-design considerations for the FED 50-kA equilibrium field coils.** Buchanan, G.; Bennett, J.G. (Los Alamos National Lab., NM (USA)). 1983. Contract W-7405-ENG-36. 6p. (CONF-830406—20). NTIS, PC A02/MF A01. Order Number DE83009998.

From 5. topical meeting on technology of fusion energy; Knoxville, TN, USA (26 Apr 1983).

Portions are illegible in microfiche products.

The structural support system for two equilibrium field coil conductor concepts is considered for the fusion energy design (FED) 8/10T baseline magnetic-fusion system. Both conductor concepts are discussed. Results indicate that regardless of the conductor concept employed, an external support beam/frame structural system is required to equilibrate the accumulative loadings.

30911 **(LA-UR—83-930) Compact fusion reactors.** Krakowski, R.A.; Hagenson, R.L. (Los Alamos National Lab., NM (USA); Technology International, Inc., Ames, IA (USA)). 1983. Contract W-7405-ENG-36. 12p. (CONF-830406—13). NTIS, PC A02/MF A01. Order Number DE83009898.

From 5. topical meeting on technology of fusion energy; Knoxville, TN, USA (26 Apr 1983).

Portions are illegible in microfiche products.

Compact, high-power-density approaches to fusion power are proposed to improve economic viability through the use of less-advanced technology in systems of considerably reduced scale. The rationale for and the means by which these systems can be achieved are discussed, as are unique technological problems.

30912 **(LA-UR—83-931) Modular stellarator reactor conceptual design study.** Miller, R.L.; Krakowski, R.A.; Bathke, C.G. (Los Alamos National Lab., NM (USA); Westinghouse Electric Corp., Madison, PA (USA); Stone and Webster Engineering Corp., Boston, MA (USA)). 1983. Contract W-7405-ENG-36. 7p. (CONF-830406—11). NTIS, PC A02/MF A01. Order Number DE83009899.

From 5. topical meeting on technology of fusion energy; Knoxville, TN, USA (26 Apr 1983).

A conceptual design study of the Modular Stellarator Reactor is summarized. The physics basis of the approach is elucidated with emphasis on magnetics performance optimization. Key engineering features of the fusion power core are described. Comparisons with an analogous continuous-helical-coil (torsatron) system are made as the basis of a technical and economic assessment.

30913 **(LA-UR—83-952) ANTHEM: a two-dimensional multicomponent self-consistent hydro-electron transport code for laser-matter interaction studies.** Mason, R.J. (Los Alamos National Lab., NM (USA)). 1982. Contract W-7405-ENG-36. 16p. (CONF-8210137—1). NTIS, PC A02/MF A01. Order Number DE83009904.

From CECAM workshop on the flux-limiter and heat flow instabilities; Orsay, France (1 Oct 1982).

Portions are illegible in microfiche products.

The ANTHEM code for the study of CO_2-laser-generated transport is outlined. ANTHEM treats the background plasma as coupled Eulerian thermal and ion fluids, and the suprathermal electrons as either a third fluid or a body of evolving collisional PIC particles. The electrons scatter off the ions; the suprathermals drag against the thermal background. Self-consistent E- and B-fields are computed by the Implicit Moment Method. The current status of the code is described. Typical output from ANTHEM is discussed with special application to Augmented-Return-Current CO_2-laser-driven targets.

30914 **(LA-UR—83-968) Development of the two-dimensional cross-section sensitivity and uncertainty analysis code SENSIT-2D with applications to the FED.** Embrechts, M.J.; Dudziak, D.J.; Urban, W.T. (Los Alamos National Lab., NM (USA)). 1983. Contract W-7405-ENG-36. 9p. (CONF-830406—18). NTIS, PC A02/MF A01. Order Number DE83009910.

From 5. topical meeting on technology of fusion energy; Knoxville, TN, USA (26 Apr 1983).

Portions are illegible in microfiche products.

Sensitivity and uncertainty analyses implement the information obtained from a transport code by providing a reasonable estimate for the uncertainty of a particular design parameter and a better understanding of the nucleonics involved. The toroidal geometry of many fusion devices motivates a two-dimensional calculation capability. A two-dimensional cross-section and secondary energy distribution (SED) sensitivity and uncertainty analysis code, SENSIT-2D, has been developed that allows modeling of a toroidal geometry. Two-dimensional and one-dimensional sensitivity analyses for the heating and the copper d.p.a. of the TF coil for a conceptual FED blanket/shield design were performed. The uncertainties from the two-dimensional analysis are of the same order of magnitude as those obtained from the one-dimensional study. The largest uncertainties were caused by the cross-section covariances for chromium.

30915 **(LA-UR—83973) Status of tritium technology development for magnetic-fusion energy.** Anderson, J.L. (Los Alamos National Lab., NM (USA)). 1983. Contract W-7405-ENG-36. 9p. (CONF-830406—19). NTIS, PC A02/MF A01. Order Number DE83009911.

From 5. topical meeting on technology of fusion energy; Knoxville, TN, USA (26 Apr 1983).

The development of tritium technology for the magnetic fusion energy program has progressed at a rapid rate over the past two years. The focal points for this development in the United States have been the Tritium Systems Test Assembly at Los Alamos and the FED/INTOR studies supported by the Fusion Engineering Design Center at Oak Ridge. In Canada the Canadian Fusion Fuel Technology Project has been initiated and promises to make significant contributions to the tritium technology program in the next few years. The Japanese government has now approved funding for the Tritium Processing Laboratory at the Japan Atomic Energy Research Institute's Tokai Research Establishment. Construction on this new facility is scheduled to begin in April 1983. This facility will be the center for fusion tritium technology development in Japan. The European Community is currently working on the design of the tritium facility for the Joint European Torus. There is considerable interaction between all of these programs, thus accelerating the overall development of this crucial technology.

30916 **(MPQ—64) ICF-target studies for heavy ion fusion.** Meyer-ter-Vehn, J. (Max-Planck-Institut fuer Quantenoptik, Garching (Germany, F.R.)). Jul 1982. 31p. Available from Max-Planck-Institut fuer Quantenoptik, Garching (Germany, F.R.).

From Symposium on accelerator aspects of heavy ion fusion; Darmstadt (Germany, F.R.) (29 Mar - 2 Apr 1982).

In this talk, work on ICF targets for Heavy Ion Fusion (HIF) performed at the Max-Planck-Institut for Quantum Optics (MPQ) at Garching in the period 1979-1982 is presented. It is part of the German feasibility study of inertial confinement fusion (ICF) by means of heavy ions beams. Within this project target aspects are also studied at the Kernforschungszentrum Karlsruhe with emphasis on thermonuclear burn and transport in a reactor cavity and at the universities in Frankfurt and Darmstadt with focus on symmetry aspects and more-dimensional simulation.

30917 **(NIIEFA-P-B—0510) To the calculation of the mutual inductance coefficient in a toroidal-sector magnet system.** Mingalev, B.S. (Nauchno-Issledovatel'skij Inst. Ehlektrofizicheskoj Apparatury, Leningrad (USSR)). 1981. 35p. (In Russian). NTIS (US Sales Only), PC A03/MF A01. Order Number DE83700222.

The analytical method of calculation characteristics of the magnet system consisting of several toroidal-sector coils and ferromagnetic body limited by cylindrical surfaces is proposed. The particular case of such system is realized as a component of a toroidal magnet system of the tokamak type device. As examples analytical formulas for calculation of the following values: a force effecting on the magnet coil, coefficient of self induction and mutual induction of magnet coils, are presented. Specific numerical calculations of the above values are presented too.

30918 **(ORNL/CSD/TM—199) User's guide to FFE: a fast front end data acquisition program.** Million, D.L. (Oak Ridge National Lab., TN (USA)). Mar 1983. Contract W-7405-ENG-26. 22p. NTIS, PC A02/MF A01. Order Number DE83010405.

The Large Coil Test Facility project of Fusion Energy Division has a data acquisition system which includes a large host computer and several small, peripheral front-end computers. The front-end processors handle details of data acquisition under the control of the host and pass data back to the host for storage. Some of the front ends are known as fast front ends and are required to collect a maximum of 64,000 samples each second. This speed and other hardware constraints resulted in a need for a stand-alone, assembly language task which could be downline loaded from the host system into the fast front ends. FFE (Fast Front End) was written to satisfy this need. it was written in the PDP11 MACRO-11 assembly language for an LSI-11/23 processor. After the host loads the task into the front end, it controls the data acquisition process with a series of commands and parameters. This User's Guide describes FFE and how to use it from the host system. A companion Programmer's Guide provides more detailed information on the structure of the program.

30919 **(ORNL/FEDC—82/2) FED baseline engineering studies report.** Sager, P.H. (Oak Ridge National Lab., TN (USA)). Apr 1983. Contract W-7405-ENG-26. 472p. NTIS, PC A20/MF A01. Order Number DE83010328.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

Studies were carried out on the FED Baseline to improve design definition, establish feasibility, and reduce cost. Emphasis was placed on cost reduction, but significant feasibility concerns existed in several areas, and better design definition was required to establish feasibility and provide a better basis for cost estimates. Design definition and feasibility studies included the development of a labyrinth shield ring concept to prevent radiation streaming between the torus spool and the TF coil cryostat. The labyrinth shield concept which was developed reduced radiation streaming sufficiently to permit contact maintenance of the inboard EF coils. Various concepts of preventing arcing between adjacent shield sectors were also explored. It was concluded that installation of copper straps with molybdenum thermal radiation shields would provide the most reliable means of preventing arcing. Other design studies included torus spool electrical/structural concepts, test module shielding, torus seismic response, poloidal conditions in the magnets, disruption characteristics, and eddy current effects. These additional studies had no significant impact on cost but did confirm the feasibility of the basic FED Baseline concept.

30920 **(ORNL/SUB—79-33200/12) Development program for a 200-kW, c-w gyrotron. Quarterly report No. 12, April-June 1982.** DeHope, W.J.; Caplan, M.; Ferguson, P.E.; Matranga, V.A.; Sandoval, J.J.; Tancredi, J.J. (Hughes Aircraft Co., Torrance, CA (USA). Electron Dynamics Div.). 1982. Contract W-7405-ENG-26. 34p. NTIS, PC A03/MF A01. Order Number DE83010911.

Portions are illegible in microfiche products.

The objective of this program is the design and development of a millimeter-wave device to produce 200 kW of continuous-wave power at 60 GHz. The device, a gyrotron oscillator, will be compatible with power delivery to an electron-cyclotron-heated plasma. During this report period, extensive low-duty testing on the 20-μs modulator was performed, achieving 285 kW at 44% beam efficiency. The beam instability that plagued S/N 1 and resulted in excessive mod-anode interception current was circumvented with a smaller beam hole in the end of the lossy drift tube between cathode and cavity, and by operating the tube with a positively tapered magnetic field over the cathode. A new design optimization of the magnetron-injection gun was completed for use in the tapered magnetic field. Work on the collector was also accomplished including a study of the beam distribution using several defferent diagnostic techniques, a redesign of the ceramic insulating seals, and a full-scale mock-up of the c-w collector for mechanical integrity under high flow rates. Preliminary testing of S/N 2 was begun. Progress on the c-w facility continued.

30921 (ORNL/SUB—79-33200/13) Development program for a 200-kW, c-w gyrotron. Quarterly report No. 13, July-September 1982. Ferguson, P.E.; DeHope, W.J.; Matranga, V.A.; Sandoval, J.J.; Schmitt, M.J.; Tancredi, J.J. (Hughes Aircraft Co., Torrance, CA (USA). Electron Dynamics Div.). 1982. Contract W-7405-ENG-26. 28p. NTIS, PC A03/MF A01. Order Number DE83010912.

The objective of this program is the design and development of a millimeter-wave device to produce 200 kW of continuous wave power at 60 GHz. Testing continued on gyrotron S/N 1A and S/N 2 during this report period. S/N 1A attained a peak power level of 285 kW under short pulse conditions. Long pulse measurements up to 100 ms were attempted with the tube detuned for minimum output power. A problem with the RF water load limits the maximum power level at which the tube will operate. S/N 2 was tested with pulse widths up to 15 μs. This tube appears to have a limited operating region, and the cause of this limitation is being investigated. A mock-up of the collector cooling scheme for the CW gyrotron was constructed in order to determine the integrity of the thin fins. A flow of 345 gpm (limited by the source) was obtained with a reasonable pressure drop of 60 psi. This assembly operated for one hour with no apparent damage. A new, broader band window for use on CW gyrotrons has been designed and fabrication has started. Progress was made on the Gyrotron CW test facility.

30922 (ORNL/TM—8616) New algorithm for computing the ablation of hydrogenic pellets in hot plasmas. Milora, S.L. (Oak Ridge National Lab., TN (USA)). Apr 1983. Contract W-7405-ENG-26. 28p. NTIS, PC A03/MF A01. Order Number DE83010447.

A method is presented for calculating the evaporation rate of hydrogenic pellets immersed in an unmagnetized plasma with a suprathermal particle component of arbitrary distribution function. The computational procedure is based on hydrodynamic solutions for the expansion of the gaseous cloud, obtained in a previous treatment that considered the effects of thermal particles only. The appropriate heat source terms, derived from the stopping power of the gaseous shield, are worked out for energetic ions produced by neutral beam injection heating. The model predicts 27-cm penetration in a Poloidal Divertor Experiment (PDX) plasma, compared with experimentally measured values in the range of 29 to 32 cm. An application to the Tokamak Fusion Test Reactor (TFTR) gives an estimated 21-cm penetration for a 2.5-mm-diam tritium pellet injection at 2000 m/s into a 55-cm-bore plasma heated to a central electron temperature of 4 keV by 34 MW of neutral injection.

30923 (PPPL—1987) Particle and energy transport in the plasma scrape-off zone and its impact on limiter design. Ulrickson, M.; Post, D.E. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Mar 1983. Contract AC02-76CH03073. 16p. NTIS, PC A02/MF A01. Order Number DE83010845.

The design of limiters for fusion devices depends critically on the transport properties of the plasma edge. Recent data from Langmuir Probe experiments and calorimeter probe experiments on the Poloidal Divertor Experiment (PDX) have provided information about the transport of particles and energy in the edge region of a plasma. These data have been used as input to a simple one-dimensional model in which the particle and thermal diffusion coefficients are permitted to be functions of the density and temperature. The transport coefficients deduced from the data are then applied to the cases of the TFTR device and a device like FED/INTOR to predict the optimum design for limiters or pump limiters. The results indicate the optimum limiter should have a concave shape when viewed from the plasma. The effect of the uncertainties in the deduced coefficients on the optimum design performance are also discussed.

30924 (PPPL—1998) Closed expressions for the magnetic field of toroidal multipole configurations. Sheffield, G.V. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Apr 1983. Contract AC02-76CH03073. 16p. NTIS, PC A02/MF A01. Order Number DE83010839.

Closed analytic expressions for the vector potential and the magnetic field for the lower order toroidal multipoles are presented. These expressions can be applied in the study of tokamak plasma cross section shaping. An example of such an application is included. These expressions also allow the vacuum fields required for plasma equilibrium to be specified in a general form independent of a particular coil configuration.

30925 (SAND—83-0168) Analytic scaling laws related to beam and return-current stability in particle-beam-driven ICF target regions. Swegle, J.A. (Sandia National Labs., Albuquerque, NM (USA)). Mar 1983. Contract AC04-76DP00789. 65p. NTIS, PC A04/MF A01. Order Number DE83010181.

Using a simplified model of a homogeneous, unbounded, time-independent background plasma and an unbounded, charge- and current-neutralized ion beam, the linear stability of beam- and return-current-driven modes has been analyzed in parameter regimes appropriate to both light- and heavy-ion-driven inertial-confinement-fusion target regions. The purpose of this report is to derive analytic scaling laws which reveal those regions in parameter space and those modes of interaction, both electrostatic and electromagnetic, which could present problems. It is found that instabilities are typically not a concern until the density of background ions drops below about 0.01% of solid density. Growth rates are presented, and the stabilizing influences of beam overlap and plasma-density gradients are discussed quantitatively and qualitatively.

30926 (UCID—19739) Electrical energy and cost for the Mirror Fusion Test Facility. Pence, G.A. (Lawrence Livermore National Lab., CA (USA)). Feb 1983. Contract W-7405-ENG-48. 57p. NTIS, PC A04/MF A01. Order Number DE83010982.

An operational scenario for the Mirror Fusion Test Facility has been developed based on System Requirements, experience with existing systems, and discussions with project engineers and designers who are responsible for the systems. This scenario was used to project the electrical energy required for the facility. Each system is listed showing the equipment that has been considered, the amount of power requested, and in most cases, the power that it is now connected.

30927 (UCID—19743) Options to upgrade the Mirror Fusion Test Facility. Thomassen, K.I.; Doggett, J.N. (eds.). (Lawrence Livermore National Lab., CA (USA)). Apr 1983. Contract W-7405-ENG-48. 182p. NTIS, PC A09/MF A01. Order Number DE83009696.

Portions are illegible in microfiche products.

In this document we describe three options for upgrading MFTF-B, and the nomenclature used for these options is shown on the chart, MFTF-B Upgrade Options. We propose to add a 4-m-long reactor-like insert to the central cell, or to change the end plugs to the new MARS-type configuration, or both. LLNL prefers the third option, labeled MFTF-α^+T in the chart, in which both the central cell insert is added and the end plugs are modified. All options are long-pulse or steady-state DT burning experiments. Those upgrades with the insert would be constructed beginning in FY 86, with operation beginning in mid-FY 92. Confirmation of our intent to modify the end plugs would be sought in FY 88 based on positive results from MFTF-B experiments. The upgrade with only the end plug modification would not start until MFTF-B data are available. The timeline for constructing and operating the MFTF-B Upgrade included at the end of this preface is for reference while reading the text. The various modes of operation shown on the chart are described later.

30928 (UCRL—53356) Electromagnetic pumping of liquid lithium in inertial confinement fusion reactors. Baker, R.S.; Blink, J.A.; Tessier, M.J. (Lawrence Livermore National Lab., CA (USA)). 1 Mar 1983. 39p. NTIS, PC A03/MF A01. Order Number DE83010359.

The basic operating principles and geometries of ten electromagnetic pumps are described. Two candidate pumps, the annular-linear-induction pump and the helical-rotor electromagnetic pump, are compared for possible use in a full-scale liquid-lithium inertial confinement fusion reactor. A parametric design study completed for the helical-rotor pump is shown to be valid when applied to an

experimental sodium pump. Based upon the preliminary HYLIFE requirements for a lithium flow rate per pump of 8.08 m^3/s at a head of 82.5 kPa, a complete set of 70 variables are specified for a helical-rotor pump with either a normally conducting or a superconducting winding. The two alternative designs are expected to perform with efficiencies of 50 and 60%, respectively.

30929 **(UCRL—88056) Scaling of laser-plasma interactions with laser wavelength and plasma size.** Max, C.E.; Campbell, E.M.; Mead, W.C.; Kruer, W.L.; Phillion, D.W.; Turner, R.E.; Lasinski, B.F.; Estabrook, K.G. (Lawrence Livermore National Lab., CA (USA)). 25 Jan 1983. Contract W-7405-ENG-48. 21p. (CONF-821089—9). NTIS, PC A02/MF A01. Order Number DE83010103.

From 6. international workshop on laser interaction and related plasma phenomena; Monterey, CA, USA (25 Oct 1982).

Portions are illegible in microfiche products.

Plasma size is an important parameter in wavelength-scaling experiments because it determines both the threshold and potential gain for a variety of laser-plasma instabilities. Most experiments to date have of necessity produced relatively small plasmas, due to laser energy and pulse-length limitations. We have discussed in detail three recent Livermore experiments which had large enough plasmas that some instability thresholds were exceeded or approached. Our evidence for Raman scatter, filamentation, and the two-plasmon decay instability needs to be confirmed in experiments which measure several instability signatures simultaneously, and which produce more quantitative information about the local density and temperature profiles than we have today.

30930 **(UCRL—88208) CASCADE: a centrifugal-action solid-breeder reaction chamber.** Pitts, J.H. (Lawrence Livermore National Lab., CA (USA)). 1983. Contract W-7405-ENG-48. 16p. (CONF-830406—21). NTIS, PC A02/MF A01. Order Number DE83010612.

From 5. topical meeting on technology of fusion energy; Knoxville, TN, USA (26 Apr 1983).

The Cascade concept uses the high-temperature (1200 K) potential of a solid Li_2O pebble blanket in conjunction with centrifugal action to produce a safe and highly efficient (up to 55%) reaction chamber for commercial power production. One option using a 25-mm-thick steel wall is shown to have low primary stresses of 22 MPa, which when coupled with a secondary thermal stress of 132 MPa, satisfies the intent and methodology for an ASME-designed vessel. A high tritium breeding ratio of 1.35 results from direct exposure of the Li_2O blanket to the fusion reactions. Vacuum pumping requirements of the chamber, using laser drivers at a pressure of 0.1 Torr, are a modest 4.7 m^3/s for D-T and 3.1 m^3/s for helium. Carbon-14 activation in the blanket is insignificant. We conclude that the Cascade concept offers an attractive option for a safe and efficient inertial fusion reaction chamber.

30931 **(UCRL—88527) Tandem mirrors for neutron production.** Doggett, J.N. (Lawrence Livermore National Lab., CA (USA)). 31 Mar 1983. Contract W-7405-ENG-48. 12p. (CONF-830406—16). NTIS, PC A02/MF A01. Order Number DE83009846.

From 5. topical meeting on technology of fusion energy; Knoxville, TN, USA (26 Apr 1983).

Portions are illegible in microfiche products.

Two mirror machine concepts are being studied as early-time, low-cost, neutron-producing devices for testing and demonstrating reactor-relevant fusion technology. The first of these concepts is for a new, small, driven, steady-state, D-T reactor, called the Technology Demonstration Facility (TDF). The second concept is for upgrades to the MFTF-B machine that burn tritium and run for pulse lengths of some hours. Both devices operate in the Kelley mode in order to provide high-wall loadings of 14-MeV neutrons, thereby providing a valuable test bed for reactor-relevant hardware and subsystems. Either one of these devices could be running in the early 1990's with first wall fluxes between 1.4 and 2.0 $MW\ m^{-2}$.

30932 **(UCRL—88977) Overview and direction in the tandem mirror program.** Thomassen, K.I. (Lawrence Livermore National Lab., CA (USA)). Apr 1983. Contract W-7405-ENG-48. 13p. (CONF-830406—17). NTIS, PC A02/MF A01. Order Number DE83010257.

From 5. topical meeting on technology of fusion energy; Knoxville, TN, USA (26 Apr 1983).

Portions are illegible in microfiche products.

There are two main thrusts to the tandem mirror program at the present time. One is to gather the experimental data base to verify the axicell thermal-barrier concept and the other to improve the end plugs for tandems. With such improvements one might approach the ideal fusion reactor, a simple solenoid of modular elements whose ends are but a modest perturbation on the configuration from both a cost and technological viewpoint. Progress toward these two goals is discussed here, and the directions to be taken in the immediate future are described.

30933 **(UCRL-Trans—11827) Study and use of the ion beams formed in the Focus experiment.** Bernard, A.; Garconnet, J.P.; Jolas, A.; le Breton, J.P.; de Mascureau, J. (CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France)). Mar 1983. Contract W-7405-ENG-48. C; CEA-R-5171. 48p. NTIS, PC A03/MF A01. Order Number DE83008903.

Portions are illegible in microfiche products.

Studies were performed in the 200 kJ Actime installation using CD_2 or LiD targets and permitted one to determine the characteristics of the ion beam which bombards the target. The measurement of the temperature attained by metal targets bombarded by deuterons is discussed. The use of a digital program permits one to calculate the amount of energy deposited. Finally, the improvements being considered and the future prospects offered by this type of experiment are discussed.

30934 **Light-atom neutral beams for tandem mirror end plugs.** Post, D.E.; Grisham, L.R. (Princeton Univ., NJ (USA). Plasma Physics Lab.); Santarius, J.F.; Emmert, G.A. (Wisconsin Univ., Madison (USA)). *Nuclear Fusion;* **23**: No. 1, 3-13(Jan 1983).

Paper copy only, copy does not permit microfiche production6 refs.

The advantages and feasibility of neutral beams with $Z >= 3$ formed from negative ions, accelerated to 0.5-1.0 $MeV.amu^{-1}$, and neutralized, are investigated for use in tandem mirror reactor end plugs. A reactor plasma physics design incorporating these beams has been done with the result that such a reactor could produce Q's (ratio of fusion power to injected power) of 20-30. These beams thus might be a replacement for the currently proposed 200-500-keV neutral proton beams presently planned for tandem mirror reactors. Thus these $Z >= 3$ neutral beams could increase the potential attractiveness of tandem mirror reactors by offering a possible substitute for difficult high-energy neutral-hydrogen end plug beams.

30935 **Effects of neutral-beam co- and counter-injection on impurity radiation from ISX-B plasmas.** Bush, C.E.; Bates, S.C.; Dunlap, J.L.; Lazarus, E.A.; Murakami, M.; Pare, V.K.; Thomas, C.E.; Thomas, B. Jr.; Wieland, R.M. (Oak Ridge National Lab., TN (USA)). *Nuclear Fusion;* **23**: No. 1, 67-73(Jan 1983).

In addition to heating, neutral beam injection modifies the impurity transport in ISX-B plasmas. Radiometric data show the effects of co- and counter-injection on impurity radiation profiles to be significantly different. Data from an array of twelve collimated detectors and an uncollimated monitor (all pyroelectric) show the radial distribution of volume impurity emission to be peaked at the centre of the discharge with counter-injection and at the plasma edge with co-injection, especially for Psub(inj) > 1 MW. At high co-injection power, only 20% of the total input power is lost as impurity radiation. Also, co-injection-heated discharges reach an equilibrium shortly after beam turn-on, whereas counter-injection-heated discharges do not reach equilibrium and usually terminate disruptively. It is conjectured that the disruption is due to modification of the plasma current distribution resulting from the extreme cooling at the plasma core.

30936 **Plasma physics and controlled nuclear fusion research. Summaries of the ninth IAEA international conference held in Baltimore, USA, 1-8 September 1982.** Furth, H.P. (Princeton Univ., NJ (USA). Plasma Physics Lab.); Kadomtsev, B.B. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii); Yamanaka, C. (Osaka Univ. (Japan)); Lomer, W.M. (UKAEA Culham Lab., Abingdon). *Nuclear Fusion;* **23**: No. 1, 97-120(Jan 1983).

Papers dealing with the following topics were presented: magnetic confinement experiments (tokamak devices, tandem mirror machines, stellarators, elmo bumpy tori, reverse-field pinches, and compact tori); magnetic confinement theory (plasma instabilities, plasma heating, and high-β systems); inertial confinement fusion (laser and particle-beam drivers, targets concepts, and implosion mechanisms); reactor systems (tokamak reactors and alternative systems).

30937 **Stabilization of axisymmetric mirror plasmas by energetic ion injection.** Hinton, F.L.; Rosenbluth, M.N. (Texas Univ., Austin (USA). Inst. for Fusion Studies). *Nuclear Fusion;* **22**: No. 12, 1547-1557(Dec 1982).

Plasmas in axisymmetric mirror devices can be made stable to MHD interchange modes by injecting energetic ions which contribute significantly to the pressure and spend a sufficiently large fraction of a bounce time in regions of favourable curvature. Pitch-angle scattering adversely affects the method by reducing this fraction. The ions must be sufficiently energetic that pitch-angle scattering is not detrimental for that part of a slowing-down time during which they contribute significantly to the pressure. The authors have solved the bounce-averaged Fokker-Planck equation, including drag and pitch-angle scattering, and calculated the energetic ion contribution to the stability integral. With specially tailored magnetic fields, the required injection energy and power drain are found to be reasonable.

30938 **Impurity injection experiments on the Alcator C tokamak.** Marmar, E.S.; Rice, J.E.; Terry, J.L. (Massachusetts Inst. of Tech., Cambridge (USA). Plasma Fusion Center); Seguin, F.H. (American Science and Engineering, Inc., Cambridge, MA). *Nuclear Fusion;* **22**: No. 12, 1567-1575(Dec 1982).

Transport of trace, non-recycling, injected impurities has been studied on the Alcator C tokamak. Changes of impurity confinement times with varying plasma density, current, toroidal field, majority ion species mass, impurity charge and mass, Zsub(eff), and major and minor radius have been delineated. An empirical scaling is developed from these results and compared with the results of similar transport studies undertaken on other tokamak devices. The agreement is reasonable. A computer model simulating the transport is utilized to compare several models with the empirical results. With the possible exception of low-density, high-Zsub(eff) discharges, the transport is not consistent with the predictions of neoclassical theory, but can be well described by simple spreading diffusion with a diffusion coefficient ranging from 1 to 5×10^3 $cm^2.s^{-1}$, depending on plasma parameters. This model yields good agreement both with the time histories of single-chord measurements of various ionization states, and with radial soft-X-ray emission profiles. Increased impurity transport with the onset of strong MHD oscillations has also been observed, with the effective diffusion coefficient scaling approximately as $(\Delta B)^4$.

30939 **Experimental determination of vertical instability strength in PDX tokamak.** Takahashi, H.; Bol, K.; Okabayashi, M.; Reusch, M. (Princeton Univ., NJ (USA). Plasma Physics Lab.); Maeda, H. (Japan Atomic Energy Research Inst., Tokai, Ibaraki. Tokai Research Establishment). *Nuclear Fusion;* **22**: No. 12, 1597-1612(Dec 1982).

The instability strength of a diverted plasma with vertical elongation is measured for a range of the magnetic-field decay index, $-1.5 < n < +0.5$, in the standard-D and inverted-D configurations. The range of the instability growth time is from one to four orders of magnitude greater than previously published results. When the plasma current is in the range of 170-310 kA, the instability can be suppressed by passive stabilization due to currents induced in a discrete coil system together with a moderate-power (100 kW) active feedback system. The inverted-D configuration is three times more unstable than the standard-D configuration for the same ellipticity. The inverted-D configuration is destabilized by its negative triangularity and the standard-D is stabilized by its positive triangularity.

30940 **Viscoresistive ballooning and density fluctuations in the ZT-40 device.** Dagazian, R.Y.; Paris, R.B. (Los Alamos National Lab., NM (USA)). *Nuclear Fusion;* **22**: No. 12, 1670-1674(Dec 1982).

Letter-to-the-editor.

Resistive ballooning subject to the effects of viscosity is put forward as a possible explanation for some of the observed density fluctuations in the ZT-40 device at Los Alamos.

30941 **8-Channel interferometer for the measurement of electron density profiles in a Tokamak plasma.** Behn, R.; Morgan, P.D. (Centre de Recherches en Physique des Plasmas, Lausanne (Switzerland)); Watterson, R.L. (Massachusetts Inst. of Tech., Cambridge (USA). Francis Bitter National Magnet Lab.). *Helvetica Physica Acta;* **55**: No. 2, 210(15 Nov 1982). (In German).

From 6. international conference on fast ion beam spectroscopy; Quebec (Canada) (17 - 20 Aug 1981).

With 39 refs.

Tokamak discharges produce hydrogen-isotope plasmas in a quasi-steady state, with radial electron temperature, Tsub(e)(r), and density nsub(e)(r), distribution usually centrally peaked, with typical values Tsub(e)(0) approx.= 1 - 3 keV, nsub(e)(r) approx.= 10^{14} cm^{-3}. Besides hydrogen, the plasma contains small quantities of carbon, oxygen, various construction or wall-conditioning materials such as Fe, Cr, Ni, Ti, Zr, Mo, and perhaps elements added for special diagnostic purposes, e.g., Si, Sc, Al, or noble gases. These elements are spatially fairly homogeneously distributed, with the different ionization states occurring near radial locations where Tsub(e)(r) approx.= Esub(i), the ionization potential. Thus, spectroscopic measurements of various plasma properties, such as ion temperatures, plasma motions or oscillations, radial transport rates, etc. are automatically endowed with spatial resolution. Furthermore the emitted spectra, even of heavier elements such as Fe or Ni, are fairly simple because only the ground levels are appreciably populated under the prevailing plasma conditions. Identification of near-ground transitions, including particularly magnetic dipole and intercombination transitions of ions with ionization potentials in the several keV range, and determination of their collisional and radiative transition probabilities will be required for development of appropriate diagnostics of tokamak-type plasma approaching the prospective fusion reactor conditions.

30943 **Studies of conceptual spheromak fusion reactors.** Katsurai, M.; Yamada, M. (Princeton Univ., NJ (USA). Plasma Physics Lab.). *Nuclear Fusion;* **22**: No. 11, 1407-1419(Nov 1982).

Paper copy only, copy does not permit microfiche production3 refs.

Preliminary design studies are carried out for a spheromak fusion reactor. Simplified circuit theory is applied to obtain the characteristic relations among various parameters of the spheromak configuration for an aspect ratio of A >or approx. 1.6. These relations are used to calculate the parameters for the conceptual designs of three types of fusion reactor: (1) the DT reactor with two-component-type operation, (2) the ignited DT reactor, and (3) the ignited catalysed-type DD reactor. With a total wall loading of approx. 4 $MW.m^{-2}$, it is found that edge magnetic fields of only approx. 4 T (DT) and approx. 9 T (Cat. DD) are required for ignited reactors of 1 m plasma (minor) radius with output powers in the

gigawatt range. An assessment of various schemes of generation, compression and translation of spheromak plasmas is presented.

30944 **Irradiation uniformity of spherical heavy-ion-driven ICF targets.** Sacks, R.A. (Science Applications Inc., Oakbrook, IL (USA)); Arnold, R.C.; Magelssen, G.R. (Argonne National Lab., IL (USA)). *Nuclear Fusion;* **22**: No. 11, 1421-1431(Nov 1982).

Estimates are presented for non-uniformity of energy deposition in spherical-shell ICF targets driven by beams of high-energy heavy ions. The principal consideration is shown to be the difference in penetration depth of ions entering at different angles relative to the surface of the sphere. Calculations are reported for 12-, 20-, and 32-beam symmetrical illumination. A rough assessment of required implosion symmetry indicates that a trade-off will exist between target gain and number of beams. A brief discussion of possible angular pressure-smoothing mechanisms is included.

30945 **Field-reversed configurations with a component of energetic particles.** Finn, J.M. (Naval Research Lab., Washington, DC (USA)); Sudan, R.N. (Cornell Univ., Ithaca, NY (USA). Lab. of Plasma Studies). *Nuclear Fusion;* **22**: No. 11, 1443-1518(Nov 1982).

Microfiche only, copy does not permit paper copy reproduction24 refs.

This review is concerned with the physics of field-reversed configurations created by energetic particles of large orbits, of which the earliest example is the Astron. The Astron concept has evolved into the Ion Ring Compressor in which a low-energy ring of ions is magnetically compressed to high energy for heating the confined plasma to thermonuclear ignition. A third version is the hybrid in which field reversal is created both by plasma currents as in a theta-pinch or a spheromak and a component of energetic large orbit ions to provide heating energy as well as improved stability. This paper treats first the injection, trapping, and formation of electron and ion rings from a theoretical standpoint as well as presenting the principal experimental results. The equilibria and the characteristics of the particle orbits are discussed in some detail including conditions under which the orbits cease to be integrable and pass to a stochastic description. The theory of magnetic compression of rings and the classical transport of heat and particles of the plasma confined in the closed-poloidal-field-line region is presented. The bulk of the review is concerned with low-frequency stability of such configurations by means of a generalized energy principle for treating the large-orbit particles in the Vlasov limit. The pathology of all possible unstable modes is discussed at some length. We conclude with an exhaustive survey of micro-instabilities driven by the energetic particle current for a special model and conclude that most of them are stabilized by strong gradients in density and magnetic field. A brief discussion on drift modes follows. Our present theoretical understanding of these systems, although still incomplete in some respects, nevertheless leads to the view that the promise of the very favourable features of fusion reactors based on these concepts is a sufficient impetus for their continued experimental and theoretical study.

30946 **Leakage of runaway electrons from tokamaks.** Wong, K.L. (Princeton Univ., NJ (USA). Plasma Physics Lab.). *Nuclear Fusion;* **22**: No. 11, 1528-1531(Nov 1982).

Letter-to-the-editor.

Runaway electron orbits are calculated in a tokamak magnetic field. It is shown that these electrons tend to drift towards a larger major radius with a velocity vsub(R)-vector = qcE/B_0R-circumflex. This effect may be relevant to some recent experimental observations in tokamaks, namely, the correlation between the loop voltage and the hard-X-ray flux in lower-hybrid-wave current-drive experiments and the exceptionally long plasma life-time in a low-density, low-loop-voltage tokamak discharge.

30947 **Volt-second analysis and consumption in Doublet III plasmas.** Ejima, S.; Callis, R.W.; Luxon, J.L.; Stambaugh, R.D.; Taylor, T.S.; Wesley, J.C. (General Atomic Co., San Diego, CA (USA)). *Nuclear Fusion;* **22**: No. 10, 1313-1319(Oct 1982).

A Poynting's Theorem method is used for evaluating the volt-second consumption in a tokamak discharge. The method accurately identifies the inductive and resistive components of the volt-second consumption, and allows both quantities to be determined from magnetic measurements made outside the plasma. Only simple computational techniques are required. Application of the method to typical Doublet III near-circular plasmas (R = 1.43 m, a = 0.44 m, b/a approx.= 1.2) indicates that the flux at the plasma surface required to establish the current flat-top is 2.0 +- 0.2 V.s/MA. Approximately 40% of this flux is consumed in resistive dissipation. This division between resistive and inductive flux differs significantly from that obtained using an alternative data analysis method in which the resistive loss is evaluated at the plasma axis. The reasons for the difference are discussed.

30948 **Mechanical divertor experiments in Macrotor.** Talmadge, S.; Conn, R.W.; Prinja, A.K.; Taylor, R.J. (Center for Plasma Physics and Fusion Engineering, University of California, Los Angeles (USA)). *Nuclear Fusion;* **22**: No. 10, 1369-1372(Oct 1982).

Letter-to-the-editor.

The feasibility of pumped limiters has been demonstrated on the Macrotor tokamak using both small neutral collection probes (2.5 cm diameter) and a large-area limiter (20 cm x 60 cm). Neutral pressures due to particle accumulation have reached as high as 8 microns. The particle removal efficiency of the neutral collection probes was measured to be 17% and estimated to be greater than 50% in the large-area limiter case. A quadratic dependence of the pressure on plasma density is observed.

30949 **Surface modification to waveguides.** Timberlake, J.R.; Ruzic, D.N.; Moore, R.L.; Cohen, S.A.; Manos, D.M. US Patent Application 6-388,873. 16 Jun 1982. 10p. Contract AC02-76CH03073.

A method is described for treating the interior surfaces of a waveguide to improve power transmission comprising the steps of mechanically polishing to remove surface protrusions; electropolishing to remove embedded particles; ultrasonically cleaning to remove any residue; coating the interior waveguide surfaces with an alkyd resin solution or electrophoretically depositing carbon lamp black suspended in an alkyd resin solution to form a 1μ to 5μ thick film; vacuum pyrolyzing the film to form a uniform adherent carbon coating.

From American Nuclear Society annual meeting; Los Angeles, CA, USA (6 Jun 1982).

30952 **PLT and PDX results.** Okabayashi, M. (Princeton University, Plasma Physics Laboratory, P.O. Box 451, Princeton, NJ 08544). *Transactions of the American Nuclear Society;* **41**: 163(Jun 1982). (CONF-820609—).

From American Nuclear Society annual meeting; Los Angeles, CA, USA (6 Jun 1982).

30953 **The Lawrence Livermore National laboratory inertial fusion program.** Holzrichter, J.F. (Lawrence Livermore National Laboratory, P.O. Box 808, Livermore, CA 94550). *Transactions of the American Nuclear Society;* **41**: 164(Jun 1982). (CONF-820609—).

From American Nuclear Society annual meeting; Los Angeles, CA, USA (6 Jun 1982).

30954 **Improved ion source.** Leung, K.N.; Ehlers, K.W. US Patent Application 6-374,847. 4 May 1982. 21p. Contract W-7405-ENG-48.

A magnetic filter for an ion source reduces the production of undesired ion species and improves the ion beam quality. High-energy ionizing electrons are confined by the magnetic filter to an ion source region, where the high-energy electrons ionize gas molecules. One embodiment of the magnetic filter uses permanent magnets oriented to establish a magnetic field transverse to the direction of travel of ions from the ion source region to the ion extraction region. In another embodiment, low energy 16 eV electrons are injected into the ion source to dissociate gas molecules and undesired ion species into desired ion species,

30955 **Mirror fusion test facility: magnet cyrogenics.** VanSant, J.H. (Lawrence Livermore National Lab., Univ. of California, Livermore, CA). *Advances in Cryogenic Engineering;* **27**: 557-564(1982). (CONF-810835—).

From 1981 cryogenic engineering conference; San Diego, CA, USA (10 Aug 1981).

The design of the Mirror Fusion Test Facility is described and illustrated, with the magnet, vacuum vessel, and the LHe flow system diagramed. Magnet cooling and thermal protection are described. The cryogenic system is described with a sectional view of the magnet coil illustrated, showing its construction and thermal shields. The design current and Joule heating rate are less than the specified maxima; the expected heat load on the magnet is also less than allowed. Cool-down and warm-up will not develop undesirable stresses. The specific cryogenic performance is yet to be evaluated.

30956 **Gaseous saturable absorbers for the Helios CO_2 laser system.** Haglund, R.F. Jr.; Nowak, A.V.; Czuchlewski, S.J. (Los Alamos National Lab., NM). *IEEE (Institute of Electrical and Electronics Engineers) Journal of Quantum Electronics;* **QE-17**: No. 9, 1799-1808(Sep 1981).

Saturable absorbers are widely used to suppress parasitic oscillations in large-aperture, high-power CO_2 fusion-laser systems. We report experimental results on SF_6-based gaseous saturable absorbers used for parasitic suppression in the eight-beam, 10 kJ Helios fusion-laser system. The gas mix effectively quenches self-lasing in the 9 and 10 μm branches of the CO_2 laser spectrum while simultaneously allowing high transmission of subnanosecond multiwavelength pulses for target-irradiation experiments. The gas isolator now in use consists of SF_6 and the additional fluorocarbons: 1, 1-difluoroethane (FC-152a); dichlorodifluoromethane (FC-12); chloropentafluoroethane (FC-115); 1,1-dichloro 2,2-difluoroethylene (FC-1112a); chlorotrifluoroethylene (FC-1113); and perfluorocyclobutane (FC-C318). The saturation of the mix was studied as a function of incident fluence, pressure, cell length, and incident wavelength. Experimental results are presented on the saturation properties of pure SF_6 and FC-152a and compared with the saturation behavior of CO_2 at 400°C.

30957 **Accelerator development for heavy ion fusion.** Talbert, W.L. Jr.; Sawyer, G.A. (Los Alamos Scientific Lab., NM). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **NS-28**: No. 2, 1331-1334(Apr 1981).

Accelerator technology development is presented for heavy ion drivers used in inertial-confinement fusion. The program includes construction of low-velocity test-bed accelerator facilities, development of analytical and experimental techniques to characterize ion-beam behavior, and the study of ion-beam energy deposition.

30958 **Progress in inertial fusion research at Los Alamos Scientific Laboratory.** Perkins, R.B. (Los Alamos Scientific Lab., NM (USA)). pp 3-11 of Plasma physics and controlled nuclear fusion research 1980. Proceedings of the eighth international conference held by the IAEA in Brussels, 1-10 July 1980. Vienna, Austria; International Atomic Energy Agency (1981).

From 8. international conference on plasma physics and controlled nuclear fusion research; Brussels, Belgium (1 Jul 1980).

The Los Alamos Scientific Laboratory Inertial Confinement Fusion Program is reviewed. Experiments using the Helios CO_2 laser system delivering up to 6kJ on target are described. Because breakeven energy estimates for laser drivers of 1 μm and above have risen and there is a need for CO_2 experiments in the tens-of-kJ regime as soon as practical, a first phase of Antares construction is now directed toward completion of two of the six original modules in 1983. These modules are designed to deliver 40kJ of CO_2 laser light on target.

30959 **Starfire - a conceptual design of a commercial tokamak power plant.** Abdou, M.A.; Baker, C.C. (Argonne National Lab., IL (USA)); DeFreece, D.; Trachsel, C. (McDonnell Douglas Astronautics Co., St. Louis, MO (USA)); Graumann, D. (General Atomic Co., San Diego, CA (USA)); Kokoszenski, J. (Parsons (Ralph M.) Co., Pasadena, CA (USA)). pp 119-131 of Plasma physics and controlled nuclear fusion research 1980. Proceedings of the eighth international conference held by the IAEA in Brussels, 1-10 July 1980. Vienna, Austria; International Atomic Energy Agency (1981).

From 8. international conference on plasma physics and controlled nuclear fusion research; Brussels, Belgium (1 Jul 1980).

Starfire is a conceptual design for a commercial tokamak power plant based on the deuterium/tritium/lithium fuel cycle. The emphasis of the study is on the simplicity of the engineering design, maintainability, lower electricity cost, and improved safety and environmental features. The reactor has a 7-m major radius and produces 1200MW of electric power. Starfire operates in a steady-state mode with the plasma current driven by a lower-hybrid RF system. The plasma purity control and exhaust system is based on the limiter/vacuum concept, which offers unique advantages for commercial power reactors. The blanket utilizes a solid lithium compound for tritium breeding and pressurized water as the coolant.

30960 **Tandem mirror reactors with thermal barriers.** Logan, B.G.; Arfin, B.; Barr, W.L. (California Univ., Livermore (USA). Lawrence Livermore National Lab.). pp 133-141 of Plasma physics and controlled nuclear fusion research 1980. Proceedings of the eighth international conference held by the IAEA in Brussels, 1-10 July 1980. Vienna, Austria; International Atomic Energy Agency (1981).

From 8. international conference on plasma physics and controlled nuclear fusion research; Brussels, Belgium (1 Jul 1980).

Preliminary calculations of Q and magnet designs are presented for three different versions of tandem mirror reactors (TMR) using thermal barriers to enhance plug potentials by auxiliary electron heating. These three versions, called A-cell-barrier TMR, axisymmetric-barrier TMR, and inside-barrier TMR, exhibit reduced plug density ($nsub(p) << 10^{19} m^{-3}$) and less required magnetic mirror field (Bsub(mirror) approximately 9T) compared to TMR designs without thermal barriers. A-cell barrier TMR Q's range from 5 to 25 depending on the central-cell length (Lsub(c)=100 to 200m) and peak centre-cell beta βsub(c)(0.3 to 0.7) allowed by MHD stability. Axisymmetric-barrier TMR Q's range from 14 at Lsub(c)=100m to 30 at Lsub(c)=200m, if peak βsub(c)=1. From a global equilibrium model for the inside-barrier TMR, Q values greater than 15 are achieved for nu=0.5 in the modified Boltzmann relation for the plug potential. Even higher Q's are obtained by using ECRF heating in the barrier to create a hot, mirror-trapped electron population. TMR's buring D-D as a fuel have been analysed with a modified version of the global-equilibrium model and under the assumption of an axisymmetric plug and barrier stabilized by surface magnetic fields. High-barrier mirror ratio is now feasible (Rsub(b)=30-50), and short barrier length permits Qsub(DD) values greater than 5.

30961 **Laser fusion studies at Naval Research Laboratory.** McMahon, J.; Orens, J.; Bodner, S. (Naval Research Lab., Washington, DC (USA)). pp 227-238 of Plasma physics and controlled nuclear fusion research 1980. Proceedings of the eighth international conference held by the IAEA in Brussels, 1-10 July 1980. Vienna, Austria; International Atomic Energy Agency (1981).

From 8. international conference on plasma physics and controlled nuclear fusion research; Brussels, Belgium (1 Jul 1980).

The NRL group is studying the technical feasibility of high-gain laser fusion pellets driven by low irradiance ($< 10^{14} W.cm^{-2}$) multinanosecond lasers. In earlier experiments it was shown that both absorption and hydrodynamic efficiencies were consistent with

high-gain pellet designs. In addition to extending this work to greater intensities and larger spot sizes, research is under way on the origins and magnitude of target preheating at low irradiance, on experimental and theoretical work on the issue of symmetry and into the related questions of Rayleigh-Taylor instability and mixing of layers in multilayer targets. Substantial progress has been made in all of these areas: the rear surfaces of slab targets have been ablatively accelerated to velocities above $10^7 cm.s^{-1}$ with acceptably low levels of preheat, and there is experimental evidence of smoothing of spatial non-uniformities in the laser profile on a transverse scale of 100μm or less.

30962 **Interaction of short-wavelength laser radiation with spherical-shell targets.** Slater, D.C.; Berger, R.L.; Busch, G.E. (KMS Fusion, Inc., Ann Arbor, MI (USA)). pp 249-260 of Plasma physics and controlled nuclear fusion research 1980. Proceedings of the eighth international conference held by the IAEA in Brussels, 1-10 July 1980. Vienna, Austria; International Atomic Energy Agency (1981).

From 8. international conference on plasma physics and controlled nuclear fusion research; Brussels, Belgium (1 Jul 1980).

Laser-plasma interaction experiments have been performed at both 1.05μm and 0.53μm. Measurements of absorption and X-ray production from spherical-shell targets have shown significant differences between the two laser wavelengths. The laser power on target up to 0.7-TW at 0.53μm was sufficient to observe effects from a high-temperature corona and confirmed the earlier predictions for wavelength scaling of the hot-electron temperature.

30963 **Simplified poloidal divertor experiments in Doublet III.** Nagami, M.; Fujisawa, N.; Ioki, K. (Japan Atomic Energy Research Inst., Tokai, Ibaraki. Tokai Research Establishment). pp 367-380 of Plasma physics and controlled nuclear fusion research 1980. Proceedings of the eighth international conference held by the IAEA in Brussels, 1-10 July 1980. Vienna, Austria; International Atomic Energy Agency (1981).

From 8. international conference on plasma physics and controlled nuclear fusion research; Brussels, Belgium (1 Jul 1980).

Experimental results are reported on a single null poloidal divertor and on an expanded boundary configuration produced in the upper half of the Doublet III vacuum vessel. In the single null poloidal divertor (Part 1), a line-averaged plasma density of up to $8x10^{13} cm^{-3}$ was obtained. Without employing any particular divertor chamber, this simple divertor reduced the accumulation of metallic impurities and radiative power loss in the main plasma and improved the energy confinement time. The plasma density in the divertor region increased non-linearly with the increase of the main plasma density. This was associated with a strong concentration of hydrogen recycling in the divertor region. High-density discharges also provided condensed radiative cooling in the divertor region, i.e. high-density diverted discharges realize remote radiative cooling. In the expanded boundary configuration (Part 2), the diverted flux was expanded by more than a factor of ten before reaching the vessel wall. The central radiative power falls by an order of magnitude and a significant amount (approximately 50%) of the Ohmic power was radiated in the expanded boundary region. Comparison of discharges with and without the expanded boundary showed: (1) reduction of the influx of nickel and oxygen impurities by an order of magnitude; (2) reduction of the influx of injected argon by a similar factor; and (3) that the concentration of argon in a non-diverted plasma was reduced by a factor of 10 when the expanded boundary was turned on.

30964 **Progress at NRL and Cornell in light ion beam research for inertial-confinement fusion.** Cooperstein, G.; Goldstein, S.A.; Mosher, D. (Naval Research Lab., Washington, DC (USA)). pp 401-411 of Plasma physics and controlled nuclear fusion research 1980. Proceedings of the eighth international conference held by the IAEA in Brussels, 1-10 July 1980. Vienna, Austria; International Atomic Energy Agency (1981).

From 8. international conference on plasma physics and controlled nuclear fusion research; Brussels, Belgium (1 Jul 1980).

Proof-of-principle and scaling experiments for light-ion-driven inertial-confinement fusion are in progress at NRL. Important advances have been made in the areas of ion production with pinch-reflex diodes and of beam focusing and transport. At Cornell, light-ion beams of Li^{+1}, B^{+1} and C^{+1} have been produced and work on producing low-divergence ion beams has progressed.

30965 **Progress toward fusion with light ions.** Kuswa, G.W. (Sandia National Labs., Albuquerque, NM (USA)). pp 413-421 of Plasma physics and controlled nuclear fusion research 1980. Proceedings of the eighth international conference held by the IAEA in Brussels, 1-10 July 1980. Vienna, Austria; International Atomic Energy Agency (1981).

From 8. international conference on plasma physics and controlled nuclear fusion research; Brussels, Belgium (1 Jul 1980).

New results in target design, beam generation and transport, and pulse power technology have led to a programme shift stressing light-ion-driven inertial-confinement fusion. According to present estimates, a gain-ten fusion pellet will require at least 1MJ and approximately 100TW power input. Progress in ion sources has resulted in beam power density of approximately $1TW.cm^{-2}$, a factor of ten increase over the last year, and cylindrical implosion experiments have been performed. Other experiments have demonstrated the ability to transport ion and electron beams with high efficiency and have confirmed numerical predictions on the properties of beam transport channels converging at a target. These developments, together with improvements in pulse power technology, allow the projection that the 72-beam, 100-TW Particle Beam Fusion Accelerator, PBFA II, will attain target output energy equal to stored energy in the accelerator.

30966 **Argonne heavy-ion fusion program. Accelerator demonstration facility (phase zero).** Watson, J.M.; Arnold, R.C.; Bogaty, J.M. (Argonne National Lab., IL (USA)). pp 425-434 of Plasma physics and controlled nuclear fusion research 1980. Proceedings of the eighth international conference held by the IAEA in Brussels, 1-10 July 1980. Vienna, Austria; International Atomic Energy Agency (1981).

From 8. international conference on plasma physics and controlled nuclear fusion research; Brussels, Belgium (1 Jul 1980).

The feasibility of the RF linac heavy-ion driver for inertial-confinement fusion is generally now accepted. There are, however, many beam manipulations that are specific to the RF linac HIF driver which must be demonstrated. Accelerator projects have begun at Argonne National Laboratory (ANL) to resolve some of the uncertainties. A minimum programme has started which involves demonstration of some critical issues for linacs and accumulator rings (injection, accumulation, extraction, emittance growth, beam life-time, internal compression, etc.). An improved facility is also proposed which would deposit more than 3kJ on a 0.5-mm-radius spot for interesting energy deposition experiments. The experimental programme during the past two years has developed a high-intensity xenon source, a 1.5-MV pre-accelerator, and the initial RF linac cavities for the demonstration projects.

30967 **Fusion applications of the MEQALAC.** Maschke, A.W. (Brookhaven National Lab., Upton, NY (USA)). pp 435-436 of Plasma physics and controlled nuclear fusion research 1980. Proceedings of the eighth international conference held by the IAEA in Brussels, 1-10 July 1980. Vienna, Austria; International Atomic Energy Agency (1981).

From 8. international conference on plasma physics and controlled nuclear fusion research; Brussels, Belgium (1 Jul 1980).

Published in summary form only.

30968 **Multi-megajoule heavy-ion induction linacs.** Faltens, A.; Hoyer, E.; Keefe, D.; Laslett, L.J.; Smith, L. (California Univ., Berkeley (USA). Lawrence Berkeley Lab.); Bangerter, R.O. (California Univ., Livermore (USA). Lawrence Livermore National Lab.); Herrmannsfeldt, W.B. (Stanford Univ., CA (USA)). pp 437-445 of Plasma physics and controlled nuclear fusion research 1980. Proceedings of the eighth international conference held by the IAEA in Brussels, 1-10 July 1980. Vienna, Austria; International Atomic Energy Agency (1981).

From 8. international conference on plasma physics and controlled nuclear fusion research; Brussels, Belgium (1 Jul 1980).

One of the most promising Inertial Confinement Fusion (ICF) igniter concepts is the heavy-ion induction linac system. A driver providing a beam of heavy ions has the potential advantages of a short ion range in the target material, a very large power transport capability, and the ability to produce high power densities at distances of 5-10m from the final lens elements required in a power-producing reactor. Many driver configurations are possible, and it has been generally found that the driver would be the dominant cost item in a power plant. Some preliminary results obtained from a design and cost optimization computer program for an ion induction linac accelerator are presented. An estimate of the effect of ICF system cost on the cost of generated electricity is made.

30969 **Neutral-beam injector research and development at ORNL and LBL/LLL in the USA.** Barber, G.C.; Blue, C.W.; Dagenhart, W.K. (Oak Ridge National Lab., TN (USA)). pp 449-456 of Plasma physics and controlled nuclear fusion research 1980. Proceedings of the eighth international conference held by the IAEA in Brussels, 1-10 July 1980. Vienna, Austria; International Atomic Energy Agency (1981).

From 8. international conference on plasma physics and controlled nuclear fusion research; Brussels, Belgium (1 Jul 1980).

Neutral-beam injectors have been developed and applied successfully for injection heating of PLT and ISX-B plasmas. Present and near-future injection systems for PDX, ISX-C, DIII, MFTF and TFTR are similar in principle, although scaled in beam energy, current and pulse width to meet the machine requirements. In addition, as shown in recent calculations, an INTOR or ETF device will also utilize a positive-ion-based system with possible trade-offs between beam energy, current and pulse length, i.e. beam energies of about 100keV are acceptable if the current and/or pulse length may be increased to appropriate values. Recent direct energy recovery experiments have shown that a positive-ion-based system can be expected to operate at an overall system efficiency of up to 50% if the beam energy is limited to a value below 75keV/nucleon. For injection energy above 200keV, a negative-ion-based neutral-beam injector may be needed. The performance highlights are reported of the existing ORNL and LBL/LLL beam systems and the necessary R and D needs for future high-efficiency, long-pulse beam systems.

30970 **Development of superconducting magnets for use in nuclear fusion machines.** Haubenreich, P.N.; Lubell, M.S. (Oak Ridge National Lab., TN (USA)); Cornish, D.N. (California Univ., Livermore (USA). Lawrence Livermore National Lab.); Beard, D.S. (Department of Energy, Washington, DC (USA). Office of Fusion Energy). pp 467-469 of Plasma physics and controlled nuclear fusion research 1980. Proceedings of the eighth international conference held by the IAEA in Brussels, 1-10 July 1980. Vienna, Austria; International Atomic Energy Agency (1981).

From 8. international conference on plasma physics and controlled nuclear fusion research; Brussels, Belgium (1 Jul 1980).

A brief summary is given of current efforts and future plans in development of superconducting magnets for tokamaks and mirror fusion devices.

30971 **Development of tritium technology for United States magnetic fusion energy programme.** Anderson, J.L. (Los Alamos Scientific Lab., NM (USA)); Wilkes, W.R. (Monsanto Research Corp., Miamisburg, OH (USA). Mound Facility); Maroni, V.A. (Argonne National Lab., IL (USA)). pp 471-478 of Plasma physics and controlled nuclear fusion research 1980. Proceedings of the eighth international conference held by the IAEA in Brussels, 1-10 July 1980. Vienna, Austria; International Atomic Energy Agency (1981).

From 8. international conference on plasma physics and controlled nuclear fusion research; Brussels, Belgium (1 Jul 1980).

Tritium technology development for the US Department of Energy fusion programme is taking place principally at three laboratories, Mound Facility, Argonne National Laboratory and Los Alamos Scientific Laboratory. The paper reviews the major points of each of the three programmes and looks at aspects of the tritium technology being developed at other laboratories within the USA. Facilities and experiments to be discussed include (a) the Tritium Effluent Control Laboratory and the Tritium Storage and Delivery System for the Tokamak Fusion Test Reactor at Mount Facility, (b) the Lithium Processing Test Loop and the solid breeder blanket studies at Argonne, and (c) the Tritium Systems Test Assembly at Los Alamos.

30972 **Plasma heating by a wide ksub(parallel)-spectrum waveguide system in the ion cyclotron range of frequencies.** Ono, M.; Stix, T.H.; Wong, K.L.; Horton, R. (Princeton Univ., NJ (USA). Plasma Physics Lab.). pp 501-503 of Plasma physics and controlled nuclear fusion research 1980. Proceedings of the eighth international conference held by the IAEA in Brussels, 1-10 July 1980. Vienna, Austria; International Atomic Energy Agency (1981).

From 8. international conference on plasma physics and controlled nuclear fusion research; Brussels, Belgium (1 Jul 1980).

A reactor-heating concept utilizing a wave-guide-launched ion-Bernstein wave in the ion-cyclotron range of frequencies is presented. Details of wave-launching transformation, propagation and absorption, together with low-power experimental results from the ACT-1 toroidal device, are summarized.

30973 **Lower-hybrid heating and current drive in tokamaks and related experiments.** Porkolab, M.; Schuss, J.J.; Takase, Y. (Massachusetts Inst. of Tech., Cambridge (USA). Francis Bitter National Magnet Lab.). pp 507-514 of Plasma physics and controlled nuclear fusion research 1980. Proceedings of the eighth international conference held by the IAEA in Brussels, 1-10 July 1980. Vienna, Austria; International Atomic Energy Agency (1981).

From 8. international conference on plasma physics and controlled nuclear fusion research; Brussels, Belgium (1 Jul 1980).

Experimental results on waveguide-plasma coupling and RF heating in the vicinity of the lower-hybrid frequency in the M.I.T. Alcator-A and in Versator II tokamaks are reported. The forthcoming Alcator-C lower-hybrid heating experimental parameters are summarized. From Princeton results on several small-scale experiments, related to waveguide-plasma coupling (H-1) and RF current drive (ACT-1), are presented, as well as recent theoretical investigations of efficient RF current generation using lower-hybrid waves or Alfven waves.

30974 **Scope and status of the USA Engineering Test Facility including relevant TFTR research and development.** Becraft, W.R. (Oak Ridge National Lab., TN (USA)); Reardon, P.J. (Princeton Univ., NJ (USA). Plasma Physics Lab.). pp 563-573 of Plasma physics and controlled nuclear fusion research 1980. Proceedings of the eighth international conference held by the IAEA in Brussels, 1-10 July 1980. Vienna, Austria; International Atomic Energy Agency (1981).

From 8. international conference on plasma physics and controlled nuclear fusion research; Brussels, Belgium (1 Jul 1980).

The vehicle by which the fusion programme would move into the engineering testing phase of fusion power development is designated the Engineering Test Facility (ETF). The progress toward the design and construction of the ETF will reflect the significant achievements of past, present, and future experimental tokamak devices. Some of the features of this foundation of experimental results and relevant engineering designs and operation will derive from the Tokamak Fusion Test Reactor (TFTR) Project, now nearing the completion of its construction phase. The ETF would provide a test-bed for reactor components in the fusion environment. To initiate preliminary planning for the ETF decision, the Office of Fusion Energy (OFE) established the ETF Design Center activity to prepare the design of the ETF. This paper describes the design status of the ETF and discusses some highlights of the TFTR R and D work.

30975 **Alternative fusion fuel cycle research.** Conn, R.W.; Shuy, G.W. (California Univ., Los Angeles (USA). School of Engineering and Applied Science); Kerst, D. (Wisconsin Univ., Madison (USA)). pp 621-630 of Plasma physics and controlled nuclear fusion research 1980. Proceedings of the eighth international conference held by the IAEA in Brussels, 1-10 July 1980. Vienna, Austria; International Atomic Energy Agency (1981).

From 8. international conference on plasma physics and controlled nuclear fusion research; Brussels, Belgium (1 Jul 1980).

New effects, including nuclear elastic scattering, reaction propagation, and self-interaction between energetic ions promoted from the bulk Maxwellian, are found to increase the reactivity of alternate fuel cycle mixtures. The effects are more pronounced at high electron temperature (>50keV) typical of cycles from D-D to p-^{11}B. Superconducting coil designs for octupole configurations can be designed to operate in the low neutron environment of an alternate fuel cycle reactor and stable, levitated octupole configurations have been found in which the external coils provide stabilization without influencing the equilibrium. Studies of D-D reactors indicate that the tritium inventory can be 15 times lower than an equivalent power D-T device. For catalysed D-D systems, the reduction is 100 and for D-^{3}He it is about 1000. Little difference is found in overall fuel handling and vacuum system costs. Reactors with D-^{3}He may result in 10 to 100 times less radiation dose in a possible accident scenario compared to D-T systems but D-D reactors may actually generate higher external doses. Finally, reactor scenarios are studied which involve generator reactors which produce ^{3}He from a semi-catalysed D-D unit to be burned in satellite reactors located nearer the user.

30976 **LASL Fast Liner Experiment.** Sherwood, A.R.; Cantrell, E.L.; Henins, I.; Hoida, H.W.; Jarboe, T.R.; Malone, R.C.; Marshall, J. (Los Alamos Scientific Lab., NM (USA)). pp 691-698 of Plasma physics and controlled nuclear fusion research 1980. Proceedings of the eighth international conference held by the IAEA in Brussels, 1-10 July 1980. Vienna, Austria; International Atomic Energy Agency (1981).

From 8. international conference on plasma physics and controlled nuclear fusion research; Brussels, Belgium (1 Jul 1980).

The LASL Fast Liner Experiment explored a fusion concept in which a suitably prepared plasma is adiabatically compressed to thermonuclear temperatures and densities by a rapidly imploding solid metal liner. A prepared plasma having $\beta > 1$ is in contact with the liner and end plugs, and contains an embedded magnetic field to inhibit thermal conduction. Cylindrical liners are magnetically imploded by a large axial current carried in the liner shell. The experimental work to develop this concept involved attempts to provide a suitable plasma for liner implosions and studies of magnetically driven liner implosions. In the plasma preparation experiments, a coaxial plasma gun was used to inject plasma into a simulated liner geometry. About 2μs after plasma injection a density of $3x10^{16}cm^{-3}$, a temperature of 40eV, and an embedded azimuthal field of 10kG were measured. In the implosion studies, cylindrical aluminium liners were imploded by Z-pinch currents of 10-15MA. Symmetrical implosions having velocities in the range 4-$6x10^5cm.s^{-1}$ have been obtained for liners with typical initial dimensions of 10cm length, 5cm diameter and 1mm thickness using a 1.8-MJ capacitor bank. Implosion velocities of $9-10x10^5cm.s^{-1}$ were observed for 6-cm-long, 5.6-cm-diameter, 1-mm-thick liners driven by a 2.4-MJ bank. In each case, current drive to the liner was maintained until the liner converged on the axis. The observed velocities and trajectories agree well with the predictions of a one-dimensional code, CHAMISA.

30977 **Stimulated-Brillouin-scattering studies in low-density plasmas using microwave sources.** Mase, A.; Luhmann, N.C.; Holt, J. Jr.; Huey, H.; Rhodes, M. (California Univ., Los Angeles (USA)); Di Vergilio, W.F.; Thomson, J.J. (TRW, Inc., Redondo Beach, CA (USA)); Randall, C.J. (Lawrence Livermore National Lab., CA (USA)). pp 745-758 of Plasma physics and controlled nuclear fusion research 1980. Proceedings of the eighth international conference held by the IAEA in Brussels, 1-10 July 1980. Vienna, Austria; International Atomic Energy Agency (1981).

From 8. international conference on plasma physics and controlled nuclear fusion research; Brussels, Belgium (1 Jul 1980).

Observations of stimulated Brillouin scattering (SBS) in microwave interaction with a plasma, as verified by the satisfaction of the frequency and wavelength matching rules and growth rate, are presented. A small amount of chamber reflectivity causes ion fluctuations due to the standing-wave ponderomotive force, which then serve as an enhanced noise level for the initiation of the instability. Saturation of the backscatter is observed and compared with existing theories. The control of SBS using finite-bandwidth comb-type or random-noise-type pumps is also reported.

30978 **Plasma physics and controlled nuclear fusion research 1980. Proceedings of the eighth international conference held by the IAEA in Brussels, 1010, July 1980.** Vienna, Austria; International Atomic Energy Agency (1981). vp. (CONF-800707—Vol.2).

From 8. international conference on plasma physics and controlled nuclear fusion research; Brussels, Belgium (1 Jul 1980).

Abstracts for each paper were entered into the data base. (MOW)

30979 **Effect of nonlinear refraction on beam brightness in laser fusion applications.** Phipps, C.R. Jr.; Thomas, S.J.; Watkins, D.E. (Scientific Lab., Los Alamos, NM). *Proceedings of the International Conference on Lasers;* 878-888(1979).

The far-field brightness loss due to nonlinear refraction of a laser beam of finite transverse extent is a limitation for phase conjugation. We present exact calculations, supported by measurements, for these effects in Gaussian beams.

30982 **(AECL—6076(Rev.C)) AELIB user's manual.** Evans, L.E.; Klawitter, G.L. (eds.). (Atomic Energy of Canada Ltd., Chalk River, Ontario. Chalk River Nuclear Labs.). May 1981. 543p. NTIS (US Sales Only), PC A23/MF A01. Order Number DE83700416.

This report is an updatable manual for users of AELIB, the AECL Library of FORTRAN-callable routines for the CRNL

CDC 6600/CYBER 170 system. It provides general advice on the use of this library and detailed information on the selection and usage of particular library routines.

30983 **(AECL—7428) Sampling from the normal and exponential distributions.** Chaplin, K.R.; Wills, C.A. (Atomic Energy of Canada Ltd., Chalk River, Ontario. Chalk River Nuclear Labs.). Jan 1982. 48p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE83700417.

Methods for generating random numbers from the normal and exponential distributions are described. These involve dividing each function into subregions, and for each of these developing a method of sampling usually based on an acceptance rejection technique. When sampling from the normal or exponential distribution, each subregion provides the required random value with probability equal to the ratio of its area to the total area. Procedures written in FORTRAN for the CYBER 175/CDC 6600 system are provided to implement the two algorithms.

30984 **(BDX—613-2941) Software quality assurance.** Moody, S.D. (Bendix Corp., Kansas City, MO (USA)). Mar 1983. Contract AC04-76DP00613. 22p. NTIS, PC A02/MF A01. Order Number DE83010520.

The merits of SQA practices over the entire life cycle of the software product can be summarized as follows: more reliable product, lower life cycle costs, early exposure of life cycle inconsistencies, and early exposure of design errors. A guideline for the development of a Software Quality Assurance Program has been drafted. Topics critical to the development of a Software Quality Assurance Program are discussed.

30985 **(BNL—32831) SOCLIR: a system for optimal control of linear regulators.** Schaedler, J.; Anandalingam, G. (Brookhaven National Lab., Upton, NY (USA)). Mar 1983. Contract AC02-76CH00016. 46p. NTIS MF A01. Order Number DE83010881.

Microfiche only, copy does not permit paper copy reproduction.

SOCLIR is a software package for optimally controlling the output of a system to follow idealized time-paths. It provides a time sequence of control (policy) solutions that would regulate the system over time at minimum deviation. The linear regulator problem forms a special class of optimal control problems which is also called linear quadratic tracking problem; the system to be regulated is approximated by a linear model and both positive and negative deviations from the ideal time-path is penalized symmetrically in a quadratic cost function. The cost function also includes a cost attached to controlling the system. The theory is given in detail in the next section.

30986 **(CONF-830447—1) Implications of recent research on human factors for teachers of computing skills.** Gabriel, J.R. (Argonne National Lab., IL (USA)). 1983. Contract W-31-109-ENG-38. 7p. NTIS, PC A02/MF A01. Order Number DE83010713.

From Workshop on small computers; Atlanta, GA, USA (3 Apr 1983).

Portions are illegible in microfiche products.

Recent studies of people at work have produced a classification of their activity applicable to the history of education and to teaching itself. These insights suggest ways to teach computing and to build an innovative program to integrate schools and colleges with local industry to the benefit of all three.

30987 **(CONF-8105212—1) Quantum mechanical Hamiltonian models of discrete processes that erase their own histories: application to Turing machines.** Benioff, P.A. (Argonne National Lab., IL (USA)). 1981. Contract W-31-109-ENG-38. 41p. NTIS, PC A03/MF A01. Order Number DE83010584.

From Physics of computation conference; Cambridge, MA, USA (6 May 1981).

Work done before on the construction of quantum mechanical Hamiltonian models of Turing machines and general descrete processes is extended here to include processes which erase their own histories. The models consist of three phases, the forward process phase in which a map T is iterated and a history of iterations is generated, a copy phase which is activated if and only if T reaches a fix point, and an erase phase which erases the iteration history, undoes the iterations of T and recovers the initial state except for the copy system. A ballast system is used to stop the evolution at the desired state. The general model so constructed is applied to Turing machines. The main changes are that the system undergoing the evolution corresponding to T iterations becomes three systems corresponding to the internal machine, the computation tape, and computation head. Also the copy phase becomes more complex since it is desired that this correspond also to a copying Turing machine.

30988 **(CONF-8108158—1) Array-processing features in the next Fortran.** Smith, B.T. (Argonne National Lab., IL (USA)). 1981. Contract W-31-109-ENG-38. 16p. NTIS, PC A02/MF A01. Order Number DE83009009.

From Conference on relationship between numerical computation and programming languages; Boulder, CO, USA (3 Aug 1981).

Portions are illegible in microfiche products.

This paper summarizes the array-processing facilities being proposed for the next Fortran standard by the Fortran Standard's committee X3J3. The facilities include: automatic arrays; element-by-element array operations; array expressions; new conditional control constructs for logical arrays; and a large collection of new intrinsics for arrays. The paper concludes with a comparison of the Fortran facilities with the ALGOL68-TORRIX68 system for computations in linear vector spaces.

30989 **(CONF-8206178—1) Solving open questions with an automated theorem-proving program.** Wos, L. (Argonne National Lab., IL (USA)). 1982. Contract W-31-109-ENG-38. 39p. NTIS, PC A03/MF A01. Order Number DE83008686.

From 6. CADE conference on automated deduction; New York, NY, USA (1 Jun 1982).

The primary objective of this paper is to demonstrate the feasibility of using an automated theorem-proving program as an automated reasoning assistant. Such usage is not merely a matter of conjecture. As evidence, we cite a number of open questions which were solved with the aid of a theorem-proving program. The open questions are taken from studies of ternary boolean algebra, finite semigroups, equivalential calculus, and the design of digital circuits. Despite the variety of successes, no doubt there still exists many who are very skeptical of the value of automating any form of deep reasoning. It is the nature of this skepticism which brings us to the second objective of the paper. The secondary objective is that of dispelling, at least in part, some of the resistance to such automation. To do this, we discuss two myths which form the basis for the inaccurate evaluation of both the usefulness and the potential of automated theorem proving. Rejection of the two myths removes an important obstacle to assigning to an automated theorem-proving program its proper role - the role of colleague and assistant.

30990 **(CONF-8206178—2) Procedure implementation through demodulation and related tricks.** Winker, S.K.; Wos, L. (Argonne National Lab., IL (USA)). 1982. Contract W-31-109-ENG-38. 32p. NTIS, PC A03/MF A01. Order Number DE83010578.

From 6. CADE conference on automated deduction; New York, NY, USA (1 Jun 1982).

There are many common tasks which are dispatched by the computer programmer by means of procedures or subroutines. These tasks range from simple bookkeeping and updating to the seeking of the generalization of two given formulas. The corresponding procedures, or their equivalent, are often needed to complete some activity being performed by an automated theorem-proving program. Such procedures may appear to be either very cumbersome for an automated theorem-proving program or even beyond the capacity of such a program. In this paper we give examples that show that neither is the case. Demodulation is the key to implementing the procedures which accomplish such common tasks. We give here sets of demodulators for accomplishing a wide variety of tasks. The first given demodulator set enables the program to find the least general subsumer of two given unit clauses.

We then turn our attention to questions of counting and classifying, bookkeeping and updating, and cleanup after case analysis. Finally, we give a set of demodulators for coping with set-theory in a natural way. The material contained here is a sample of the additional possibilities for the use of demodulation and for automated theorem proving in general. It turns out that demodulation is even more powerful than was realized with its uses for both simplification and canonicalization.

30991 **(DOE/EI/10682—T1) Time-staged linear programs. Technical report SOL 80-28.** Dantzig, G.B. (Stanford Univ., CA (USA). Systems Optimization Lab.). Oct 1980. Contract AT03-80EI10682;AT03-76ER72018. 27p. NTIS, PC A03/MF A01. Order Number DE83010110.

The paper outlines some procedures for solving time-staged (staircase) linear programs. Two approaches are discussed: the first based on modifying the block structure of the basis so that there are square non-singular sub-blocks along the diagonal; and the second based on the nested decomposition principle except applied to the dual system instead of the primal as proposed by Glassey and by Manne and Ho.

30992 **(DOE/ER/02383—0087) General purpose PDP-11 interface processor.** Purtilo, J. (Illinois Univ., Urbana (USA). Dept. of Computer Science). Oct 1982. Contract AC02-76ER02383. 37p. (COO—2383-0087). NTIS, PC A03/MF A01. Order Number DE83009574.

The Z80 interface card, which for simplicity we refer to as the Zcard, is a general purpose microprocessor which is directly interfaced to the Whaley multiplexor, itself implemented on PDP-11 series computers at the University of Illinois. The Zcard provides two serial ports at EAI interface levels and contains up to 16K of local memory. The principle function of the Zcard is to serve as an interface in which the user might alter protocols, change interface characteristics (e.g. baud rate, hardware echo, or flow control), or switch between synchronous and asynchronous modes all under software control. In addition, the Zcard provides extra lines for control of external devices (e.g. modem) and input of status data. In the simpliest use, the Zcard runs a program, downloaded from the PDP-11, which emulates the level EIAFB card (previously developed for the Whaley Multiplexor) for serial communication with terminals. Using no flow control, Zcard performance seems superior to that of the EIAFB card in that no characters are lost under normal use (due to the much larger buffer which the Zcard can provide). The Zcard can further distinguish itself from the EIAFB card in that flow control can be enabled by software. A more sophisticated application of the Zcard might include linking several Zcards (using a synchronous option and both of the provided ports) into a network. In this capacity, a ring topology suggests itself as the most immediate choice, although many alternate connection schemes can be envisioned. This report is intended to summarize the project as well as provide an outline for those intending to modify or program the Zcard.

30993 **(HMI—376) HMI scientific report 1981.** (Hahn-Meitner-Institut fuer Kernforschung Berlin G.m.b.H. (Germany, F.R.). Bereich Datenverarbeitung und Elektronik). 1982. 224p. (In German). Available from Fachinformationszentrum Energie, Physik, Mathematik, Karlsruhe (Germany, F.R.).

In the HMI data pocessing and electronics department, besides the general service activities, several research- and development projects are under way: Computer systems. Numerical and applied mathematics. Software development. Process computer systems - hardware. Nuclear electronics, techniques for measurement and control. Research on electronic devices and irradiation tests. Central data processing. Collaboration with the BERNET project of the Wissenschaftliches Rechenzentrum Berlin (WRB).

30994 **(IKE—6-EUR-2) EURLIB data adjustment to integral experiments. 2. progress report.** Baechle, R.D.; Hehn, G.; Kicherer, G. (Stuttgart Univ. (Germany, F.R.). Inst. fuer Kernenergetik und Energiesysteme). Sep 1981. 22p. Available from Fachinformationszentrum Energie, Physik, Mathematik, Karlsruhe (Germany, F.R.).

The 'global detector version' of the data adjustment code ADJUST-EUR has been completed and the code is in test. The lay-out of the programme is shown and a description of various subroutines are given. In the global detector concept all detector measurements are taken together in one adjoint calculation, so that the calculation effort is reduced appreciably. The total adjoint source may be weighted sum of detector responses, in order to get similar sensitivity profiles, compared with the demand of power reactor shielding. The evaluation of the ASPIS experiment has been started with ANISN and DOT calculations. Since only one-dimensional ANISN runs can be used in the iterative adjustment procedure, the transversal leakage must be included by buckling factors, derived from DOT results. The comparison between one- and two-dimensional results shows, that we have to consider variations of the buckling factor in energy and in space, where the local dependence is the larger effect. This means, that the iron block has to be subdivided into several material regions with different buckling corrections.

30995 **(JAERI-M—9605) Model for calculating the optimal replacement interval of computer systems.** Fujii, M.; Asai, K. (Japan Atomic Energy Research Inst., Tokyo). Aug 1981. 51p. (In Japanese). NTIS (US Sales Only), PC A04/MF A01. Order Number DE83701504.

A mathematical model for calculating the optimal replacement interval of computer systems is described. This model is made to estimate the best economical interval of computer replacement when computing demand, cost and performance of computer, etc. are known. The computing demand is assumed to monotonously increase every year. Four kinds of models are described. In the model 1, a computer system is represented by only a central processing unit (CPU) and all the computing demand is to be processed on the present computer until the next replacement. On the other hand in the model 2, the excessive demand is admitted and may be transferred to other computing center and processed costly there. In the model 3, the computer system is represented by a CPU, memories (MEM) and input/output devices (I/O) and it must process all the demand. Model 4 is same as model 3, but the excessive demand is admitted to be processed in other center. (1) Computing demand at the JAERI, (2) conformity of Grosch's law for the recent computers, (3) replacement cost of computer systems, etc. are also described.

30996 **(JINR—10-82-84) GRANAS system for graphic analysis of nuclear spectrometrical data.** Brudanin, V.B.; Bulla, G.; Bulla, F.; Vylov, Ts.; Medved', S.V. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Problems). 1982. 6p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700423.

An interactive display system for graphic analysis of spectrometrical data by means of the EC-1040 computer and a videoterminal consisting of the KRS 4201 computer, GD-71 graphical display and EC 7054 graphical device are described. The system solves the following problems: represents apparatus spectra of nuclear radiations graphically by means of EC 7054 graphical device; makes ready starting approximated data for spectral line processing with special programs; performs graphical analysis of experimental spectra using GD-71 graphical display.

30997 **(ORNL/CSD—114) Numerical methods for large sparse linear least-squared problems.** Heath, M.T. (Oak Ridge National Lab., TN (USA)). Apr 1983. Contract W-7405-ENG-26. 23p. NTIS, PC A02/MF A01. Order Number DE83011062.

Large sparse least squares problems arise in many applications, including geodetic network adjustments and finite element structural analysis. Although geodesists and engineers have been solving such problems for years, it is only relatively recently that numerical analysts have turned attention to them. In this paper we present a survey of numerical methods for large sparse linear least squares problems, focusing mainly on developments since the last comprehensive surveys of the subject published in 1976. We consider direct methods based on elimination and on orthogonalization, as well as various iterative methods. The ramifications of rank deficiency, constraints, and updating are also discussed.

30998 (SAND—80-1654/2) Addendum to network analysis planning for project management: a Primer. Cronin, E. (Sandia National Labs., Albuquerque, NM (USA)). Mar 1983. Contract AC04-76DP00789. 21p. NTIS, PC A02/MF A01. Order Number DE83010214.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

This brochure is an Addendum to SAND80-1652. I have broken down into minute detail the different computer reports without repeating the instructions given in the Primer. The computer printouts that I deal with are textual and graphic. I am assuming that you are familiar with the network format and techniques described in the Primer, and this additional information will help you decide which reports may be of use to you. The main reports have already been described in the Primer; this addendum lists all possible reports and gives some examples to help you understand the format. After the textual are presented, I list alternatives available with the computer graphic reports. All computer graphic reports are plotted by an activity's expected completion date. Individual options for each computer graphic are listed so that you can select the one that fills your particular needs.

30999 (SAND—83-0085) Combinatorial optimization with Boolean constraints. Hulme, B.L.; Worrell, R.B. (Sandia National Labs., Albuquerque, NM (USA)). Feb 1983. Contract AC04-76DP00789. 24p. NTIS, PC A02/MF A01. Order Number DE83010387.

This report shows how Boolean algebraic formula manipulation can be used to solve certain kinds of optimization problems. If the problem can be formulated in terms of 0 to 1 variables and if the feasible solutions can be described by a Boolean equation, then the method of this report can be used. The method generates feasible solutions algebraically as terms of a disjunctive normal form of a Boolean function. Many small sample problems are solved to illustrate the method and the practical situations in which these optimization problems arise.

31000 (SAND—83-0091) ALPLASMA (aluminum plasma) and XRAD (x-radiation) computer program abstract. Iwan, D.C. (Sandia National Labs., Albuquerque, NM (USA)). Mar 1983. Contract AC04-76DP00789. 8p. NTIS, PC A02/MF A01. Order Number DE83008697.

Program ALPLASMA models the ion densities and K-shell x-radiation for a homogeneous, isothermal, isodense aluminum plasma. Program XRAD produces data for a spectral plot of the K-shell emission from the output of ALPLASMA. Both programs are designed for interactive use on a Digital Equipment Corporation VAX. However, all modeling is done under the control of the subroutine ALPLAS so that the computational model can be lifted away intact from the interactive main line. Only a few statements in the codes are other than ANSII Standard Fortran 77.

31001 (SAND—83-0464) GRAPH: an interactive digitizing and plotting program. Selleck, C.B. (Sandia National Labs., Albuquerque, NM (USA)). Mar 1983. Contract AC04-76DP00789. 67p. NTIS, PC A04/MF A01. Order Number DE83009702.

GRAPH is an interactive program that allows the user to achieve two objectives. The first is digitizing graphs or plots to create data files of points. The second is the inverse of the first: plotting graphs from data files onto a graphics device. The program has extensive internal help and is designed to allow the user to get results quickly and easily. It is written in RATFOR and is intended for use on a VAX computer. The program provides graphical output through all of the Sandia Virtual Device Interface (VDI) graphics devices.

31002 (SAND—83-0515) Global error estimates for ODEs based on extrapolation methods. Shampine, L.F.; Baca, L.S. (Sandia National Labs., Albuquerque, NM (USA)). Mar 1983. Contract AC04-76DP00789. 30p. NTIS, PC A02/MF A01. Order Number DE83010415.

It is shown how to exploit the powerful codes based on extrapolation of the midpoint rule so as to solve the initial value problem for a system of ordinary differential equations (ODEs) and to provide estimates of the global (true) error in the solution values. Particular attention is given to the reliability of the estimates and to the overall efficiency of the integration.

31003 (SAND—83-0732C) Extensions to the sparse matrix technique for automatic test generation. Acken, C.F. (Sandia National Labs., Albuquerque, NM (USA)). 1983. Contract AC04-76DP00789. 5p. (CONF-830344—1). NTIS, PC A02/MF A01. Order Number DE83010029.

From Automatic test generation workshop; San Francisco, CA, USA (15 Mar 1983).

This paper presents additional insight into the modeling of digital systems using a sparse matrix formulation. The set of primitives used in the original formulation of the matrix model is expanded to include CMOS transmission-gate configurations. The matrix model can be used to generate tests using the path sensitization approach. A covering approach for path selection and the use of testability measures in guiding test generation are discussed. A data structure for storing the sparse matrix to perform path sensitization is suggested. Two nonclassical approaches to ATG are proposed as research items.

31004 (UCID—19767) NLS: a system identification package for transient signals. Description and user's manual. Goodman, D.M. (Lawrence Livermore National Lab., CA (USA)). Mar 1983. Contract W-7405-ENG-48. 50p. NTIS, PC A03/MF A01. Order Number DE83009509.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

NLS is a system identification package designed specifically for determining difference-equation models for systems whose inputs and outputs are transients. In its present from the code is available only for a VAX 11/780 using the VMS operating system, but transporting it to a different system should not be difficult. I emphasize that this document is a preliminary edition describing a preliminary version of NLS. The purpose of this manual is to show potential users how to run NLS intelligently; it is not intended to be a treatise on system identification. We describe the particular methods used by NLS, but the user must be able to decide for himself if these methods apply to his particular problems. Much of the manual is devoted to explaining the various optimization methods employed by NLS so that the user will be able to select the parameters which control their behavior.

31005 (UCID—19779) Computer-aided engineering in NESD. Ames, H.S. (Lawrence Livermore National Lab., CA (USA)). 13 Apr 1983. Contract W-7405-ENG-48. 28p. NTIS, PC A03/MF A01. Order Number DE83011260.

To meet the challenge of developing increasingly complex electronic systems in the face of tighter budget constraints and manpower shortages, NESD, in conjunction with other divisions and the EE Department, has started to develop a computer-aided engineering (CAE) capability. Simply stated, the goal of CAE is to help engineers improve their productivity by using computers. The use of computers in engineering is certainly not new, but the widespread availability of computer resources will allow engineers to utilize computers for all facets of their work, including modeling and analyses, design, documentation, project management, software development, and communications.

31006 (UCRL—88958) Interactive tools for data exploration. Bly, S.A. (Lawrence Livermore National Lab., CA (USA)). 1983. Contract W-7405-ENG-48. 7p. (CONF-830324—4). NTIS, PC A02/MF A01. Order Number DE83009848.

From 15. symposium on the interface of computer science and statistics; Houston, TX, USA (16 Mar 1983).

Portions are illegible in microfiche products.

In complex data problems involving unknown structures and relationships, techniques which help analysts find features and characteristics of the data are particularly important. These techniques are useful predecessors to formal analysis methods. Computers have provided computational power to make a wide variety of such techniques available for data exploration. A computing facility with locator input, color graphics output, and audio output offers the basis for interactive data presentation tools. One such tool uses visual and aural representations of data to give the analyst a variety

of perspectives of the data. By combining user interactivity with various data output techniques, the analyst can dynamically explore complex data sets looking for patterns, structures, relationships, and features. With application to example data sets, this tool illustrates a means of data exploration.

31007 **(UIUCDCS-R—82-1103) ODE methods for the solution of differential/algebraic systems.** Gear, C.W.; Petzold, L.R. (Illinois Univ., Urbana (USA). Dept. of Computer Science). Sep 1982. Contract AC02-76ER02383. 57p. (COO—2383-0086; UILU-ENG—82-1727). NTIS, PC A04/MF A01. Order Number DE83010114.

In this paper we study the numerical solution of the differential/algebraic systems $F(t, y, y') = 0$. Many of these systems can be solved conveniently and economically using a range of ODE methods. Others can be solved only by a small subset of ODE methods, and still others present insurmountable difficulty for all current ODE methods. We examine the first two groups of problems and indicate which methods we believe to be best for them. Then we explore the properties of the third group which cause the methods to fail. We describe a reduction technique which allows systems to be reduced to ones that can be solved. It also provides a tool for the analytical study of the structure of systems.

31008 **(UIUCDCS-R—82-1116) Root finding in simulation and ODE solution.** Gear, C.W. (Illinois Univ., Urbana (USA). Dept. of Computer Science). Dec 1982. Contract AC02-76ER02383. 12p. (UILU-ENG—82-1743; COO—2383-0091). NTIS, PC A02/MF A01. Order Number DE83010995.

A simple implementation of an interpolation scheme for detecting a zero crossing of a sequence of function values is described. This has applications in continuous simulation and other situations involving integration in which a discontinuity or termiantion is triggered by the change of sign of a switching function and it is necessary to determine a close approximation to the value of time at which this change occurs. This technique has been coded in FORTRAN.

31009 **Maximum power signal restoration.** Trussell, H.J. (Los Alamos Scientific Lab., NM). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Acoustics, Speech and Signal Processing;* **ASSP-29**: No. 5, 1059-1061(Oct 1981). Contract W-7405-ENG-36.

A new method of signal restoration is presented for applications where the signal is a sparse, positive series of delta functions. The method is defined by solving the constrained maximization problem: maximize f/sup T/f subject to $f \geqq 0$ and $(g - Hf)^2 = (n)^2$. An algorithm to obtain the solution to this problem is given. Results are shown that demonstrate the successful application of this method.

31010 **One-dimensional random walk with phase transition.** Percus, O.E.; Percus, J.K. (New York Univ., New York). *SIAM (Society for Industrial and Applied Mathematics) Journal on Applied Mathematics;* **40**: No. 3, 485-497(Jun 1981). Contract AC02-76ER03077.

A random walk on a one-dimensional lattice is considered. The walk is asymmetric but with different asymmetry on the right and left halves of the line. As the parameter space describing the two asymmetries is covered, several qualitatively different distributions result: limiting distribution, unimodal diffusion and biomodal diffusion. The corresponding parameter space phase boundaries are obtained, as well as the precise form of the distributions.

31011 **Nested partitioning procedure for numerical multiple integration.** Friedman, J.H. (Stanford Linear Accelerator Center, CA); Wright, M.H. *ACM Transactions on Mathematical Software;* **7**: No. 1, 76-92(Mar 1981). Contract AC03-76SF00515;AM03-76SF00326.

An algorithm is presented for adaptively partitioning a multidimensional coordinate space on the basis of optimization of a scalar function of the coordinates. The goal is to construct a set of hyperrectangular regions, such that the variation of function values within each region is small. These regions are then used as the basis for a stratified sampling estimate of the definite integral of the function.

31012 **Graphics software: from techniques to principles.** Hatfield, L. (Lawrence Livermore National Lab., CA); Herzog, B. *Proceedings of the SID;* **22**: No. 2, 87-102(1981). Contract W-7405-ENG-48.

The development of graphics software is traced by considering important events in three areas. First, the development of techniques in graphics is examined by reviewing both a number of early applications and the principles and software that evolved from these applications. Second, the importance of algorithms is discussed. Historically important algorithms and current research areas are briefly outlined. Finally, the recent quest for standards in graphics software is examined. The history, major driving forces, and status of this quest are reviewed.

31013 **Set of staircase linear programming test problems.** Ho, J.K. (Brookhaven National Lab., Upton, NY); Loute, E. *Mathematical Programming;* **20**: 245-250(1981). Contract AC02-76CH00016.

A set of staircase linear programming test problems are made available for computational experiments.

31014 **(CONF-8110265—1) National Energy Software Center: what it is and what it has to offer.** Legan, M. (Argonne National Lab., IL (USA)). 1981. Contract W-31-109-ENG-38. 7p. NTIS, PC A02/MF A01. Order Number DE83008947.

From American Society of Civil Engineers fall meeting; St. Louis, MO, USA (26 Oct 1981).

Portions are illegible in microfiche products.

The National Energy Software Center, or NESC, is a software exchange and information center operated by Argonne National Laboratory for the US Department of Energy (DOE) and the Nuclear Regulatory Commission (NRC). Its major objectives are (1) promoting the sharing of computer software among agency offices and contractors to eliminate duplication of effort and unnecessary expenditures, (2) facilitating the transfer of computer applications and technology to the information processing community, and (3) arranging for software exchange with other government agencies and coordinating for DOE the acquisition of non-government software.

31015 **(DOE/TIC—4500(Rev.71)) Standard distribution for unclassified scientific and technical reports.** Nelson, R.N. (ed.). (Department of Energy, Oak Ridge, TN (USA). Technical Information Center). Mar 1983. 28p. NTIS, PC A03/MF A01. Order Number DE83005965.

This document contains the subject category Scope Notes used for the distribution of both hard copy reports and microfiche. Also included is each category's specified print run (noted in the Table of Contents) for contractors who provide the Technical Information Center printed copies of reports to disseminate to currently authorized standard distribution addressees. The number designates how many printed copies are required by the Technical Information Center to carry out the official distribution of scientific and technical reports to authorized standard distribution recipients.

31016 **(IAEA-TA—1854) Information services. Report to the Government of Peru.** Lasbo, P. (International Atomic Energy Agency, Vienna (Austria)). Jan 1982. 29p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE83701525.

At the request of the Government of Peru an IAEA staff member undertook an expert assignment to the Instituto Peruano de Energia Nuclear (IPEN) within the framework of a technical assistance project. The purpose of the expert's travel was to evaluate a request for equipment for and consultant's advice on the establishment of library and information services and to advise IPEN staff

on the establishment of the services. The report presents the findings on the present level and future need for library and information services and presents a proposal for the further development of these.

31017 **(UCRL—88736) On-line entry and analysis of computer center operations logs.** Frobose, R.H.; Wilgus, C.A. (Lawrence Livermore National Lab., CA (USA)). 1983. Contract W-7405-ENG-48. 11p. (CONF-830536—1). NTIS, PC A02/MF A01. Order Number DE83010613.

From Aesop operations managers' conference; Las Vegas, NV, USA (4 May 1983).

This paper describes the CLARET system (Computer Logging and RETrieval) developed at Lawrence Livermore National Laboratory to gather computer center operations information directly into an on-line data base. This system replaces a manual logging system with its attendant problems of illegibility and lack of standardization. Much attention has been devoted to the design of the data entry phase in order to make it both natural to use and yet sufficiently strict to ensure that the information complies with data base requirements. The resulting marriage between a highly interactive, screen-oriented front end and a data base system has provided the dual benefits of more complete information and greater flexibility in using that information. Distribution of the information has been similarly improved since not only are the logs automatically printed for normal distribution, but they can also be viewed from remote terminals both while in progress and after completion. Finally, the resultant data base is available to any computer user for viewing and analysis.

CORPORATE AUTHOR INDEX

In the Corporate Index, report literature is indexed using the name of the organization or institution responsible for issuing the report. Headings are provided for all report literature and for published literature for which a corporate approach is especially desirable, e.g., symposium and conference proceedings.

Each entry under a corporate heading gives the document title and the volume and abstract numbers. The document type, e.g., R for Report; country of publication, e.g., US; and language of the document, e.g., In German; are given in parentheses at the end of the entry. If no language statement appears, the language is English. Tables of document types and country of publication codes appear after the indexes.

DOE Energy Information Data Base: Corporate Author Entries (DOE/TIC-4585) is used in the standardization of corporate entries. DOE/TIC-4585 is available for purchase from the National Technical Information Service (NTIS), U. S. Department of Commerce, Springfield, Virginia 22161.

Intermediate photovoltaic system application experiment operational performance report for Lovington Square Shopping Center, Lovington, New Mexico for December 1982, 8:29341 (R;US)
Intermediate photovoltaic system application experiment operational performance report for CDC Light Manufacturing Bldg., San Bernadino, California for September 1982, 8:29344 (R;US)
Intermediate photovoltaic system application experiment operational performance report. Volume 8. For CDC Light Manufacturing Bldg., San Bernadino, California for October 1982, 8:29345 (R;US)
Intermediate photovoltaic system application experiment operational performance report for CDC Light Manufacturing Bldg., San Bernadino, California for November 1982, 8:29346 (R;US)

Intermediate photovoltaic system application experiment operational performance report. Volume 10. For CDC Light Manufacturing Bldg., San Bernardino, California for December 1982, 8:29347 (R;US)
Intermediate photovoltaic system application experiment operational performance report. Volume 8. For Oklahoma Center for Science and Arts, Oklahoma City, Oklahoma for December 1982, 8:29343 (R;US)

Boeing Computer Services Co., Tukwila, WA (USA)
Statistical analysis of cumulative shipper-receiver data, 8:29262 (R;US)

Boston Univ., MA (USA). Dept. of Chemistry
Study of intermediates from transition metal excited-state electron-transfer reactions. Progress report, August 1, 1981-March 31, 1983, 8:29285 (R;US)

Brigham Young Univ., Provo, UT (USA). Combustion Lab.
Basic combustion and pollutant-formation processes for pulverized fuels. Quarterly technical progress report No. 10, 1 January 1983-31 March 1983, 8:28968 (R;US)

British Gas Corp., London
Burner for gaseous fuel, 8:30166 (TG;GB)
Provisional amendment No. 2 to the inspection requirements for flexible gas meter connections, 8:29065 (TG;GB)

British Gas Corp., Newcastle-upon-Tyne
Inspection requirements for flexible gas-meter connections, 8:29064 (TG;GB)

Brookhaven National Lab., Upton, NY (USA)
Acceleration of heavy ions in the AGS, 8:30207 (R;US)
Beam-beam interactions in P-P colliding accelerators, 8:30179 (R;US)
Broadband accelerator control network, 8:30213 (R;US)
Calcium silicate cement sorbent for H_2S removal and improved gasification processes. Annual progress report, October 1, 1981-September 30, 1982, 8:28791 (R;US)
Charge exchange injection at the AGS, 8:30215 (R;US)
Classical estimates of the numbers of normal, local and stochastic states of polyatomic molecules as functions of energy: applications to H_2O, 8:30631 (R;US)
Concept of a solid-state drift chamber, 8:30274 (R;US)
Conversion of the AGS linac to H^- acceleration, 8:30214 (R;US)
Crevice corrosion of titanium alloy TiCode-12 in simulated rock salt brine at 150°C, 8:29886 (R;US)
Dissolution and passivation kinetics of Fe-Cr-Ni alloys during localized corrosion, 8:29864 (R;US)
End fields of CBA superconducting magnets, 8:30175 (R;US)
Field quality aspects of CBA superconducting magnets, 8:30176 (R;US)
Flash pyrolysis of biomass with reactive and non-reactive gases. Summary report, March 1982-March 1983, 8:29299 (R;US)
Free electron laser experiment at Brookhaven, 8:30252 (R;US)
High-energy gamma-ray beams from Compton-backscattered laser light, 8:30220 (R;US)
Identification of water requirements for selected enhanced oil recovery methods, 8:28989 (R;US)
Impact of energy and industrial pollution on public health, 8:29749 (R;US)
Incorporating oxidants in assessments of energy-related health effects, 8:29750 (R;US)
Internal trim coils for CBA superconducting magnets, 8:30208 (R;US)
Longitudinal instabilities with a non-harmonic rf potential, 8:30177 (R;US)
Magnetic properties of the iron laminations for CBA magnets, 8:30206 (R;US)
Microprocessor techniques and construction at the NSLS, 8:30209 (R;US)
Misuse of statistics in the interpretation of data on low-level radiation, 8:30472 (R;US)
Monte Carlo simulation of high p/sub T/ jets, 8:30666 (R;US)
Optimal timing of investments for industrial energy conservation, 8:29820 (R;US)
Power-supply regulation by microprocessor, 8:30211 (R;US)
Quench-protection studies on CBA magnets, 8:30205 (R;US)
Review of waste package verification tests. Semiannual report, April-September 1982, 8:29156 (R;US)
Safety research programs sponsored by Office of Nuclear Regulatory Research. Quarterly progress report, July 1-September 30, 1982, 8:29684 (R;US)
Single bunch transfer system for the National Synchrotron Light Source, 8:30216 (R;US)
SOCLIR: a system for optimal control of linear regulators, 8:30985 (R;US)
Some remarks on performance of very-high-energy colliders, 8:30253 (R;US)
Space charge limits in ESQ transport systems, 8:30178 (R;US)
Status of the AGS polarized negative-ion source, 8:30212 (R;US)
Status of the National Synchrotron Light Source, 8:30218 (R;US)
Study of air-pollution mixing heights and atmospheric turbulence over New York City - data report, 8:30330 (R;US)
Superconductivity and future accelerators, 8:30217 (R;US)
Tests for pulsed high-current heavy-ion synchrotron injection with an MP-Tandem Van de Graaff, 8:30219 (R;US)
Undulators as sources of synchrotron radiation, 8:30210 (R;US)
Variation of turbulence within the TIBL, 8:30323 (R;US)

Budd Co., Fort Washington, PA (USA). Technical Center
Glass/space frame solar-collector development, 8:29421 (R;US)

Bureau de Recherches Geologiques et Minieres (BRGM), 45 - Orleans (France)
Thermal behaviour of aquifer reservoirs for hot water storage or for low enthalpy geothermics, 8:29463 (R;FR;In French)

Bureau of Indian Affairs, Washington, DC (USA)
Proposed Navajo Railroad Project. Final environmental impact statement, 8:30397 (R;US)

Bureau of Land Management, Anchorage, AK (USA)
Final Environmental Impact Statement on oil and gas leasing in the National Petroleum Reserve in Alaska, 8:30398 (R;US)

C

California Inst. of Tech., Pasadena (USA)
Biological investigations of marine farms. Final report, July 1, 1976-December 31, 1979, 8:29302 (R;US)

California Univ., Berkeley (USA). Coll. of Engineering
Piping seismic test with energy-absorbing devices. Final report, 8:29542 (R;US)

California Univ., Berkeley (USA). Dept. of Chemical Engineering
Processing needs and methodology for contaminated water streams from synfuels processes, 8:28866 (R;US)

California Univ., Los Angeles (USA). Dept. of Chemistry
Metallocarboranes structurally engineered for the reduction of carbon monoxide, 8:28792 (R;US)
Metallocarboranes structurally engineered for the reduction of carbon monoxide, 8:28793 (R;US)

California Univ., Los Angeles (USA). Dept. of Earth and Space Sciences
Research in the geosciences related to resource assessment. Interim progress report, 8:30600 (R;US)

California Univ., Los Angeles (USA). Dept. of Materials Science and Engineering
Irradiation-induced precipitation in palladium-base alloys. Third annual progress report, May 1, 1980-January 31, 1981, 8:29889 (R;US)

California Univ., Los Angeles (USA). Dept. of Physics
UCLA Particle Physics Research Group annual progress report, 8:30665 (R;US)

California Univ., Los Angeles (USA). Lab. of Biomedical and Environmental Sciences
Screening human populations for chromosome damage. Progress report, March 1982-November 1982, 8:30474 (R;US)

California Univ., Santa Barbara (USA). Dept. of Chemical and Nuclear Engineering
Two-phase-flow characteristics during reflooding of a hot vertical tube. Final report, 8:29672 (R;US)

Cal Recovery Systems, Inc., Richmond, CA (USA)
Utilization of landfill gas for a vehicle fuel system: Rossman's Landfill, Clackamas County, Oregon. Feasibility study, 8:29851 (R;US)

CEA Centre d'Etudes de Bruyeres-le-Chatel, 92 - Montrouge (France)
SCAT2: a spherical optical model code, 8:30777 (R;FR;In French)

CEA Centre d'Etudes de Limeil, 94 - Villeneuve-Saint-Georges (France)
Study of thermal and suprathermal electron density fluctuations in a plasma Focus, 8:30846 (R;FR;In French)

CEA Centre d'Etudes Nucleaires de Cadarache, 13 - Saint-Paul-les-Durance (France)
Cavitation characterization by the acoustic method. Application to a pump model and to the primary pump of the Super Phenix fast reactor, 8:29580 (R;FR;In French)
Contribution to perfecting eddy current testing of steam generator tubes of sodium cooled breeders: description of the Monacault loop for the study of sodium deposit influence, 8:29579 (R;FR;In French)
Control rod experiments in Racine, 8:29618 (R;FR)
Effects of cell asymmetry on the performance of a large heterogeneous critical assembly, 8:29609 (R;FR)
Heterogeneity effects in Masurca rodlet cells, 8:29610 (R;FR)
Impact of core design on the fuel cycle of fast neutron reactors, 8:29578 (R;FR;In French)
Measurements of the Doppler effect at Phenix, 8:29577 (R;FR)
Particular characteristics of fast reactors: functional aspects and technological aspects, 8:29576 (R;FR;In French)
CEA Centre d'Etudes Nucleaires de Fontenay-aux-Roses, 92 (France)
Study of the origin of mercury present in the Papeete Lagoon (Tahiti, French Polynesia), 8:30355 (R;FR;In French)
Technical regulation and the standardization in French nuclear safety, 8:29594 (R;FR;In French)
CEA Centre d'Etudes Nucleaires de Grenoble, 38 (France)
Time-of-flight method for positron tomographic imaging and state-of-the-art of detector technology for emission tomography, 8:30304 (R;FR)
CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France)
Development of photocathodes for gas counters, 8:30275 (R;FR;In French)
"Fabrice" process for reconstituting experimental rods in a hot cell from pre-irradiated rods in power reactors, 8:29615 (R;FR;In French)
French LEU fuel for research reactor with emphasis on the Osiris experience of core conversion and reactor operation with the new fuel, 8:29622 (R;FR)
Introduction to the Jastrow theory of a dense Fermi system, 8:30663 (R;FR)
Study and use of the ion beams formed in the Focus experiment, 8:30933 (TG;US)
Central Maine Power Co., Augusta (USA)
Integrated gasification combined-cycle power plant at Sears Island, Maine: feasibility study. Final report. Volume I, 8:28809 (R;US)
Integrated gasification combined-cycle power plant at Sears Island, Maine: feasibility study. Final report. Volume II, 8:28810 (R;US)
Centre National de la Recherche Scientifique, 91 - Orsay (France). Lab. Aime Cotton
Studies of photoionization processes from ground-state and excited-state atoms and molecules, 8:30635 (R;US)
Centro Tecnico Aeroespacial, Sao Jose dos Campos (Brazil). Inst. de Atividades Espaciais
Comparative study of the systems for neutronics calculations used in Los Alamos Scientific Laboratory (LASL) and Argonne National Laboratory (ANL), 8:29611 (R;BR;In Portuguese)
Chicago Dept. of Planning, IL (USA)
Urban integrated industrial cogeneration systems analysis. Phase I, final report. Volume 2. Selecting and evaluating sites for integrated industrial cogeneration systems in the City of Chicago, 8:29847 (R;US)
Chicago Univ., IL (USA). Astronomy and Astrophysics Center
Underground neutrino astronomy, 8:30607 (R;US)
City Coll., New York (USA). Clean Fuels Inst.
Solids backmixing in high-velocity beds, 8:29049 (R;US)
Cold Regions Research and Engineering Lab., Hanover, NH (USA)
Energy conservation at the West Dover, Vermont, Water Pollution Control facility. Special report, 8:29836 (R;US)
Least life-cycle costs for insulation in Alaska, 8:29802 (R;US)
Suppression of ice fog from the Fort Wainwright, Alaska, cooling pond. Special report, 8:29525 (R;US)
Colorado Geological Survey, Denver (USA)
Bibliography of geothermal reports in Colorado. Bulletin 44, 8:29424 (R;US)
Deep-coal-bed methane potential of the San Juan River coal region, southwestern Colorado, 8:28879 (R;US)
Hydrogeology of the Dakota Group aquifer with emphasis on the radium-226 content of its contained ground water, Canon City Embayment, Fremont and Pueblo Counties, Colorado, 8:30391 (R;US)
Colorado Univ., Boulder (USA). Dept. of Chemical Engineering
Promoter modifications of catalytic activity and selectivity. Progress report, April 1, 1982-March 31, 1983, 8:29288 (R;US)
Columbia Engineers Service, Inc., Kennewick, WA (USA)
Experience with fuel damage from abnormal conditions in handling and transport, 8:29117 (R;US)
Columbia Univ., New York (USA). Dept. of Applied Physics and Nuclear Engineering
Neutron spectroscopy. Final report, 8:30775 (R;US)
Columbia Univ., New York (USA). School of Engineering and Applied Science
Creation of high-temperature plasma through the use of a superfast Z-pinch, 8:30849 (R;US)
Combustion Engineering, Inc., Windsor, CT (USA)
Evaluation and demonstration of methods for improved nuclear-fuel utilization. Fifth semi-annual progress report, January 1-June 30, 1982, 8:29599 (R;US)
Licensing applications and requirements of an ideal steady-state fuel-performance code. Final report, 8:29545 (R;US)
SPEAR-FCODE-GAMMA functional specifications. Final report, 8:29546 (R;US)
Commission of the European Communities, Brussels (Belgium). Directorate General for Science, Research and Development
Technical and economic feasibility of low-enthalpy geothermal projects in the E.E.C. Final report, 8:29469 (R;XE)
Commission of the European Communities, Luxembourg
Continuous mining system: stone and stone/coal headings, 8:28896 (R;XE)
Development of new and improved types of roadway support, 8:28894 (R;XE)
Ideal requirements of packs, 8:28897 (R;XE)
Integrated mechanization of winning, supporting and stowing in thick seams, 8:28895 (R;XE;In German)
Relationship between properties of coke oven blends and coke product, 8:28811 (R;XE)
The purification of coke-oven effluents, 8:28867 (R;XE;In Italian)
Up-grading of coal through hydrogenation, 8:28812 (R;XE;In German)
Cornell Univ., Ithaca, NY (USA)
Initial stages of oxidation of metals and alloys. Progress report, March 29, 1983, 8:29874 (R;US)
Cornell Univ., Ithaca, NY (USA). Lab. of Plasma Studies
Collective acceleration of ions using high-current relativistic-electron beams. Annual technical progress report, 8:30168 (R;US)
Corps of Engineers, Waltham, MA (USA). New England Div.
Investigation of tidal power, Cobscook Bay, Maine. Environmental Appendix, 8:29472 (R;US)
Creare, Inc., Hanover, NH (USA)
Thermal mixing in a model cold leg and downcomer at low flow rates, 8:29673 (R;US)
Curtiss-Wright Corp., Wood-Ridge, NJ (USA)
High temperature turbine technology program. Phase II. Technology test and support studies. Technical progress report, April 1, 1982-June 30, 1982, 8:29493 (R;US)
High Temperature Turbine Technology Program. Phase II. Technology test and support studies. Technical progress report, July 1, 1982-September 30, 1982, 8:29494 (R;US)
Curtiss-Wright Corp., Wood-Ridge, NJ (USA). Power Systems Div.
High Temperature Turbine Technology Program. Phase II. Technology test and support studies. Technical progress report, October 1, 1982-December 31, 1982, 8:29495 (R;US)
Test and evaluation of hot gas cleanup devices. Phase I and II. Task I. Technical progress report, October 1, 1982-December 31, 1982, 8:28865 (R;US)

Evaluation of Toshiba Type HS-2 fission chamber, 8:29572 (R;US)
HTGR Plant Technology Program. Semiannual report for the period ending September 24, 1982, 8:29571 (R;US)
Monitored retrievable storage of nuclear waste in the US, 8:29129 (R;US)
Peach Bottom test element program. Final report, 8:29570 (R;US)
Preliminary electron-cyclotron-heating results on Doublet III using an outside launch, 8:30901 (R;US)
General Accounting Office, Washington, DC (USA). Resources, Community and Economic Development Div.
Status of the Administration's implementation of the Energy Emergency Preparedness Act of 1982, 8:29053 (R;US)
General Electric Co., Lynchburg, VA (USA)
Extended Fuel-Burnup Program: cold critical measurement performed before Cycle 8 startup at Monticello reactor, 8:29539 (R;US)
General Electric Co., Schenectady, NY (USA). Corporate Research and Development Dept.
Evaluation of advanced technologies for power transformers. Final report, Part 2, June 1, 1979-June 30, 1981, 8:29528 (R;US)
Turbulent combustion experiments and modeling. Technical progress report, September 29, 1980-December 31, 1980, 8:30153 (R;US)
Turbulent combustion experiments and modeling. Technical progress report, July 2, 1981-September 30, 1981, 8:30155 (R;US)
Turbulent combustion experiments and modeling. Technical progress report, April 2, 1981-July 1, 1981, 8:30154 (R;US)
Turbulent combustion experiments and modeling. Technical progress report, March 29, 1982-June 27, 1982, 8:30158 (R;US)
Turbulent combustion experiments and modeling. Technical progress report, January 1, 1979-April 1, 1979, 8:30159 (R;US)
Turbulent combustion experiments and modeling. Technical progress report, July, 2 1979-September 30, 1979, 8:30160 (R;US)
Turbulent combustion experiments and modeling. Technical progress report, October 1, 1979-December 31, 1979, 8:30161 (R;US)
Turbulent combustion experiments and modeling. Technical progress report, January 1, 1980-March 30, 1980, 8:30162 (R;US)
Turbulent combustion experiments and modeling. Technical progress report, March 31, 1980-June 29, 1980, 8:30163 (R;US)
Turbulent combustion experiments and modeling. Technical progress report, June 30, 1980-September 28, 1980, 8:30164 (R;US)
Turbulent combustion experiments and modeling. Technical progress report, January 1, 1982-March 28, 1982, 8:30157 (R;US)
Turbulent combustion experiments and modeling. Technical progress report, October 1, 1981-December 31, 1981, 8:30156 (R;US)
General Electric Co., St. Petersburg, FL (USA)
Discharge modes at the anode of a vacuum arc, 8:30142 (R;US)
General Electric Co., St. Petersburg, FL (USA). Neutron Devices Dept.
Computer uses in vacuum equipment and processes, 8:30140 (R;US)
Influence of gap length on the field increase factor β, 8:30639 (R;US)
Thermal cycling and torque analysis of an ultrahigh-vacuum flange, 8:30139 (R;US)
General Electric Co., Sunnyvale, CA (USA). Advanced Reactor Systems Dept.
Gas-Cooled Thermal Reactor Program. Annual technical progress report for the period ending September 30, 1981, 8:29606 (R;US)

Gas-Cooled Thermal Reactor Program. Annual technical progress report for the period ending September 30, 1981, 8:29607 (R;US)
Method for reliability analysis of complex reactor systems, 8:29581 (R;US)

Geo-Centers, Inc., Newton Upper Falls, MA (USA)
Reduction in fuel consumption in internal combustion engines. Final report, 8:29857 (R;US)

Geokinetics, Inc., Salt Lake City, UT (USA)
Investigation of the geokinetics horizontal in-situ oil-shale retorting process. Sixth annual report, 1982, 8:29067 (R;US)

Geological Survey, Denver, CO (USA)
Deformation of evaporites near the Waste Isolation Pilot Plant (WIPP) site, 8:29162 (R;US)

Geological Survey, Menlo Park, CA (USA)
Principal facts of gravity stations with gravity and magnetic profiles from the southwest Nevada Test Site, Nye County, Nevada, as of January 1982, 8:30602 (R;US)

Georgia State Univ., Atlanta (USA). Dept. of Physics and Astronomy
Light particle and gamma ray emission measurements in heavy ion reactions. Progress report, 8:30759 (R;US)

Gesellschaft fuer Strahlen- und Umweltforschung m.b.H. Muenchen, Neuherberg (Germany, F.R.)
Biological indicators of radiation effects in man, 8:30475 (R;DE)

Ghent Rijksuniversiteit (Belgium). Lab. voor Elektronica en Meettechniek
Two-dimensional aspects of thin-film solar cells, 8:29315 (R;XE)

Gilbert Associates, Inc., Reading, PA (USA)
Parametric analysis of closed-cycle magnetohydrodynamic (MHD) power plants, 8:29780 (R;US)

GKSS-Forschungszentrum Geesthacht G.m.b.H., Geesthacht-Tesperhude (Germany, F.R.)
Absence of annealing twins in some austenitic steels during radiation-induced recrystallization, 8:29880 (R;DE)
Density of neutron irradiated and annealed amorphous $Fe_{40}Ni_{40}B_{20}$, 8:29879 (R;DE)
Uranium extraction from seawater, 8:29105 (R;DE;In German)

Glaverbel, Fleurus (Belgium)
Solar heating of plant's sanitary water. Final report, 8:29413 (R;XE;In English and French)

Goodwill Industries, Inc., St. Paul, MN (USA)
Solid waste disposal and heat recovery system, 8:29828 (R;US)

Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii
Compression of the thermonuclear fuel targets by charged particle beams. Part 2, 8:30904 (R;SU;In Russian)
Dependence of the tokamak chamber sputtering intensity on its cleaning technique, 8:30903 (R;SU;In Russian)
Helium migration in alpha-irradiated beryllium, 8:29881 (R;SU;In Russian)
Mass relations in systems of SU (n) symmetric particles with account for multiparticle forces, 8:30681 (R;SU;In Russian)
Model for investigating high-energy cascade by computer modelling, 8:30640 (R;SU;In Russian)
Tokamak-7 device structure, 8:30902 (R;SU;In Russian)

Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki
Differences in hadronic cross-sections and the residues of secondary reggeons in the quark-gluon model for strong interactions, 8:30687 (R;SU)
Dynamical model of the real part of the forward scattering amplitude, 8:30685 (R;SU)
Dynamics of the coupled quark and hadronic channels, 8:30688 (R;SU)
Functional equations, transformation groups and dynamical systems, 8:30827 (R;SU;In Russian)
Gasodynamical models of the type 2 supernovae, 8:30608 (R;SU;In Russian)
Loop equations in the theory of gravitation, 8:30817 (R;SU)
Neutrino properties and interactions (1977-1980). Multileptonic events, 8:30670 (R;SU;In Russian)
U(1)-problem, THETA-term and CP-violation, 8:30686 (R;SU)

Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Obninsk. Fiziko-Ehnergeticheskij Inst.
A2F computer code for data preparation to carry out group calculations by the Monte Carlo method on the basis of the ARAMAKO-2F system, 8:30790 (R;SU;In Russian)
Gravitational neutron spectrometer, 8:30278 (R;SU;In Russian)

Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij
Inclusive photoproduction of charmed hadrons in VMD, 8:30683 (R;SU)
Some classical effects in static spherically symmetric gravitational field in field gravitational theory, 8:30816 (R;SU;In Russian)

Grenoble-1 Univ., 74 - Annecy (France). Lab. de Physique des Particules
Rapidity spectra in proton-proton and proton-antiproton scattering up to 540 GeV in a dual parton model, 8:30697 (R;FR)

Grenoble-1 Univ., 38 (France)
Thermal behaviour of aquifer reservoirs for hot water storage or for low enthalpy geothermics, 8:29463 (R;FR;In French)

Grumman Aerospace Corp., Princeton, NJ (USA)
Monte Carlo studies of tandem mirror plasmas interacting with waves in the ion cyclotron range of frequencies (ICRF). Progress report, January 1, 1983-March 31, 1983, 8:30850 (R;US)

Gruy Petroleum Technology, Inc., Houston, TX (USA)
Drilling of a deviated well: E.C. Newell 10056-D Meigs County, Ohio, 8:29063 (R;US)

H

Hahn-Meitner-Institut fuer Kernforschung Berlin G.m.b.H. (Germany, F.R.). Bereich Datenverarbeitung und Elektronik
HMI scientific report 1981, 8:30993 (R;DE;In German)

Hanford Engineering Development Lab., Richland, WA (USA)
Engineering testing requirements in FED/INTOR, 8:30888 (R;US)

Harvard Univ., Cambridge, MA (USA). Energy and Environmental Policy Center
Non-regulatory and cost-effectiveness control of carcinogenic hazard. The beginnings: a methodology for using animal data to decrease uncertainty in human risk of carcinogens released by energy technologies, 8:30532 (R;US)

Hawaii Univ., Honolulu (USA). Dept. of Meteorology
Wind-energy assessment for the western Pacific based on ship reports, 8:29479 (R;US)

Heliodyne Ltd., Crawley, West Sussex (UK)
Development of low-cost cadmium sulfide sintered ceramic-ribbon solar cells for terrestrial applications, 8:29313 (R;XE)

Helipump Corp., Cleveland, OH (USA)
CNG acid-gas-removal process. Technical progress report No. 6, 1 February 1982-30 April 1982, 8:28802 (R;US)

Heriot-Watt Univ., Edinburgh (UK). Dept. of Physics
Thin-film amorphous silicon solar cells, 8:29311 (R;XE)

Hibbitt, Karlsson and Sorensen, Providence, RI (USA)
ABAQUS-EPGEN: a general-purpose finite element code. Volume 3. Example problems manual, 8:29670 (R;US)

Hodges, Vines, Fox and Associates, Little Rock, AR (USA)
Preliminary engineering report for Fort Smith refuse-derived energy project, 8:29850 (R;US)

Howard Univ., Washington, DC (USA). Dept. of Chemistry
Kinetic, magnetic and Moessbauer studies on porphyrin systems. Final report, 8:30040 (R;US)

Hughes Aircraft Co., Torrance, CA (USA). Electron Dynamics Div.
Development program for a 200-kW, c-w gyrotron. Quarterly report No. 12, April-June 1982, 8:30920 (R;US)
Development program for a 200-kW, c-w gyrotron. Quarterly report No. 13, July-September 1982, 8:30921 (R;US)

Hughes Research Labs., Malibu, CA (USA)
Indium phosphide/cadmium sulfide thin-film terrestrial solar cells. Final report, 1 September 1976-30 November 1978, 8:29303 (R;US)

Hungarian Academy of Sciences, Budapest. Central Research Inst. for Physics
Observation of solar radio bursts of type II and III at kilometer wavelengths from Prognoz-8 during STIP Interval XII. 10 April - 21 June 1981, 8:30611 (R;HU)

I

IIT Research Inst., Chicago, IL (USA)
Fatigue testing of low-cost fiberglass composite wind turbine blade materials, 8:29480 (R;US)
Illinois Inst. of Tech., Chicago (USA)
Study of diquark fragmentation into Λ and Y*+ nu n and nu p interactions, 8:30669 (R;US)
Illinois Inst. of Tech., Chicago (USA). Dept. of Mechanical Engineering
Urban integrated industrial cogeneration systems analysis. Phase I, final report. Volume 5. Technology assessment of cogeneration and alternative fuels in Chicago, 8:29848 (R;US)
Illinois State Geological Survey, Champaign (USA)
Perspectives in geology. Circular 525, 8:30594 (R;US)
Illinois Tool Works, Inc., Elgin (USA). Venture Group
Ion-plating of solar-cell arrays encapsulation task: LSA Project 32. Final report, 8:29304 (R;US)
Illinois Univ., Chicago (USA)
Dynamic polarization in some high-hydrogen glasses, 8:30002 (R;US)
Illinois Univ., Chicago (USA). Dept. of Materials Engineering
Chlorination of cobalt in an argon-1% oxygen-1% chlorine mixture at 1000°K, 8:29876 (R;US)
High-temperature corrosion of metals in argon-oxygen-chlorine mixture, 8:29875 (R;US)
Illinois Univ., Chicago (USA). Dept. of Medicinal Chemistry
Synthesis of new prophylactic antiradiation drugs. Progress report no. 2 (annual), 1 Aug 80-31 Jul 81, 8:30038 (R;US)
Illinois Univ., Urbana (USA). Dept. of Computer Science
General purpose PDP-11 interface processor, 8:30992 (R;US)
ODE methods for the solution of differential/algebraic systems, 8:31007 (R;US)
Root finding in simulation and ODE solution, 8:31008 (R;US)
Institute of Electrical and Electronics Engineers, Inc., New York (USA)
1981 NRC/BNL/IEEE standards workshop on human factors and nuclear safety. The man-machine interface and human reliability: an assessment and projection, 8:29682 (R;US)
Institute of Nuclear Research, Warsaw (Poland)
Interface unit for the Y-time mode registrator, 8:30306 (R;PL;In Polish)
Reactor Power Meter type SG-8, 8:29623 (R;PL;In Polish)
Institut Francais du Petrole (IFP), 92 - Rueil-Malmaison
Integro-variational formulation for interior and exterior problems of linear hydrodynamics, 8:28987 (R;FR;In French)
Interpolation and transformation of maps, 8:30601 (R;FR;In French)
Instituto de Pesquisas Energeticas e Nucleares, Sao Paulo (Brazil)
Preparation of a sup(99m) Tc generator for use in nuclear medicine, using calcinated (1000°C) alumina as an adsorber for ^{99}Mo, 8:30445 (R;BR;In Portuguese)
Instituto Militar de Engenharia, Rio de Janeiro (Brazil)
Numerical methods to solve the two-dimensional heat conduction equation, 8:30130 (R;BR;In Portuguese)
International Atomic Energy Agency, Vienna (Austria)
Information services. Report to the Government of Peru, 8:31016 (R;XA)
International Bank for Reconstruction and Development, Washington, DC (USA)
Shadow pricing and power tariff policy. Staff working paper, 8:29516 (R;US)
International Centre for Theoretical Physics, Trieste (Italy)
Effect of scalar partons at short distances in unified theories with spontaneouly broken colour symmetry, 8:30708 (R;IT)
Few-body system and particle resonances, 8:30682 (R;IT)
International Engineering Co., Inc., Darien, CT (USA)
Study of the interrelationships between minimum flow release policies and hydroelectric power development in New England. Final report, 8:29294 (R;US)
International Inst. for Applied Systems Analysis, Laxenburg (Austria)
Resources and economic assessment of centralized and decentralized solar-electric systems. Final report, 8:29337 (R;US)
International Project in the Field of Food Irradiation, Karlsruhe (Germany, F.R.)
In vivo mutagenicity studies in rats mice and Chinese hamsters fed irradiated foodstuffs - chicken, fish, dates, pulses, mangoes and cocoa beans, 8:30452 (R;DE)
INTEVEP, Filial de Petroleos de Venezuela, SA, Caracas
Polycrystalline-diamond drill bits for Venezuelan oil-field application, 8:28993 (R;US)
Iowa State Univ. of Science and Technology, Ames (USA)
Very high energy gamma ray astrophysics, 8:30606 (R;US)

J

Japan Atomic Energy Research Inst., Tokyo
Applicability of three dimensional diffusion theory programmes based on coarse mesh methods to calculating nuclear characteristics of fast breeder reactors, 8:29587 (R;JP;In Japanese)
Countermeasure for unneutralized ion beam in JT-60 NBI against the leakage magnetic field from JT-60, 8:30905 (R;JP;In Japanese)
Development of partitioning method - cold and semihot experimental works with partitioning testing apparatus, 8:29130 (R;JP;In Japanese)
Engineering data of seamate:II, 2. Test on the characteristics of temperature regulation in the pressure vessel, 8:29676 (R;JP;In Japanese)
Estimation of fuel temperature increase during coolant boiloff accident, 8:29677 (R;JP;In Japanese)
Immobilization of yeast cells with hydrophilic carrier by radiation-induced polymerization, 8:30492 (R;JP;In Japanese)
Light water reactor and polymeric materials, 8:29549 (R;JP;In Japanese)
Model for calculating the optimal replacement interval of computer systems, 8:30995 (R;JP;In Japanese)
Multi-rod burst test under a loss-of-coolant accident condition, (2). Experimental result of the bundle No.7806, 8:29675 (R;JP;In Japanese)
Shielding analysis on spent fuel transport cask by RADHEAT-V3 code system, 8:30101 (R;JP;In Japanese)
Studies on closed-cycle processes for hydrogen production, 5. Progress report for the F.Y. 1980, 8:29286 (R;JP;In Japanese)
Joint Inst. for Nuclear Research, Dubna (USSR)
Charged particle multiplicity distribution in anti pp interactions at 22.4 GeV/c, 8:30671 (R;SU)
Joint Inst. for Nuclear Research, Dubna (USSR). Dept. of New Acceleration Methods
Reflection intensities of photons in the n-th diffraction order for crystal planes of quartz. LiF, Ge and Si, 8:29931 (R;SU;In Russian)
Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Computing Techniques and Automation
Existence in Rsup(n) of positive solution of Derechlet problem for one nonlinear elliptic equation, 8:30828 (R;SU;In Russian)
Existence of positive solutions in the Lindner-Fedyanin model, 8:30808 (R;SU;In Russian)
Generalized Hamilton-Jacobi theory for particles with intrinsic angular momentum, 8:30818 (R;SU;In Russian)
New exactly solvable systems of differential-difference equations, 8:30810 (R;SU;In Russian)
Organization of the processed event catalogue on the basis of direct access files, 8:30283 (R;SU;In Russian)
Particle-like solutions in some models of nonlinear physics, 8:30809 (R;SU;In Russian)
Problems of the theory of light nucleus inelastic interactions, 8:30779 (R;SU;In Russian)
Program package for creation and updating of the processed events catalogue, 8:30284 (R;SU;In Russian)
Relativistic model of diffraction scattering, 8:30692 (R;SU;In Russian)
Solution of high order of accuracy of the Sturm-Liouville partial problem for a system of differential equations of a special type, 8:30819 (R;SU;In Russian)

Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy
Design, technology of preparation and testing of polycarbonate track sensitive target, 8:30286 (R;SU;In Russian)
Inelastic interactions of p, d, ^{4}He and ^{12}C projectiles with light (CNO) and heavy (AgBr) nuclei at 4.5 GeV/c per nucleon, 8:30737 (R;SU)
Investigation of inhomogeneities of synchrophasotron magnetic field. On the low intensity beam dynamics, 8:30185 (R;SU;In Russian)
Search for cumulative eta mesons in the πsup(-)Cu→eta(180deg)X reaction at 3.8 GeV/c, 8:30672 (R;SU;In Russian)
Software for real time system of the DISK-2 spectrometer for investigation of cumulative particle production, 8:30285 (R;SU;In Russian)
Thermal conductivity of niobium-titanium alloys in mixed state, 8:29882 (R;SU;In Russian)
Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Neutron Physics
Spin, masses and anomalous magnetic moments of charged leptons (the ring model), 8:30693 (R;SU;In Russian)
Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Problems
Characteristics of half-meter drift chambers operating in self-quenching streamer mode, 8:30290 (R;SU;In Russian)
GRANAS system for graphic analysis of nuclear spectrometrical data, 8:30996 (R;SU;In Russian)
Hyperfine energy level structure of the Dμ mesoatom and DDμ mesomolecule and kinetics of mesomolecular processes in deuterium, 8:30642 (R;SU;In Russian)
Investigation of gas gain in a proportional chamber, 8:30287 (R;SU;In Russian)
Reference system of the relativistic ionization streamer chamber. Pt. 1. Description of the reference system, 8:30281 (R;SU;In Russian)
Setup for pion inverse electroproduction on protons and nuclei, 8:30289 (R;SU;In Russian)
Study of the Earth structure by neutrino experiments, 8:30610 (R;SU;In Russian)
System of half-meter drift chambers operating in a self-quenching operation mode, 8:30288 (R;SU;In Russian)
Systematic errors in polarization measurements of polarized proton targets by the Q-meter method, 8:30308 (R;SU;In Russian)
Three-level system for spectrometric data acquisition, processing and analysis, 8:30282 (R;SU;In Russian)
Verification of the hypothesis of Regge trajectory factorization in $\pi^- p \to \pi^+ (\pi^- \pi^0) + X$ reactions at 5 GeV/c, 8:30689 (R;SU;In Russian)
Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Reactions
8-input doublet analogue multiplexer, 8:30307 (R;SU;In Russian)
Kinematics of products of two complex nuclei tangential interaction, 8:30780 (R;SU;In Russian)
Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics
Charge screening effects in mesic molecules of hydrogen isotopes, 8:30641 (R;SU;In Russian)
Conformally invariant gauge fixing condition in quantum electrodynamics, 8:30712 (R;SU;In Russian)
Determination of maximum neutron dose equivalent in the 10^{-9}-25 MeV energy range using thermal neutron detector with two moderators, 8:30806 (R;SU;In Russian)
Dynamics of generalized coherent states. Pt. 2. Classical equations of motion, 8:30711 (R;SU)
Higher order corrections for the running coupling constant of QCD and an effective potential of the one-gluon exchange in t- and s-channels, 8:30691 (R;SU)
Magnetic excitation damping in heavy rare earth metals, 8:29883 (R;SU;In Russian)
Quantum symmetries in particle interactions, 8:30714 (R;SU;In Russian)
Renormalization and short-distance properties of gauge invariant gluonium and hadron operators, 8:30690 (R;SU)
System of related massless dipole ghost fields in two space-time dimensions, 8:30710 (R;SU)
Vacuum energy in the Ysub(d) Yukawa model in the strong coupling limit, 8:30713 (R;SU;In Russian)
Joint Publications Research Service, Arlington, VA (USA)

E-field-ratio telluric techniques applied to cavity detection for OSI operations, 8:30322 (R;US)
Electrical energy and cost for the Mirror Fusion Test Facility, 8:30926 (R;US)
Electromagnetic pumping of liquid lithium in inertial confinement fusion reactors, 8:30928 (R;US)
Energy and Technology Review, 8:30319 (R;US)
H-Division. Materials Physics quarterly report, October-December 1982, 8:29888 (R;US)
Identification of antenna parameters from time-domain pulse-response data, 8:30302 (R;US)
Interactive tools for data exploration, 8:31006 (R;US)
Mechanical properties of vapor-deposited thin metallic films: a status report, 8:29264 (R;US)
Microwave energy storage in resonant cavities, 8:30106 (R;US)
NLS: a system identification package for transient signals. Description and user's manual, 8:31004 (R;US)
On-line entry and analysis of computer center operations logs, 8:31017 (R;US)
Options to upgrade the Mirror Fusion Test Facility, 8:30927 (R;US)
Organic and pyritic sulfur determination in oil shale, 8:29074 (R;US)
Overview and direction in the tandem mirror program, 8:30932 (R;US)
Power deposition profiles in Maxwellian magneto-active plasmas, 8:30867 (R;US)
Rapid disappearance of shell effects in the fission of transfermium nuclei, 8:30776 (R;US)
Regional Seismic Test Network site descriptions, 8:30599 (R;US)
Residual and heavy-oil recovery using directionally drilled wells, 8:28995 (R;US)
Scaling of laser-plasma interactions with laser wavelength and plasma size, 8:30929 (R;US)
Tandem mirrors for neutron production, 8:30931 (R;US)

Leeds and Northrup Co., North Wales, PA (USA)
Detailed conceptual design of a high-temperature CO_2 sensor for geothermal applications. Final report, Task I, 8:29439 (R;US)

Lehigh Univ., Bethlehem, PA (USA). Materials Research Center
Small-angle neutron scattering from polystyrene-DVB networks containing a delta fraction of deuterated polystyrene: evidence for aggregation during polymerization, 8:29948 (R;US)

Letterman Army Inst. of Research, San Francisco, CA (USA)
Annual research progress report, FY 1980. Annual report 1 Oct 79-30 Sep 80, 8:30581 (R;US)
Basal body and striated rootlet changes in primate macular retinal pigmented epithelium after low level diffuse argon laser radiation. Final report 1981-1982, 8:30580 (R;US)

Linhardt and Associates, Inc., Newport Beach, CA (USA)
Design and development of a high-velocity wedge separator for particle removal in coal-gasification plants. Quarterly report, October 1-December 31, 1982 and technical progress and Phase IV report, 8:28800 (R;US)

Little (Arthur D.), Inc., Cambridge, MA (USA)
Engineering assessment of TEG and TEG/FC technology growth potential. Phase I. Engineering assessment of existing thermoelectric generator technology. Final report Jun-Sep 81, 8:29781 (R;US)

Lockheed Missiles and Space Co., Palo Alto, CA (USA). Research Labs.
Rechargeable alkaline zinc/ferricyanide battery, Phase III. Final report, 26 October 1981-18 September 1982, 8:29789 (R;US)

Los Alamos National Lab., NM (USA)
Accretion disks, 8:30612 (R;US)
ANTHEM: a two-dimensional multicomponent self-consistent hydro-electron transport code for laser-matter interaction studies, 8:30913 (R;US)
Assembly and installation of the 2 MeV FMIT accelerator, 8:30909 (R;US)
Cataclysmic variables as probes of x-ray properties of interstellar grains, 8:30619 (R;US)
Compact fusion reactors, 8:30911 (R;US)
Computer modeling of the klystron, 8:30235 (R;US)
Controlled air incinerator for radioactive waste. Volume I. Rationale, process, equipment, performance, and recommendations, 8:29131 (R;US)
Controlled air incinerator for radioactive waste. Volume II. Engineering design references manual, 8:29132 (R;US)
Convective transport in laser target plasmas, 8:30907 (R;US)
Cosmological and astrophysical implications of magnetic monopoles, 8:30613 (R;US)
Criteria for vacuum breakdown in rf cavities, 8:30145 (R;US)
Data-acquisition software for the LAMPF control system, 8:30231 (R;US)
Delta Scuti variables. Lecture 6, 8:30614 (R;US)
Development of high-speed microchannel photomultiplier, 8:30309 (R;US)
Development of the two-dimensional cross-section sensitivity and uncertainty analysis code SENSIT-2D with applications to the FED, 8:30914 (R;US)
Disk-and-washer linac structure with biperiodic T supports, 8:30170 (R;US)
Emittance scanner for intense low-energy ion beams, 8:30189 (R;US)
Errors in radio-frequency quadrupole structures, 8:30187 (R;US)
Evaporative-cooling potential for office buildings, 8:29804 (R;US)
FMIT accelerator, 8:30226 (R;US)
Graphite targets at LAMPF, 8:30240 (R;US)
High-efficiency free-electron laser results, 8:30118 (R;US)
Hyperon and hypernuclear physics with intense beams, 8:30696 (R;US)
Imagescope to photodiode beam-profile imaging system, 8:30227 (R;US)
Intense ion ring acceleration in a flux-compressing liner, 8:30193 (R;US)
Introduction to multidimensional combustion modeling with the CONCHAS-SPRAY computer program, 8:30095 (R;US)
150-kW, 450-MHz gyrocon rf generator, 8:30144 (R;US)
Laser photoionization of H^0 beams for charge-changing injection, 8:30233 (R;US)
Linear nonradial pulsation theory. Lecture 7, 8:30615 (R;US)
Los Alamos integrated oil shale health and environmental program. Status report II, 8:29093 (R;US)
Los Alamos Proton Storage Ring (PSR) injection deflector system, 8:30228 (R;US)
Los Alamos science. Volume 4, No. 7, 8:30980 (R;US)
Mechanical features of the ATS RFQ linear accelerator, 8:30171 (R;US)
Modular stellarator reactor conceptual design study, 8:30912 (R;US)
Moment approach to charged particle beam dynamics, 8:30188 (R;US)
Monitor 1983, 8:30239 (R;US)
Multiphoton laser-induced-fluorescence studies of simple species, 8:30644 (R;US)
Multiphoton-induced fluorescence and ionization of $B^1\Sigma^+$ carbon monoxide, 8:30643 (R;US)
Nonlinear hydrodynamics. Lecture 9, 8:30616 (R;US)
Operating characteristics of a 2.0-MeV RFQ, 8:30186 (R;US)
Optical engineering at Los Alamos: a history, 8:30105 (R;US)
Performance tests of the 600-kW, cw, 80-MHz, radio-frequency systems for the FMIT accelerator, 8:30232 (R;US)
PHERMEX electron gun development, 8:30238 (R;US)
Positrons from supernova and the origin of the galactic-center positron-annihilation radiation, 8:30618 (R;US)

Progress in uv damage testing at Los Alamos, 8:30102 (R;US)
Proton Storage Ring control system, 8:30255 (R;US)
Prototype phase and amplitude feedback-control systems for the FMIT accelerator, 8:30169 (R;US)
Pulsed air-core deflector-magnet design parameters, 8:30224 (R;US)
Pulsed beam chopper for the PSR at LAMPF, 8:30229 (R;US)
Radiation-hardened field coils for FMIT quadrupoles, 8:30236 (R;US)
Radio-frequency quadrupole vane-tip geometries, 8:30191 (R;US)
Rapidly tuned buncher structure for the Los Alamos Proton Storage Ring (PSR), 8:30254 (R;US)
Reaction of fluorine and chlorine atoms with formaldehyde and deutero-formaldehyde, 8:30041 (R;US)
Regulator to control current sharing among parallel-connected power transistors, 8:30143 (R;US)
rf system for the Los Alamos free-electron laser (FEL), 8:30230 (R;US)
Self-trapping electron-ring accelerators, 8:30194 (R;US)
Sequential bunch extractions in the Los Alamos PSR, 8:30234 (R;US)
Solution to the transverse-phase-space time-dependence problem with LAMPF's high-intensity H^+ beam, 8:30192 (R;US)
Spacecraft charging and related effects during Halley encounter, 8:30620 (R;US)
Status of tritium technology development for magnetic-fusion energy, 8:30915 (R;US)
Stereo: cylindrical drift chamber for muon decay experiments at LAMPF, 8:30291 (R;US)
Streak camera aperature function, 8:30104 (R;US)
Structural-design considerations for the FED 50-kA equilibrium field coils, 8:30910 (R;US)
Subharmonic triple buncher for a high-efficiency free-electron laser, 8:30117 (R;US)
Supergiant radial and nonradial pulsations. Lecture 10, 8:30617 (R;US)
Three-dimensional field program, 8:30190 (R;US)
Time-jitter reduction on the rf buncher signal for the Los Alamos Proton Storage Ring (PSR), 8:30225 (R;US)
Tritium monitoring within the reactor hall of a DT fusion reactor, 8:30908 (R;US)
Use of lasers at the Los Alamos Hot-Cell Facility, 8:30103 (R;US)
WATCH1 and the WATCH3 programs: vehicles for interpreting chemical analyses of geothermal water. A guide for users, 8:29471 (TG;US)
Wide-bandwidth test fixture for electromagnetic-beam sensors, 8:30237 (R;US)

Lund Univ. (Sweden). Fysiska Institutionen
Disintegration of Nuclei in Violent Heavy Ion Interactions at 55A MeV - 110A MeV, 8:30760 (R;SE)
Sewage sludge as a sensitive indicator for airborne radionuclides from nuclear power plants. Studies of distribution and behaviour of activation products in the terrestrial environment, 8:29621 (R;SE)

Lyon-1 Univ., 69 (France)
Relativistic aspects of scalar fields (on some bases of wave mechanisms), 8:30717 (R;FR;In French)
Study of gold diffusion in thin-film glass semiconductor $GeTe_4$ by nuclear methods, 8:29956 (R;FR;In French)

Lyon-1 Univ., 69 - Villeurbanne (France). Inst. de Physique Nucleaire
Relativistic aspects of scalar fields (on some bases of wave mechanisms), 8:30717 (R;FR;In French)
Study of gold diffusion in thin-film glass semiconductor $GeTe_4$ by nuclear methods, 8:29956 (R;FR;In French)

Yale Univ., New Haven, CT (USA)
Studies of photoionization processes from ground-state and excited-state atoms and molecules, 8:30635 (R;US)

PERSONAL AUTHOR INDEX

Authors' surnames are indexed in the form appearing in the abstracted publication; given names are reduced to initials. Each author entry gives the publication title and the citation number. The document type, e.g., R for Report; country of publication, e.g., US; and language of the document, e.g., In German; are given in parentheses at the end of the entry. If no language statement appears, the language is English. Tables of document types and country of publication codes appear after the indexes. For publications with multiple authors, an entry is provided for each author. Entries for the second and succeeding authors give references to the first author.

Because of problems involved in the mechanical preparation of this index, all accent marks are omitted. Changes in spelling introduced as a result of accent omission follow standard conventions.

SUBJECT INDEX

The subject index is based on the use of subject descriptors selected from a controlled thesaurus of terms (DOE/TIC-7000). Subject descriptors and qualifiers (subheadings) are selected and presented in the following format:

SUBJECT DESCRIPTOR
Qualifier
Title, (supplementary information), citation number, (R:US)

The notations in the final parentheses indicate the type of document, e.g., R for Report; the country of publication, e.g., US; and the language if other than English, e.g., In German. Tables of document types and country of publication codes appear after the indexes.

The title may be supplemented with additional words, or a phrase, if it appears additional information would be helpful. In cases for which the title contains little or no information related to the subject entry, it may be replaced entirely by the supplementary information. A qualifier is not always required, and in such cases the title will follow the unqualified subject descriptor.

The descriptors selected for use as subject terms are generally the names of specific materials, things, or processes. To the extent possible, a qualifier is selected to describe the properties of, or processes applied to, the subject term.

Index entries are selected to indicate the important ideas and concepts presented in a document, rather than words that may appear in the text. Within the available thesaurus terms, the most probable or logical place to look for typical information is selected. "See references" are included to guide users from synonymous terms or phrases to the descriptor selected as a subject heading for the concept. (e.g. Pipeline Quality Gas see HIGH BTU GAS). "See also references" are used to indicate where to find references to subject concepts that are narrower, broader, or related to a particular subject heading. To complete an exhaustive search of a given subject, all such headings should be reviewed. Copies of DOE/TIC-7000, the Subject Thesaurus, are available from the National Technical Information Service (NTIS), U. S. Department of Commerce, Springfield, VA 22161.

Fine particles and precipitation: some case studies, 8:30333 (R:US)
Optical Properties
Satellite measurements of atmospheric aerosols. Annual report 1 Oct 81-30 Nov 82, 8:30329 (R:US)
Particle Kinematics
Size effects in aerosol particle interactions: the Van der Waals potential and collision rates, 8:30328 (J:NL)
AGR TYPE REACTORS
Spent Fuels
Fuel inventories and derived parameters for the reactor systems CDFR, LWR, AGR and MAGNOX, 8:29598 (R:GB)
AGRICULTURE
Equipment
World energy crisis, 8:29766 (RA:US)
AIR FLOW
Mathematical Models
Numerical model study of turbulent airflow in and above a forest canopy, 8:30325 (J:JP)
AIR HEATERS
See also SOLAR AIR HEATERS
Design
Design of a 6- by 6-foot coal-fired heater for a CCGT air heater, 8:29520 (J:US)
AIR POLLUTION
See also INDOOR AIR POLLUTION
Altitude
Study of air-pollution mixing heights and atmospheric turbulence over New York City - data report, 8:30330 (R:US)
Health Hazards
Impact of energy and industrial pollution on public health, 8:29749 (R:US)
Mixing
Study of air-pollution mixing heights and atmospheric turbulence over New York City - data report, 8:30330 (R:US)
AIR POLLUTION CONTROL
Use this term for items that involve the removal or management of pollutants after they are formed by a source.
Data Acquisition Systems
Telemetric imission system TEMES, 8:30335 (R:DE:In German)
On-Line Measurement Systems
Telemetric imission system TEMES, 8:30335 (R:DE:In German)
Planning
Economic assessment of Best Available Treatment and Best Conventional Treatment Waivers for selected industries. Final report, 8:30349 (R:US)
Pollution Regulations
California Energy Commission policy affiliation (California), 8:29767 (RA:US)
AIR POLLUTION MONITORS
Quantitative determination of alpha-quartz in airbone dust samples by X-ray diffraction, 8:30334 (R:ES:In Spanish)
Design
Coal gasification and fluidized bed combustion, 8:30313 (J:US)
AIR PREHEATERS
See AIR HEATERS
AIR QUALITY
Monitoring
Environmental evaluation of the University of Minnesota-Duluth coal gasifier, 8:28874 (R:US)
AIRBORNE PARTICLES
See PARTICULATES
AIRBORNE PARTICULATES
See PARTICULATES
ALAP
See RADIATION PROTECTION
ALARM DOSEMETERS
See RADIATION MONITORS
ALASKA
Baseline Ecology
Environment of Cape Thompson region, Alaska, 8:30375 (R:US)
Coal Deposits
Alaska's coal resources (Major coal fields described in detail), 8:28876 (RA:US)
Joint venture opportunities in Alaskan coal development, 8:28877 (RA:US)
Rail transport of Alaskan coal, 8:28907 (RA:US)
Taxing Alaskan oil, 8:28984 (RA:US)

Coal Industry
Alaska coal marketing conference: proceedings, 8:28971 (R:US)
Alaska-environmental policies related to coal mining, 8:28883 (RA:US)
Alaska-labor policies, 8:28973 (RA:US)
Alaska's competitors in the Pacific steam coal market, 8:28886 (RA:US)
Legislative priorities for coal development in Alaska, 8:28975 (RA:US)
Coal Mines
Alaskan coal projects and development plans, 8:28884 (RA:US)
International financing of Alaska coal ventures, 8:28976 (RA:US)
Joint venture opportunities for the development of Alaska coal resources, 8:28885 (RA:US)
Coal Reserves
Alaska's coal resources (Major coal fields described in detail), 8:28876 (RA:US)
Government Policies
Legislative priorities for coal development in Alaska, 8:28975 (RA:US)
Harbors
Rail transport of Alaskan coal, 8:28907 (RA:US)
Mining Laws
Alaska-environmental policies related to coal mining, 8:28883 (RA:US)
Natural Gas Deposits
Final Environmental Impact Statement on oil and gas leasing in the National Petroleum Reserve in Alaska, 8:30398 (R:US)
Petroleum Deposits
Final Environmental Impact Statement on oil and gas leasing in the National Petroleum Reserve in Alaska, 8:30398 (R:US)
Taxing Alaskan oil, 8:28984 (RA:US)
Railways
Rail transport of Alaskan coal, 8:28907 (RA:US)
Terminal Facilities
Impact of ocean transportation and ports on the marketing of Alaskan coal in the Pacific Rim, 8:28908 (RA:US)

ALCATOR DEVICE
High-Frequency Heating
Effect of wall corrugations on lower-hybrid-wave launching and reflection, 8:30894 (R:US)
ICR Heating
Numerical investigation of ICRF antenna designs and heating schemes for Alcator C, 8:30893 (R:US)
Microwave Equipment
Numerical investigation of ICRF antenna designs and heating schemes for Alcator C, 8:30893 (R:US)
Neutron Spectrometers
D-D fusion neutron-spectra measurements and ion-temperature determination at Alcator C, 8:30851 (R:US)
RF Systems
Lower-hybrid heating and current drive in tokamaks and related experiments, 8:30973 (BA:XA)

ALCOHOLS
See also BUTANOLS
ETHANOL
GLYCOLS
HEXANOLS
METHANOL
PENTANOLS
PROPANOLS
Gas Chromatography
Identification by gas-liquid chromatography-mass spectrometry of low-molecular-weight products from the aqueous alkaline degradation of cellulose, 8:30061 (J:NL)
Liquid Column Chromatography
Identification by gas-liquid chromatography-mass spectrometry of low-molecular-weight products from the aqueous alkaline degradation of cellulose, 8:30061 (J:NL)
Mass Spectroscopy
Identification by gas-liquid chromatography-mass spectrometry of low-molecular-weight products from the aqueous alkaline degradation of cellulose, 8:30061 (J:NL)
Polymerization
Furfuryl alcohol cellular product, 8:29811 (P:US)
Thermal Conductivity
Thermal conductivity measurements and molecular association in a series of alcohol vapors: methanol, ethanol, isopropanol, and t-butanol (Temperature and pressure dependence), 8:29292 (J:US)
Thermodynamics
Thermal conductivity measurements and molecular association in a series of alcohol vapors: methanol, ethanol, isopropanol, and t-butanol (Temperature and pressure dependence), 8:29292 (J:US)

ALDEHYDES
See also FORMALDEHYDE
GLUCOSE
Gas Chromatography
Identification by gas-liquid chromatography-mass spectrometry of low-molecular-weight products from the aqueous alkaline degradation of cellulose, 8:30061 (J:NL)
Liquid Column Chromatography
Identification by gas-liquid chromatography-mass spectrometry of low-molecular-weight products from the aqueous alkaline degradation of cellulose, 8:30061 (J:NL)
Mass Spectroscopy
Identification by gas-liquid chromatography-mass spectrometry of low-molecular-weight products from the aqueous alkaline degradation of cellulose, 8:30061 (J:NL)

ALDEHYDO ACIDS
See ALDEHYDES

ALFALFA
Radionuclide Migration
Evaluation of geologic materials to limit biological intrusion of low-level waste site covers, 8:29218 (BA:US)

ALGAE
Hydrogen Production
Method for producing hydrogen and oxygen by use of algae, 8:29332 (P:US)
Production
Optimizing multiproduct conversion processes for commercial use: the case of microalgae production, 8:29327 (R:US)
Productivity
Longterm dissolved and particulate alkaline phosphatase activity in a hardwater lake in relation to lake stability and phosphorus enrichments, 8:30388 (J:DE)

ALGEBRA
Classification
Classification of flexible composition algebras, I, 8:30842 (J:US)
Classification of flexible composition algebras, II, 8:30843 (J:US)
Commutation Relations
Commutativity of products for adjoint operators, 8:30829 (J:US)
Note on commutativity of adjoint operator algebras, 8:30830 (J:US)
Commutators
Extensions of Heisenberg's equations, 8:30833 (J:US)
Lie Groups
Reductive Lie-admissible algebras applied to H-spaces and connections, 8:30841 (J:US)
Mathematical Operators
Subspace decompositions invariant under ad/sub e/ for Lie-admissible algebras, 8:30832 (J:US)
Matrices
Power-associative products on matrices, 8:30836 (J:US)

ALKALI METALS
See also CESIUM
LITHIUM
POTASSIUM
RUBIDIUM
SODIUM
Adsorption
Alkali-metal-vapor removal from pressurized fluidized-bed-combustor flue gas. Annual report, October 1981-September 1982, 8:29526 (R:US)

ALKALINE FLOODING
See CAUSTIC FLOODING

ALKALINE PHOSPHATASE
Code number 3.1.3.1.
Enzyme Activity
Longterm dissolved and particulate alkaline phosphatase activity in a hardwater lake in relation to lake stability and phosphorus enrichments, 8:30388 (J:DE)

ALKALIS
See HYDROXIDES
ALKANES

ETHANE
HEXANE
METHANE
OCTANE
PENTANE
PROPANE
Structural Chemical Analysis
Characterization of Cerro Negro crude. Part II. Chemical analysis (Project sponsored by Bartlesville Energy Technology Center and Institute de Tecnologico del Venezolana Petroleo), 8:29056 (J:US)
Thermodynamic Properties
Correlations for estimating critical constants, acentric factor, structure factor, and dipole moment for undefined fractions, 8:28831 (RA:US)
ALKENES
See also BUTENES
ETHYLENE
Chemical Preparation
Bridged ferrocenes. VII. Synthesis of di- and tri-bridged ferrocenes with pentamethylene chains, 8:30054 (J:NL)
Gas Chromatography
Identification by gas-liquid chromatography-mass spectrometry of low-molecular-weight products from the aqueous alkaline degradation of cellulose, 8:30061 (J:NL)
Liquid Column Chromatography
Identification by gas-liquid chromatography-mass spectrometry of low-molecular-weight products from the aqueous alkaline degradation of cellulose, 8:30061 (J:NL)
Mass Spectroscopy
Identification by gas-liquid chromatography-mass spectrometry of low-molecular-weight products from the aqueous alkaline degradation of cellulose, 8:30061 (J:NL)
ALKYLATES
See ALCOHOLS
ALKYLATING AGENTS
Genetic Effects
Sister chromatid exchange, DNA repair, and single-gene mutation, 8:30564 (J:US)
Toxicity
Zinc-induced enhancement of resistance to alkylating agents, 8:30538 (RA:US)
ALLOY 800H
See INCOLOY 800H
ALLOY-A-286
Fatigue
Fracture tolerance analysis of the solid rocket booster servo-actuator for the space shuttle, 8:29898 (J:US)
Fracture Mechanics
Fracture tolerance analysis of the solid rocket booster servo-actuator for the space shuttle, 8:29898 (J:US)
ALLOY-HD-8077
See NICKEL BASE ALLOYS
ALLOY-HT-9
Corrosion
Compatibility of stainless steel with Pb-17 at. pct. Li, 8:29893 (J:US)
ALLOY-MA-754

Crack Propagation
Cyclic inelastic deformation aspects of fatigue-crack-growth analysis, 8:29923 (J:US)
Decomposition
Environmental degradation of engineering materials in hydrogen, 8:29865 (R:US)
Dissolution
Coordination cluster theory of solutions, 8:30027 (BA:US)
Evaluation
Cyclic inelastic deformation aspects of fatigue-crack-growth analysis, 8:29923 (J:US)
Hydrogen Embrittlement
Environmental degradation of engineering materials in hydrogen, 8:29865 (R:US)
Plasticity
Cyclic inelastic deformation aspects of fatigue-crack-growth analysis, 8:29923 (J:US)
Sorptive Properties
Environmental degradation of engineering materials in hydrogen, 8:29865 (R:US)
Stresses
Cyclic inelastic deformation aspects of fatigue-crack-growth analysis, 8:29923 (J:US)
ALLOY-WAZ-16
See NICKEL BASE ALLOYS
ALPHA PARTICLES
Emitted by nuclei.
Charge Exchange
Charge-exchange pumping of thermalized alpha particles in steady-state tandem-mirror reactors, 8:30882 (J:GB)
Energy Resolution
Measurements of the microdistributions of α-active nuclei in the human lung, 8:30511 (RA:US)
Inhalation
Epidemiologic approach to determining the REM dose to bronchial epithelium from radon daughter exposures in man, 8:30514 (RA:US)
Microdosimetry
Microdosimetry of alpha-irradiated lung, 8:30507 (RA:US)
Spatial Dose Distributions
Measurements of the microdistributions of α-active nuclei in the human lung, 8:30511 (RA:US)
Tissue Distribution
Measurements of the microdistributions of α-active nuclei in the human lung, 8:30511 (RA:US)
ALPHA REACTIONS
Eikonal Approximation
Problems of the theory of light nucleus inelastic interactions, 8:30779 (R:SU:In Russian)
Transfer Reactions
Two-step processes in the $^{40}Ca(\alpha,^{3}He)^{41}Ca$ reaction, 8:30744 (R:FR)
ALPHA-BEARING WASTES
Forecasting
Future trends in transuranic waste generation, 8:29192 (BA:US)
Separation Processes
Investigations of the treatment of alpha-contaminated wastes at the Karlsruhe Nuclear Research Center, 8:29191 (BA:US)
ALTERNATE FUELS
See FUEL SUBSTITUTION
SYNTHETIC FUELS
ALUMINIA
See ALUMINIUM OXIDES
ALUMINIUM
Biological Fouling
Microbial deposits, resistant to removal by the M.A.N. brush, on aluminum and titanium heat exchanger surfaces exposed to ambient seawater, 8:29394 (RA:US)
Microbiofouling of aluminum and titanium ocean thermal energy conversion (OTEC) evaporator tubes at a potential OTEC site, 8:29393 (RA:US)
Charged-Particle Transport
Calculation of the diffusion constant of muons in metals at low temperatures, 8:30791 (J:US)

Cleaning
Microbial deposits, resistant to removal by the M.A.N. brush, on aluminum and titanium heat exchanger surfaces exposed to ambient seawater, 8:29394 (RA:US)
Crystal-Phase Transformations
H-Division. Materials Physics quarterly report, October-December 1982, 8:29888 (R:US)
Electrometallurgy
Electrolysis of aluminum sulfide in molten chlorides, 8:29872 (R:US)
Equations of State
H-Division. Materials Physics quarterly report, October-December 1982, 8:29888 (R:US)
Fabrication
Computer-aided modeling of selected sheet metal forming process, 8:29899 (J:US)
Neutron Reactions
Monte Carlo study of the energy deposition of a flux of spallation neutrons in various samples, 8:29281 (RA:US)
Rayleigh Waves
Application of metal single crystal wedges to high frequency Rayleigh wave propagation, 8:30138 (J:US)
Solvent Extraction
Determination of extraction equilibria for several metals in the development of a process designed to recover aluminum and other metals from coal combustion ash, 8:28821 (J:NL)

ALUMINIUM 27 TARGET
Neutron Reactions
Neutron capture widths of s-wave resonances in ^{56}Fe, ^{58,60}Ni and ^{27}Al, 8:30741 (RA:US)

ALUMINIUM ALLOYS
See also ALUMINIUM BASE ALLOYS
INCONEL 617
Anodization
Incorporation of electrolyte by-products into barrier anodic Al_2O_3 coatings, 8:29887 (R:US)
Corrosion Resistance
AR and TD Fossil Energy Materials Program. Quarterly progress report for the period ending December 31, 1982, 8:28814 (R:US)
Mechanical Properties
AR and TD Fossil Energy Materials Program. Quarterly progress report for the period ending December 31, 1982, 8:28814 (R:US)
Welding
AR and TD Fossil Energy Materials Program. Quarterly progress report for the period ending December 31, 1982, 8:28814 (R:US)

Biological Fouling
Biofouling and corrosion stdies at Keahole Point, Hawaii (1978-1980), 8:29396 (RA:US)
Corrosion
Biofouling and corrosion stdies at Keahole Point, Hawaii (1978-1980), 8:29396 (RA:US)

ALUMINIUM CHLORIDES
Electrochemistry
Electrochemical studies of Fe(II) and Fe(III) in an aluminum chloride-butylpyridinium chloride ionic liquid, 8:30063 (RA:US)
Raman Spectra
Raman spectra of molten $SbCl_3/AlCl_3$ mixtures, 8:30034 (J:NL)
Solvent Properties
Solubility of antimony metal in molten antimony (III) chloride-aluminum chloride and antimony (III) chloride-cesium chloride mixtures, 8:30029 (J:GB)
Structural Chemical Analysis
Raman spectra of molten $SbCl_3/AlCl_3$ mixtures, 8:30034 (J:NL)

ALUMINIUM FLUORIDES
Phase Diagrams
Computer analysis of phase diagrams and thermodynamic properties of cryolite based systems: 1. The AlF_3-LiF-NaF system, 8:30031 (J:US)
Thermodynamic Properties
Computer analysis of phase diagrams and thermodynamic properties of cryolite based systems: 1. The AlF_3-LiF-NaF system, 8:30031 (J:US)

ALUMINIUM IONS
Ion Sources
Ion-source development at Argonne, 8:30633 (R:US)

ALUMINIUM OXIDES
See also CORUNDUM
Catalytic Effects
Promoter modifications of catalytic activity and selectivity. Progress report, April 1, 1982-March 31, 1983, 8:29288 (R:US)
Compression Strength
HTGR Plant Technology Program. Semiannual report for the period ending September 24, 1982, 8:29571 (R:US)
Dielectric Properties
Incorporation of electrolyte by-products into barrier anodic Al_2O_3 coatings, 8:29887 (R:US)
Electrodeposition
Incorporation of electrolyte by-products into barrier anodic Al_2O_3 coatings, 8:29887 (R:US)

ALUMINIUM SILICATES
Dissolution
Pulmonary retention of insoluble particles in man, 8:30509 (RA:US)
Lung Clearance
Pulmonary retention of insoluble particles in man, 8:30509 (RA:US)
Retention of various types and sizes of particle in the large airways of the rat: implications for assessing the risk of lung cancer, 8:30503 (RA:US)
Retention of relatively insoluble particles inhaled by dogs, rats and mice, 8:30504 (RA:US)
Retention Functions
Pulmonary retention of insoluble particles in man, 8:30509 (RA:US)
Retention of various types and sizes of particle in the large airways of the rat: implications for assessing the risk of lung cancer, 8:30503 (RA:US)
Spatial distribution of inhaled particles in rodent lungs, 8:30501 (RA:US)
Tissue Distribution
Retention of relatively insoluble particles inhaled by dogs, rats and mice, 8:30504 (RA:US)
Spatial distribution of inhaled particles in rodent lungs, 8:30501 (RA:US)

ALUMINIUM SULFIDES
Electrolysis
Electrolysis of aluminum sulfide in molten chlorides, 8:29872 (R:US)

ALUMINUM

AQUIFERS
Compressed Air Energy Storage
Subsurface monitoring of reservoir pressure, temperature, relative humidity, and water content at the CAES Field Experiment, Pittsfield, Illinois: system design, 8:29703 (R:US)
Natural Radioactivity
Hydrogeology of the Dakota Group aquifer with emphasis on the radium-226 content of its contained ground water, Canon City Embayment, Fremont and Pueblo Counties, Colorado, 8:30391 (R:US)
Radium 226
Hydrogeology of the Dakota Group aquifer with emphasis on the radium-226 content of its contained ground water, Canon City Embayment, Fremont and Pueblo Counties, Colorado, 8:30391 (R:US)
Sensible Heat Storage
Thermal behaviour of aquifer reservoirs for hot water storage or for low enthalpy geothermics, 8:29463 (R:FR:In French)

ARGININE
Chemical Preparation
Organic synthesis with stable isotopes (L-arginine-1-^{13}C), 8:30087 (RA:US)

ARGON
Energy-Level Transitions
Least squares fitting method for transitions with resonances, 8:30629 (RA:US)

ARGON 40 REACTIONS
Fusion Reactions
Nuclear structure and heavy-ion fusion, 8:30762 (J:PL)

ARGON HYDRIDES
Dissociation
Many-body processes in atomic and molecular physics. Progress report, September 1, 1982-August 31, 1983, 8:30636 (R:US)

ARGON IONS
Backscattering
Comparison of scattering of low energy K^+ and Ar^+ from the Au(110) surface, 8:30657 (J:NL)
ARGONNE NATIONAL LABORATORY
See ANL
ARIZONA
Geothermal Resources
Geothermal resources in Arizona: a bibliography. Circular 23, 8:29429 (R:US)

XYLENES
Atomization
Additivity of heats of atomization of benzenoid hydrocarbons, 8:30057 (J:YU)
Structural Chemical Analysis
Characterization of Cerro Negro crude. Part II. Chemical analysis (Project sponsored by Bartlesville Energy Technology Center and Institute de Tecnologico del Venezolana Petroleo), 8:29056 (J:US)
Synthesis
Formation of aromatic compounds from condensation reactions of cellulose degradation products, 8:29330 (J:GB)
ARSENIC
Diffusion
Laboratory measurements of contaminant attenuation of uranium mill tailings leachates by sediments and clay liners, 8:29249 (R:US)
Physical Radiation Effects
Energy spectra of heavy fragments from the interaction of protons with communications materials, 8:30800 (J:US)
Solvent Extraction
Determination of extraction equilibria for several metals in the development of a process designed to recover aluminum and other metals from coal combustion ash, 8:28821 (J:NL)
Spectrophotometry
Comparison of three solid waste batch leach testing methods and a column leach test method, 8:28871 (J:US)
ARSENIC COMPLEXES
Structural Chemical Analysis
Crystal structures of $[Xe_2F_3^+][AsF_6^-]$ and $[XeF_5^+][AsF_6^-]$, 8:30037 (J:US)
ARTHROPODS
See also CRUSTACEANS
Population Density
Hydrogen and sulfate additions to the forest floor and their effects on soil and litter arthropods, 8:30358 (R:US)
ASCORBIC ACID
Radiolysis
Redox properties of free radicals, 8:30083 (J:US)
ASHES

ATOMIC MODELS
Electron Correlation
Hyperspherical coordinate theory of two electron atomic processes. Progress report, 1 August 1982-31 July 1983, 8:30637 (R:US)
Phase Shift
Phase shifts in the GWKB approximation, 8:30630 (RA:US)
ATOMS
Photoionization
Resonance ionization spectroscopy, 8:30072 (J:US)
ATWS
Anticipated transients without scram.
Heat Transfer
LOFTRAN/RETRAN comparison calculations for a postulated loss of feedwater ATWS in the Sizewell B PWR, 8:29660 (RA:US)
Hydraulics
LOFTRAN/RETRAN comparison calculations for a postulated loss of feedwater ATWS in the Sizewell B PWR, 8:29660 (RA:US)
AUGER MINING
Mining Equipment
Corner-cutting mining assembly (Patent), 8:28899 (P:US)
AUSTENITIC STEELS
Prior to February, 1978 STEELS and AUSTENITE were used to index this concept.
Chemical Composition
Microstructural effects on H motion in fcc stainless alloys (HP 18 to 10 austenitic stainless steel), 8:29870 (RA:US)
Fcc Lattices
Microstructural effects on H motion in fcc stainless alloys (HP 18 to 10 austenitic stainless steel), 8:29870 (RA:US)
AUSTRALIA
See also QUEENSLAND
Terminal Facilities
Coal slurry shiploading world trade applications (Location, capacity, limiting ship size), 8:28928 (BA:US)
Waste Product Utilization
International aspects of development of the uses of fly ash with cement (Denmark, India, France, Great Britain, Canada, Japan, South Africa, Australia, USA, China, Poland), 8:28857 (RA:US)
AUTOMOBILE EFFICIENCY STANDARDS
See AUTOMOBILES
AUTOMOBILES
Fuels
California Energy Commission policy affiliation, 8:29767 (RA:US)
Internal Combustion Engines
Reduction in fuel consumption in internal combustion engines. Final report, 8:29857 (R:US)
AUTOMOTIVE FUELS
Combustion
Reduction in fuel consumption in internal combustion engines. Final report, 8:29857 (R:US)
AZIDO COMPOUNDS
Fluorination
Aromatic fluorinations suitable for fluorine-18 labeling of estrogens, 8:30092 (J:US)

B

BACA GEOTHERMAL FIELD
Geothermal Power Plants
Generating capability of the Baca geothermal field, 8:29460 (RA:US)
BACTERIA
See also ESCHERICHIA COLI
METHANOGENIC BACTERIA
SALMONELLA
Classification
Physiology of thermophilic bacteria, 8:30451 (B:US)
Genetics
Physiology of thermophilic bacteria, 8:30451 (B:US)
Molecular Biology
Physiology of thermophilic bacteria, 8:30451 (B:US)
Physiology
Physiology of thermophilic bacteria, 8:30451 (B:US)
BAFFLES
Design
Flow over circular weirs in a centrifugal field, 8:29114 (J:CA)
BALLOONING INSTABILITY
Analytical Solution
Ballooning-mode calculations in stellarators, 8:30855 (R:US)
BANKS

BARIUM
Leaching
Leaching behavior of sintered modified SYNROC-B waste forms: effect of HLW addition, 8:29196 (BA:US)
Solvent Extraction
Determination of extraction equilibria for several metals in the development of a process designed to recover aluminum and other metals from coal combustion ash, 8:28821 (J:NL)
BARIUM 133
Lung Clearance
Retention of various types and sizes of particle in the large airways of the rat: implications for assessing the risk of lung cancer, 8:30503 (RA:US)
Retention Functions
Retention of various types and sizes of particle in the large airways of the rat: implications for assessing the risk of lung cancer, 8:30503 (RA:US)
BARIUM 142
Energy Levels
IBA calculations near the Z=64 subshell, 8:30761 (J:NL)
BARIUM CHLORIDES
Thermodynamic Properties
Some thermodynamic properties of molten binary mixtures of alkaline-earth and alkali-metal chlorides, 8:30036 (TJ:US)
BARIUM FLUORIDES
Chemical Radiation Effects
Spectroscopic studies of α-induced radiation damage in divalent metal fluorides, 8:30078 (J:US)
BARIUM SULFATES
Lung Clearance
Retention of various types and sizes of particle in the large airways of the rat: implications for assessing the risk of lung cancer, 8:30503 (RA:US)
Retention Functions
Retention of various types and sizes of particle in the large airways of the rat: implications for assessing the risk of lung cancer, 8:30503 (RA:US)
BARLEY
Biological Stress
Betaine synthesis and accumulation in barley during field water-stress, 8:30411 (J:US)
Radionuclide Migration
Evaluation of geologic materials to limit biological intrusion of low-level waste site covers, 8:29218 (BA:US)
BARNWELL FUEL PROCESSING PLANT
Economics
Can the administration sell reprocessing, 8:29111 (J:US)
Government Policies
Can the administration sell reprocessing, 8:29111 (J:US)
BARSEBAECK-1 REACTOR
Lifetime
Follow-up of transients. Stage 1, 8:29554 (R:SE:In Swedish)
Stress Analysis
Follow-up of transients. Stage 1, 8:29554 (R:SE:In Swedish)
BARSTOW SOLAR PILOT PLANT
10-MW solar central receiver pilot plant at Barstow, California.
Central Receivers
10-MWe solar-thermal central-receiver pilot-plant receiver steam generation (Test 1030) evaluation report, 8:29352 (R:US)
BASALT
Radionuclide Migration
Radionuclide solubility and transport in basalt, 8:29171 (J:US)
Rock Mechanics
Thermomechanical simulation of a nuclear-waste canister in a repository in basalt, 8:30603 (R:US)
Thermal Stresses
Thermomechanical simulation of a nuclear-waste canister in a repository in basalt, 8:30603 (R:US)
Waste-Rock Interactions
Comparison of the hydrothermal stability of simulated spent fuel and borosilicate glass in a basaltic environment, 8:29161 (R:US)
BATHYMETRY
Marine geologic data at OTEC sites, 8:29408 (RA:US)
BATTERIES (ELECTRIC)
See ELECTRIC BATTERIES
BATTERIES (ISOTOPIC)
See RADIOISOTOPE BATTERIES
BEAD WALLS
Performance
Analysis of performance of the passive-solar-heated Patoka Nature Center, Birdseye, Indiana. Final project report, 8:29412 (R:US)
BEAM BENDING MAGNETS
Magnet Cores
Magnetic properties of the iron laminations for CBA magnets, 8:30206 (R:US)
Magnetic Fields
End fields of CBA superconducting magnets, 8:30175 (R:US)
BEAM BUNCHING
Instability
Longitudinal instabilities with a non-harmonic rf potential, 8:30177 (R:US)
BEAM DYNAMICS
See also BEAM BUNCHING
Computer Codes
Beam-tracking studies with RINGBEARER II, 8:30195 (R:US)
Computerized Simulation
Beam-tracking studies with RINGBEARER II, 8:30195 (R:US)
Moments Method
Moment approach to charged particle beam dynamics, 8:30188 (R:US)
BEAM EMITTANCE
Beam Monitors
Emittance scanner for intense low-energy ion beams, 8:30189 (R:US)
BEAM FOCUSING MAGNETS
Magnetic Fields
End fields of CBA superconducting magnets, 8:30175 (R:US)
Radiation Hardening
Radiation-hardened field coils for FMIT quadrupoles, 8:30236 (R:US)
BEAM MONITORS
Design
Current integrator using an ADC-module, 8:30279 (R:JP:In Japanese)
Performance Testing
Wide-bandwidth test fixture for electromagnetic-beam sensors, 8:30237 (R:US)
Pulse Techniques
Energy measurement using a resonator-based time-of-flight system, 8:30181 (R:US)
BEAM PERVEANCE
See BEAM EMITTANCE

BEAM-FOIL SPECTROSCOPY
See ION SPECTROSCOPY
BEAM-GAS SPECTROSCOPY
See ION SPECTROSCOPY
BEARINGS
Fluid Flow
Fluid-inertia effects in radial flow between oscillating, rotating parallel disks, 8:30129 (R:US)
BECK CYCLE
See MIST-LIFT CYCLES
BEHAVIOR
Limited to living systems.
Response Modifying Factors
Operant behavior of rats exposed to lead before or after weaning, 8:30561 (J:US)
BELGIUM
District Heating
Use of coal for urban district heating, 8:29853 (R:XU)
Radioactive Waste Disposal
Low- and intermediate-level waste management practices in Belgium, 8:29183 (BA:US)
Radioactive Waste Management
Low- and intermediate-level waste management practices in Belgium, 8:29183 (BA:US)
Radioactive Waste Processing
Low- and intermediate-level waste management practices in Belgium, 8:29183 (BA:US)
BENTONITE
Performance Testing
Review of waste package verification tests. Semiannual report, April-September 1982, 8:29156 (R:US)
BENZANTHRACENE
Genetic Effects
Sister chromatid exchange, DNA repair, and single-gene mutation, 8:30564 (J:US)
BENZENE
Chemical Preparation
Preparation of multitritiated arenes, 8:30091 (J:GB)
Double Labelling
Preparation of multitritiated arenes, 8:30091 (J:GB)
Photochemistry
Photochemistry of benzene and oxygen in supersonic cluster beams, 8:30065 (J:US)
Thermodynamic Properties
Correlations for estimating critical constants, acentric factor, structure factor, and dipole moment for undefined fractions, 8:28831 (RA:US)
BENZOIC ACID
Thermodynamic Properties
Correlations for estimating critical constants, acentric factor, structure factor, and dipole moment for undefined fractions, 8:28831 (RA:US)
BENZOPYRENE
Fluorescence Spectroscopy
Identification and quantification of polynuclear aromatic compounds in synthoil by room-temperature phosphorimetry, 8:28836 (J:NL)
Lung Clearance
Deposition, retention, and biological fate of inhaled benzo(a)pyrene adsorbed onto ultrafine particles and as a pure aerosol, 8:30568 (J:US)
Metabolic Activation
Benzo(a)pyrene metabolism and mutation induction in CHO cells using either rat liver homogenate or Syrian hamster embryonic cell-mediated activation, 8:30549 (RA:US)
Metabolism
Benzo(a)pyrene metabolism and mutation induction in CHO cells using either rat liver homogenate or Syrian hamster embryonic cell-mediated activation, 8:30549 (RA:US)
Time course of metabolish of benzo[e]pyrene by hamster embryo cells and the effect of chemical modifiers, 8:30570 (J:NL)
Metabolites
Benzo[a]pyrene metabolites: formation in rat liver cell-culture lines, binding to macromolecules, and mutagenesis in V79 hamster cells, 8:30569 (J:US)
Retention
Deposition, retention, and biological fate of inhaled benzo(a)pyrene adsorbed onto ultrafine particles and as a pure aerosol, 8:30568 (J:US)
Distribution and retention of benzo(a)pyrene in rats after inhalation, 8:30567 (J:NL)
Tissue Distribution
Distribution and retention of benzo(a)pyrene in rats after inhalation, 8:30567 (J:NL)
BERYLLIUM
Chemical Reactions
Ab initio molecular orbital calculations on beryllium and magnesium atom reactions with water, 8:30030 (J:NL)
Neutron Reactions
Monte Carlo study of the energy deposition of a flux of spallation neutrons in various samples, 8:29281 (RA:US)
Oxidation
Initial stages of oxidation of metals and alloys. Progress report, March 29, 1983, 8:29874 (R:US)
Physical Radiation Effects
Helium migration in alpha-irradiated beryllium, 8:29881 (R:SU:In Russian)
BERYLLIUM COMPLEXES
Chemical Reaction Yield
Ab initio molecular orbital calculations on beryllium and magnesium atom reactions with water, 8:30030 (J:NL)
BERYLLIUM MODERATORS
See BERYLLIUM
BETA BEAMS (ELECTRONS)
See ELECTRON BEAMS
BETA DOSIMETRY
Extrapolation Chambers
Field practices and techniques: introduction, 8:30294 (R:US)
BETAINE
Biological Accumulation
Betaine synthesis and accumulation in barley during field water-stress, 8:30411 (J:US)
Biosynthesis
Betaine synthesis and accumulation in barley during field water-stress, 8:30411 (J:US)
BICARBONATES
See ACID CARBONATES
BI-GAS PROCESS
Computerized Simulation
BI-GAS coal-gasification program. Final report, November 1979-August 1982 (Tests G10A; G11, A, B, C, D, E, F, G; G12, A; G12, A; G13; G14, A; G15, A; G16, A, B; G17, A, B, C, D, E, F; G18, A, B; G19 A, B), 8:28797 (R:US)
Efficiency
BI-GAS coal-gasification program. Final report, November 1979-August 1982 (Tests G10A; G11, A, B, C, D, E, F, G; G12, A; G12, A; G13; G14, A; G15, A; G16, A, B; G17, A, B, C, D, E, F; G18, A, B; G19 A, B), 8:28797 (R:US)
Fuel Feeding Systems
BI-GAS coal-gasification program. Final report, November 1979-August 1982, 8:28798 (R:US)
Measuring Instruments
BI-GAS coal-gasification program. Final report, November 1979-August 1982, 8:28798 (R:US)
Monitoring
Engineering-support services for the DOE/GRI Coal-Gasification Research Program. Quarterly technical progress report, July-September 1980, 8:28795 (R:US)
Pilot Plants
BI-GAS coal-gasification program. Final report, November 1979-August 1982 (Tests G10A; G11, A, B, C, D, E, F, G; G12, A; G12, A; G13; G14, A; G15, A; G16, A, B; G17, A, B, C, D, E, F; G18, A, B; G19 A, B), 8:28797 (R:US)
BI-GAS coal-gasification program. Final report, November 1979-August 1982, 8:28798 (R:US)
Engineering support services for the DOE/GRI Coal Gasification Research Program. Quarterly technical progress report for the period October-December 1979, 8:28796 (R:US)

Safety Engineering
BI-GAS coal-gasification program. Final report, November 1979-August 1982 (Tests G10A; G11, A, B, C, D, E, F, G; G12, A; G12, A; G13; G14, A; G15, A; G16, A, B; G17, A, B, C, D, E, F; G18, A, B; G19 A, B), 8:28797 (R:US)
BINARY ALLOY SYSTEMS
Oxidation
The formation of solid solution oxides during internal oxidation, 8:29917 (J:US)
BINDING ENERGY
For chemical and nuclear bonding; see also BONDING.
Chemical Shift
Justification of the approximation that shifts in nonbonding valence orbital ionization potential are eight-tenths of shifts in core binding energy, 8:29989 (J:US)
BIOASSAY
Evaluation
Aspergillus nidulans: systems and results of tests for chemical induction of mitotic segregation and mutation. I. Diploid and duplication assay systems, 8:30560 (J:NL)
Field Tests
Field evaluation of hazardous waste site bioassessment protocols, 8:30359 (R:US)
BIOFOULING
See BIOLOGICAL FOULING
BIOLOGICAL DOSEMETERS
Statistics
Statistical aspects of cytogenetic dosimetry, 8:30487 (RA:DE)
BIOLOGICAL FOULING
Measuring Methods
New flow cell technology for assessing primary biofouling in oceanic heat exchangers, 8:29397 (RA:US)
Special tube monitors (STMs) for OTEC, 8:29391 (RA:US)
Research Programs
Overview of the OTEC biofouling, corrosion, and materials program, 8:29389 (RA:US)
BIOLOGICAL RADIATION EFFECTS
See also GENETIC RADIATION EFFECTS
Biological Indicators
Biological indicators of radiation effects in man, 8:30475 (R:DE)
Metaphase finding, features for identification and their detection in image and diffraction pattern, 8:30486 (RA:DE)
Statistics
Misuse of statistics in the interpretation of data on low-level radiation, 8:30472 (R:US)
BIOLOGICAL REACTORS
See BIOREACTORS
BIOLOGICAL REPAIR
Age Dependence
The repair of potentially lethal and sublethal damage in unfed plateau-phase cultures irradiated at 0.78 Gy/hr (^{137}Cs), 8:30519 (J:US)
Biological Indicators
Inducibility of metallothionein gene expression as an indicator of DNA damage and repair proficiency in human cells, 8:30543 (RA:US)
BIOLOGICAL TESTING
See BIOASSAY
BIOMASS
Fermentation
Separation of biopolymer from fermentation broths, 8:29336 (J:US)
Filtration
Separation of biopolymer from fermentation broths, 8:29336 (J:US)
Pyrolysis
Ablative pyrolysis of biomass in the entrained-flow cyclonic reactor at SERI. Annual report, 1 October 1981-30 November 1982, 8:29325 (R:US)
BIOMASS PLANTATIONS
Case history development of a hybrid poplar nursery at Reynolds Metals Company, Massena, NY. Final report, 8:29318 (R:US)
Contracts
Contract arrangements for feedstock supply for energy farming. Final report, 8:29319 (R:NZ)
BIOREACTORS
Prior to March 1983 this concept was indexed to CHEMICAL REACTORS.
Efficiency
Rapid methane generation from solid waste. Final project report, 8:29309 (R:US)
BIPYRIDINES
Electron Transfer
Study of intermediates from transition metal excited-state electron-transfer reactions. Progress report, August 1, 1981-March 31, 1983, 8:29285 (R:US)
Photolysis
Visible light photolysis of tris(bipyridine)ruthenium(II)-titanium(II) solutions, 8:30070 (J:NL)
Reaction Intermediates
Study of intermediates from transition metal excited-state electron-transfer reactions. Progress report, August 1, 1981-March 31, 1983, 8:29285 (R:US)
BISMUTH
Neutron Reactions
Monte Carlo study of the energy deposition of a flux of spallation neutrons in various samples, 8:29281 (RA:US)
Permeability
An electrochemical study of the solubility and diffusivity of oxygen in the respective liquid metals indium, gallium, antimony and bismuth, 8:29918 (J:NL)
BISMUTH ALLOYS
Convection
Thermofluid dynamics of the liquid lead-bismuth target for the spallation neutron source at SIN, 8:29272 (RA:US)
BISULFATES
See ACID SULFATES
BITUMENS
Thermal Recovery
Street ranch pilot test of fracture-assisted steamflood technology, 8:29071 (J:US)
BITUMINOUS COAL
Sorptive Properties
Low-energy process for separating hydrogen and methane in advanced coal-gasification processes. Final report, September 8, 1980-January 7, 1983, 8:28801 (R:US)
BLACK SHALES
Directional Drilling
Drilling of a deviated well: E.C. Newell 10056-D Meigs County, Ohio, 8:29063 (R:US)
Failures
Triaxial testing of oil shale from the Devonian Chattanooga shale formation in Dekalb County, Tennessee, 8:29072 (R:US)
Fractures
Method to identify zones of intense jointing with application to the Parsons Lineament, West Virginia, 8:29059 (R:US)
Shallow seismic investigations of Devonian-shale gas production, 8:29062 (R:US)
Gas Yields
Distribution of gas, organic carbon, and vitrinite reflectance in the eastern Devonian gas shales and their relationship to the geologic framework, 8:29060 (R:US)
Geochemistry
Distribution of gas, organic carbon, and vitrinite reflectance in the eastern Devonian gas shales and their relationship to the geologic framework, 8:29060 (R:US)
Geology
Study of hydrogeologic trends in exploration for Devonian-shale gas in the Midway-Extra gas field of Putnam County, West virginia, 8:29058 (R:US)
Hydrology
Study of hydrogeologic trends in exploration for Devonian-shale gas in the Midway-Extra gas field of Putnam County, West virginia, 8:29058 (R:US)
Radioactivity
Distribution of gas, organic carbon, and vitrinite reflectance in the eastern Devonian gas shales and their relationship to the geologic framework, 8:29060 (R:US)

Resource Assessment
Reservoir engineering aspects and resource-assessment methodology of eastern Devonian Gas shales, 8:29061 (R:US)
Seismic Surveys
Shallow seismic investigations of Devonian-shale gas production, 8:29062 (R:US)
Stratigraphy
Distribution of gas, organic carbon, and vitrinite reflectance in the eastern Devonian gas shales and their relationship to the geologic framework, 8:29060 (R:US)
BLADES (COMPRESSOR)
See COMPRESSOR BLADES
BLADES (TURBINES)
See TURBINE BLADES
BLANKETS (BREEDING)
See BREEDING BLANKETS
BLENDERS
See MIXERS
BLEOMYCIN
Toxicity
Modulation of bleomycin cytotoxicity, 8:30559 (J:US)
BLOWERS
Monitoring
Maintenance of coal slurry dewatering equipment and the application of a Predix diagnostic system, 8:28965 (BA:US)
BOGS
See SWAMPS
BOILERS
See also REFUSE-FUELED BOILERS
Fuel Substitution
Methacoal fuels, or coal-alcohol slurry fuels, an entree for methanol to world markets, 8:28977 (RA:US)
Retrofitting
Retrofitting existing boilers with solid waste burners, 8:29293 (BA:US)
BOILING DETECTION
Characterization of two-phase flow using neutronic fluctuations (LMFBR), 8:29691 (R:US)
BOILING WATER COOLED AND MODERATED REACTO
See BWR TYPE REACTORS
BOLTING
See FASTENING
BONE MARROW CELLS
Cell Proliferation
Flow-cytometric analysis of cultured bone marrow mononuclear phagocytes, 8:30426 (RA:US)
Sensitivity
Macromegakaryocytosis after hydroxyurea (Mice), 8:30555 (J:US)
Sister Chromatid Exchanges
Sister chromatid exchange (SCE) analysis in bone marrow of mice treated with shale oils and shale process waters, 8:29088 (RA:US)
Size
Macromegakaryocytosis after hydroxyurea (Mice), 8:30555 (J:US)
BONES
See SKELETON
BORON ALLOYS
Physical Radiation Effects
Density of neutron irradiated and annealed amorphous $Fe_{40}Ni_{40}B_{20}$, 8:29879 (R:DE)
BORON IONS
Ion Sources
Ion-source development at Argonne, 8:30633 (R:US)
BOROSILICATE GLASS
Chemical Composition
Comparative study of seven glasses for solidification of nuclear wastes, 8:29237 (BA:US)
Corrosion
Chemical stability of simulated HLW forms in contact with clay media, 8:29238 (BA:US)
Comparative study of seven glasses for solidification of nuclear wastes, 8:29237 (BA:US)
Determination of the corrosion mechanisms of high-level waste containing glass, 8:29235 (BA:US)
Effect of overpack materials on glass leaching in geological burial, 8:29231 (BA:US)
Mechanisms for hydrothermal leaching of nuclear waste glasses: properties and evaluation of surface layers, 8:29222 (BA:US)
Corrosion Resistance
Effects of waste composition and loading on the chemical durability of a borosilicate glass, 8:29221 (BA:US)
Crystallization
Attempt to assess the long-term crystallization rate of nuclear waste glasses, 8:29969 (BA:US)
Microstructures and crystallization in simulated waste glasses, 8:29181 (BA:US)
Quantitative determination of crystalline phases in nuclear waste glasses, 8:29970 (BA:US)
Dissolution
Chemical durability of some HLW glasses: effects of hydrothermal conditions and ionizing radiation, 8:29234 (BA:US)
Fracture Properties
Characterization of mechanical properties of nuclear waste glasses, 8:29967 (BA:US)
Fractures
Fracture appraisal of large scale glass blocks under realistic thermal conditions, 8:29968 (BA:US)
Leaching
Burial effects on nuclear waste glass, 8:29233 (BA:US)
Chemical durability of some HLW glasses: effects of hydrothermal conditions and ionizing radiation, 8:29234 (BA:US)

Construction
US central station nuclear electric generating units: significant milestones. Status as of October 1, 1982, 8:29595 (R:US)
Containment Systems
Suppression pool temperature transient analysis with RETRAN-01, 8:29665 (RA:US)
ECCS
First-order model for non-equilibrium ECC pressure suppression, 8:29635 (R:US)
Some applications of the moving finite element method to fluid flow and related problems, 8:29641 (R:US)
Fuel Assemblies
Local void and slip model used in BODYFIT-2PE, 8:29538 (R:US)
Fuel Cans
Effect of hydrogen on the oxygen embrittlement of beta-quenched Zircaloy-4 fuel cladding, 8:29698 (J:US)
Fuel Cycle
Reactors and fuel production, 8:29537 (R:US)
Fuel Element Failure
Effect of hydrogen on the oxygen embrittlement of beta-quenched Zircaloy-4 fuel cladding, 8:29698 (J:US)
Fuel Rods
Fuel-Performance-Improvement Program. Semiannual progress report, April-September 1982, 8:29540 (R:US)
Licensing applications and requirements of an ideal steady-state fuel-performance code. Final report, 8:29545 (R:US)
SPEAR-BETA fuel-performance code system. Volume 2 (revision 1). Part 1. Programmer's manuals. Part 2. User's manual, 8:29555 (R:US)
SPEAR-FCODE-GAMMA functional specifications. Final report, 8:29546 (R:US)
Legal Aspects
Licensee Event Report (LER) compilation: for month of March 1983, 8:29683 (R:US)
Loss of Coolant
Some applications of the moving finite element method to fluid flow and related problems, 8:29641 (R:US)
Suppression pool temperature transient analysis with RETRAN-01, 8:29665 (RA:US)
Materials Testing
Light water reactor and polymeric materials, 8:29549 (R:JP:In Japanese)

Personnel
Neutron dosimetry at commercial nuclear plants. Final report of Subtask B: dosimeter response, 8:29551 (R:US)
Pipes
Piping seismic test with energy-absorbing devices. Final report, 8:29542 (R:US)
Planning
US central station nuclear electric generating units: significant milestones. Status as of October 1, 1982, 8:29595 (R:US)
Primary Coolant Circuits
Plant Materials Program: progress June 1981 to May 1982, 8:29541 (R:US)
Study of dilute reagent decontamination for application in boiling-water reactors, 8:29547 (R:US)
Two-phase jet loads, 8:29690 (R:US)
Weld residual-stress redistribution near growing cracks. Final report, 8:29548 (R:US)
Reactor Accidents
Aerosol release and transport program. Quarterly progress report, October-December 1982, 8:29588 (R:US)
Reactor Components
Two-phase jet loads, 8:29690 (R:US)
Reactor Cores
Analysis of density-wave oscillations in ventilated channels, 8:29552 (R:US)
Extended Fuel-Burnup Program: cold critical measurement performed before Cycle 8 startup at Monticello reactor, 8:29539 (R:US)
Reactor Licensing
Regulatory licensing status summary report. Nuclear power plants data for decisions (Blue Book), March 1-March 31, 1983, 8:29596 (R:US)
Reactor Materials
Mechanistic aspects of stress-corrosion cracking of type 304 stainless steel in LWR systems, 8:29553 (R:US)
Plant Materials Program: progress June 1981 to May 1982, 8:29541 (R:US)
Weld residual-stress redistribution near growing cracks. Final report, 8:29548 (R:US)
Reactor Operation
Reactor operating experiences, 1978-1980, 8:29550 (R:US)
US central station nuclear electric generating units: significant milestones. Status as of October 1, 1982, 8:29595 (R:US)
Reactor Operators
RETRAN analyses for improving plant procedures and operator training, 8:29654 (RA:US)
Reactor Safety
Licensee Event Report (LER) compilation: for month of March 1983, 8:29683 (R:US)
Long-range research plan, FY 1984-FY 1988, 8:29680 (R:US)
Safety research programs sponsored by Office of Nuclear Regulatory Research. Quarterly progress report, July 1-September 30, 1982, 8:29684 (R:US)
Reactor Stability
BWR stability analysis with RETRAN, 8:29662 (RA:US)
Specifications
Reactors and fuel production, 8:29537 (R:US)
Spent Fuels
Fuel inventories and derived parameters for the reactor systems CDFR, LWR, AGR and MAGNOX, 8:29598 (R:GB)
Steam Systems
Plant Materials Program: progress June 1981 to May 1982, 8:29541 (R:US)
Transients
Analysis of load rejection transient in a 2436MWt BWR/4 plant with RETRAN-01/02, 8:29669 (RA:US)
BWR stability analysis with RETRAN, 8:29662 (RA:US)
Conference proceedings: second international RETRAN conference, 8:29642 (R:US)
Numerical solution method improvements for RETRAN, 8:29644 (RA:US)
Prediction of GE-ATLAS transient boiling transition data using RETRAN-02/RETRAN-15F, 8:29650 (RA:US)
RETRAN-01/-02 analysis of a dual recirculation pump trip transient in a 2436-MWt BWR/4 plant, 8:29663 (RA:US)
RETRAN analyses for improving plant procedures and operator training, 8:29654 (RA:US)
RETRAN nonequilibrium two-phase flow model for operational transient analyses, 8:29643 (RA:US)

CARBON 13
Isotope Separation
Dynamics of the photodecarbonylation of dibenzylketone in a micellar detergent solution: effect of temperature on the absolute quantum yields and on ^{13}C enrichment, 8:30060 (J:NL)
Laser Isotope Separation
^{13}C isotope separation by laser excitation of CO, 8:29267 (B:US)
CARBON DIOXIDE
Biological Pathways
Path of carbon: from stratosphere to cell, 8:30440 (R:US)
Chemical Reactions
Interaction of CO, CO_2, and D_2 with rhodium oxide: its reduction and catalytic stability, 8:30007 (J:US)
Chemisorption
Interaction of CO, CO_2, and D_2 with rhodium oxide: its reduction and catalytic stability, 8:30007 (J:US)
Crystallization
CNG acid-gas-removal process. Technical progress report No. 6, 1 February 1982-30 April 1982, 8:28802 (R:US)
Environmental Effects
Ocean chemistry and atmospheric CO_2, 8:30387 (J:US)
Environmental Impacts
Response of the North American corn belt to climatic warming, 8:30531 (R:US)
Fourier Transformation
Analysis of the Fourier transform spectra of $^{12}C^{17}O_2$ and $^{12}C^{17}O^{18}O$: the nu_3 (15 μm) region, 8:30033 (J:US)
Photoionization
Vibrational effects in the shape-resonant photoionisation of CO_2, 8:30071 (J:GB)
Removal
BI-GAS coal-gasification program. Final report, November 1979-August 1982, 8:28798 (R:US)
CNG acid-gas-removal process. Technical progress report No. 6, 1 February 1982-30 April 1982, 8:28802 (R:US)
Sinks
The ocean: major sink for fossil fuel CO_2, 8:30337 (J:US)
Solvent Properties
CNG acid-gas-removal process. Technical progress report No. 6, 1 February 1982-30 April 1982, 8:28802 (R:US)
Spectrometers
Analysis of the Fourier transform spectra of $^{12}C^{17}O_2$ and $^{12}C^{17}O^{18}O$: the nu_3 (15 μm) region, 8:30033 (J:US)
CARBON DIOXIDE INJECTION
Bench-Scale Experiments
Equilibrium phase compositions of CO_2-crude oil mixtures: comparison of continuous multiple contact and slim tube displacement tests, 8:29037 (J:US)
Equilibrium phase compositions of CO_2-hydrocarbon mixtures: measurement by a continuous multiple contact experiment, 8:29038 (J:US)
Neutron Logging
Three-phase quantitative monitoring method for CO_2 floods, 8:29004 (J:US)
Phase Studies
Equilibrium phase compositions of CO_2-hydrocarbon mixtures: measurement by a continuous multiple contact experiment, 8:29038 (J:US)
Investigation of phase behavior-macroscopic bypassing interaction in CO_2 flooding, 8:29006 (J:US)
Pressure Dependence
Effects of petroleum-reservoir conditions on oil recovery by carbon dioxide injection, 8:28991 (R:US)
Simulation
Equilibrium phase compositions of CO_2-crude oil mixtures: comparison of continuous multiple contact and slim tube displacement tests, 8:29037 (J:US)
Temperature Effects
Effects of petroleum-reservoir conditions on oil recovery by carbon dioxide injection, 8:28991 (R:US)
Water Requirements
Identification of water requirements for selected enhanced oil recovery methods, 8:28989 (R:US)
CARBON DIOXIDE LASERS
Control
Gaseous saturable absorbers for the Helios CO_2 laser system, 8:30956 (J:US)
CARBON IONS
Energy-Level Transitions
Doubly excited states in some light atoms, 8:30649 (J:NL)
Ion Sources
Ion-source development at Argonne, 8:30633 (R:US)
CARBON MONOXIDE
Adsorption
Study of Fischer-Tropsch synthesis through the use of surface intermediate scavengers. Progress report, August 1, 1982-April 1, 1983, 8:29287 (R:US)
Chemical Reactions
Interaction of CO, CO_2, and D_2 with rhodium oxide: its reduction and catalytic stability, 8:30007 (J:US)
Chemisorption
Interaction of CO, CO_2, and D_2 with rhodium oxide: its reduction and catalytic stability, 8:30007 (J:US)
Corrosive Effects
AR and TD Fossil Energy Materials Program. Quarterly progress report for the period ending December 31, 1982, 8:28814 (R:US)
Desorption
Promoter modifications of catalytic activity and selectivity. Progress report, April 1, 1982-March 31, 1983, 8:29288 (R:US)

Methanation
Metallocarboranes structurally engineered for the reduction of carbon monoxide, 8:28792 (R:US)
Promoter modifications of catalytic activity and selectivity. Progress report, April 1, 1982-March 31, 1983, 8:29288 (R:US)
Photoionization
Studies of photoionization processes from ground-state and excited-state atoms and molecules, 8:30635 (R:US)
Photon-Molecule Collisions
Multiphoton-induced fluorescence and ionization of $B^1\Sigma^+$ carbon monoxide, 8:30643 (R:US)

CARBON MONOXIDE LASERS
Design
Resonantly enhanced method for generation of tunable, coherent vacuum-ultraviolet radiation, 8:30119 (P:US)
Far Ultraviolet Radiation
Resonantly enhanced method for generation of tunable, coherent vacuum-ultraviolet radiation, 8:30119 (P:US)
Uses
^{13}C isotope separation by laser excitation of CO, 8:29267 (B:US)

CARBONATES
See also PLUTONIUM CARBONATES
Reaction Kinetics
Estimation of activity coefficients in concentrated sulfite-sulfate solutions, 8:28870 (J:US)
Thermodynamic Activity
Estimation of activity coefficients in concentrated sulfite-sulfate solutions, 8:28870 (J:US)

CARBONYLS
Only for compounds of metals with carbonyl radicals.
Chemical Bonds
Infrared intensity and the CO-metal bond, 8:30018 (J:NL)
Crystal Structure
Crystal structure of (eta^5-C_5H_5)Mn(CO)$_2$-(eta^2-norbornadiene): the absence of a postulated C-H-metal interaction in an 18-electron complex, 8:30056 (J:NL)
Lattice Parameters
Crystal structure of (eta^5-C_5H_5)Mn(CO)$_2$-(eta^2-norbornadiene): the absence of a postulated C-H-metal interaction in an 18-electron complex, 8:30056 (J:NL)
Molecular Structure
Crystal structure of (eta^5-C_5H_5)Mn(CO)$_2$-(eta^2-norbornadiene): the absence of a postulated C-H-metal interaction in an 18-electron complex, 8:30056 (J:NL)
Synthesis
Metallocarboranes structurally engineered for the reduction of carbon monoxide, 8:28793 (R:US)

CARBORANES
Synthesis
Metallocarboranes structurally engineered for the reduction of carbon monoxide, 8:28793 (R:US)
Metallocarboranes structurally engineered for the reduction of carbon monoxide, 8:28792 (R:US)

CARBOXYLASE
Inhibition
Inactivation of Rhodospirillum rubrum ribulose bisphosphate carboxylase/oxygenase by the affinity label 2-N-chloroamino-2-deoxypentitol 1,5-bisphosphate, 8:30409 (J:NL)

CARBOXYLIC ACID SALTS
See also TARTRATES
Phase Diagrams
Amphiphilic properties of low-equivalent-weight organic salts, 8:30039 (R:US)
Phase Studies
Amphiphilic properties of low-equivalent-weight organic salts, 8:30039 (R:US)
Solubility
Amphiphilic properties of low-equivalent-weight organic salts, 8:30039 (R:US)
Solvent Properties
Amphiphilic properties of low-equivalent-weight organic salts, 8:30039 (R:US)

CARCINOGENESIS
Age Dependence
Theory of age dependence in the incidence of lung carcinomas following inhalation of a radioactive atmosphere, 8:30517 (RA:US)
Biophysics
Biophysical aspects of radiation carcinogenesis, 8:30527 (BA:US)
Radioinduction
Studies on the multistage nature of radiation carcinogenesis, 8:30525 (J:US)
Reviews
Biophysical aspects of radiation carcinogenesis, 8:30527 (BA:US)
Risk Assessment
Dosimetric concepts for inhaled radon decay products in the human lung, 8:30500 (RA:US)
Epidemiologic approach to determining the REM dose to bronchial epithelium from radon daughter exposures in man, 8:30514 (RA:US)
Estimation of lung cancer risk from environmental exposure to airborne plutonium from the Rocky Flats Plant, 8:30515 (RA:US)
Estimation of the bronchial cancer risk from the inhalation of long-lived alpha emitting radionuclides, 8:30516 (RA:US)
Impact of energy and industrial pollution on public health, 8:29749 (R:US)
Lung dose and lung cancer risk by inhalation of radon daughters, 8:30497 (RA:US)
Retention of various types and sizes of particle in the large airways of the rat: implications for assessing the risk of lung cancer, 8:30503 (RA:US)
Theory of age dependence in the incidence of lung carcinomas following inhalation of a radioactive atmosphere, 8:30517 (RA:US)

CARCINOGENS
Risk Assessment
Non-regulatory and cost-effectiveness control of carcinogenic hazard. The beginnings: a methodology for using animal data to decrease uncertainty in human risk of carcinogens released by energy technologies, 8:30532 (R:US)

CARCINOMAS
Pathogenesis
Inhalation studies, 8:29080 (RA:US)

CARIBOU
See DEER

CASCADE IMPACTORS
Design
High-temperature-high-pressure cascade impactor design, performance, and data analysis methods, 8:30338 (J:US)
Performance
High-temperature-high-pressure cascade impactor design, performance, and data analysis methods, 8:30338 (J:US)

CASINGS
See COVERINGS

CASINGS (WELL)
See WELL CASINGS

CATALYSTS
Deactivation
Novel approaches concerning catalyst deactivation. Quarterly report No. 3, January 1, 1982-April 31, 1982, 8:28805 (R:US)
Novel approaches concerning catalyst deactivation. Quarterly report No. 1, May 1, 1981-August 31, 1981, 8:28807 (R:US)
Novel approaches concerning catalyst deactivation. Quarterly report No. 2, September 1, 1981-December 31, 1981, 8:28806 (R:US)
Materials
Metal chelate catalysts for fuel cells. Final report June 1979 - October 1982, 8:29788 (R:US)
Microstructure
Novel approaches concerning catalyst deactivation. Quarterly report No. 2, September 1, 1981-December 31, 1981, 8:28806 (R:US)

Particle Size
Novel approaches concerning catalyst deactivation. Quarterly report No. 2, September 1, 1981-December 31, 1981, 8:28806 (R:US)
Specificity
Promoter modifications of catalytic activity and selectivity. Progress report, April 1, 1982-March 31, 1983, 8:29288 (R:US)
Synthesis
Metallocarboranes structurally engineered for the reduction of carbon monoxide, 8:28793 (R:US)

CATALYTIC CRACKING
Fluidized Bed
Solids backmixing in high-velocity beds, 8:29049 (R:US)

CATHODES
Materials Testing
Development of cathode materials for the molten-carbonate fuel cell, 8:29784 (R:US)

CATTAILS
Productivity
Effects of size and growth rate on vegetative reproduction in Typha, 8:30461 (J:DE)

CAUSTIC FLOODING
Simulation
Alkaline flood prediction studies, Ranger VII pilot, Wilmington Field, California, 8:29034 (J:US)
Study of the oil wedge phenomenon through the use of chemical flood simulator, 8:29041 (J:US)
Water Requirements
Identification of water requirements for selected enhanced oil recovery methods, 8:28989 (R:US)

CAVITY RESONATORS
See also SUPERCONDUCTING CAVITY RESONATORS
Breakdown
Criteria for vacuum breakdown in rf cavities, 8:30145 (R:US)
Energy Storage
Microwave energy storage in resonant cavities, 8:30106 (R:US)

CBA (BROOKHAVEN COLLIDING BEAM ACCELERATO
See ISABELLE STORAGE RINGS

CDC COMPUTERS
Computer Codes
AELIB user's manual, 8:30982 (R:CA)

CDFR REACTOR
Spent Fuels
Fuel inventories and derived parameters for the reactor systems CDFR, LWR, AGR and MAGNOX, 8:29598 (R:GB)

CELL CULTURES
Biological Radiation Effects
Pion radiobiology, 8:30493 (RA:US)
Cell Proliferation
Emergence of permanent cell lines from cultured diploid cell strains, 8:30429 (RA:US)
Sensitivity
Comparison of direct-acting cytogenetic and mutagenic effects of a shale oil retort process water, 8:30552 (RA:US)

CELL FLOW SYSTEMS
Data Acquisition Systems
Los Alamos cell analysis (LACEL) flow cytometry data acquisition system, 8:30420 (RA:US)
Data Processing
Sequential detection and analysis of multiple electronic and optical measurements on cells, 8:30428 (RA:US)
Design
Flow analysis of karyotype instability, 8:30425 (RA:US)
High-speed cell selection, 8:30419 (RA:US)
Los Alamos cell analysis (LACEL) flow cytometry data acquisition system, 8:30420 (RA:US)
Electric Measuring Instruments
Sequential detection and analysis of multiple electronic and optical measurements on cells, 8:30428 (RA:US)
Fluorescence Spectroscopy
Is the central dogma of flow cytometry true: that fluorescence intensity is proportional to cellular dye content, 8:30433 (J:US)
Optimization
Multiparameter cell sorter II, 8:30418 (RA:US)

CELL GROWTH (ANIMAL)
See ANIMAL CELLS

CELL KILLING
Response Modifying Factors
Modulation of bleomycin cytotoxicity, 8:30559 (J:US)

CELL MEMBRANES
Structural Chemical Analysis
Lipid composition of a plasma membrane enriched fraction of maize roots, 8:30416 (J:GB)

CELL NUCLEI
Radionuclide Kinetics
The turnover of tritium in cell nuclei, chromatin, DNA, and histone, 8:30520 (J:US)

CELLS (ANIMAL)
See ANIMAL CELLS

CELLS (BACTERIAL)
See BACTERIA

CELLS (REACTOR)
See REACTOR CELLS

CELLULOSE
Liquefaction
Conversion of cellulosic wastes to liquid fuels, 8:29301 (R:US)
Formation of aromatic compounds from condensation reactions of cellulose degradation products, 8:29330 (J:GB)
Pyrolysis
Identification by gas-liquid chromatography-mass spectrometry of low-molecular-weight products from the aqueous alkaline degradation of cellulose, 8:30061 (J:NL)

CEMENTS
See also PORTLAND CEMENT
Chemical Composition
Characterization of flyashes, 8:28823 (RA:US)
Chemical Reactions
Characterization of flyashes, 8:28823 (RA:US)
Compression Strength
Flyash in cement pastes - some effects of particle size and distribution, 8:28852 (RA:US)
Hydration reactions in flyash-Portland cements, 8:28844 (RA:US)
Natural pozzolanas and fly ashes: analogies and differences, 8:28847 (RA:US)
Hydration
Combined lime and specific surface area of the hydration products of lime-pozzolana and lime-fly ash mixes, 8:28848 (RA:US)
Mechanical Properties
Pore structure formation during hydration of fly-ash and slag cement blends, 8:28846 (RA:US)
Microstructure
Pore structure formation during hydration of fly-ash and slag cement blends, 8:28846 (RA:US)
Waste Product Utilization
Natural pozzolanas and fly ashes: analogies and differences, 8:28847 (RA:US)

CENTRAL HEATING PLANTS
Cogeneration
Pacific Gas and Electric Company case study: summary of technical details, 8:29512 (RA:US)
Performance
Use of coal for urban district heating, 8:29853 (R:XU)

CENTRAL RECEIVERS
Performance Testing
10-MWe solar-thermal central-receiver pilot-plant receiver steam generation (Test 1030) evaluation report, 8:29352 (R:US)
Steam Generation
10-MWe solar-thermal central-receiver pilot-plant receiver steam generation (Test 1030) evaluation report, 8:29352 (R:US)

CENTRIFUGAL PUMPS
Design
Coal-slurry pump development. Technical progress report No. 42, 8:28799 (R:US)
Fabrication
Coal-slurry pump development. Technical progress report No. 42, 8:28799 (R:US)

Performance
Coal-slurry pump development. Technical progress report No. 42, 8:28799 (R:US)
Performance Testing
Coal-slurry pump development. Technical progress report No. 42, 8:28799 (R:US)
CENTRIFUGES
See also GAS CENTRIFUGES
Baffles
Flow over circular weirs in a centrifugal field, 8:29114 (J:CA)
Monitoring
Maintenance of coal slurry dewatering equipment and the application of a Predix diagnostic system, 8:28965 (BA:US)
Performance Testing
ETSI Coal Evaluation Plant, 8:28920 (BA:US)
CERAMIC MELTERS
Design
High-level waste vitrification technique in a full-scale pilot plant, 8:29179 (BA:US)
CERAMICS
Grinding
Contribution to the question of laboratory mills, 8:29927 (TJ:US)
Leaching
Flow model for the kinetics of dissolution of nuclear waste forms; a comparison of borosilicate glass, SYNROC and high-silica glass, 8:29225 (BA:US)
Leaching of natural and synthetic sphene and perovskite, 8:29938 (BA:US)
SIMS depth profiling studies of sphene-based ceramics and glass ceramics leached in synthetic groundwater, 8:29937 (BA:US)
Meetings
Energy Materials Coordinating Committee (EMACC) contractors meeting on problems and opportunities in structural ceramics, 8:29929 (R:US)
Microanalysis
Background fitting for electron energy loss spectra, 8:29997 (BA:US)
Pyroelectric Effect
Demonstration of scientific and economic feasibility of a solid-state heat engine. Final report, November 7, 1977-September 30, 1982, 8:29795 (R:US)
CERIUM
Radiation Scattering Analysis
Utilization of charged particle backscattering to study the near surface region of glasses. Application to depth profiling of lanthanium, cerium, throium and uranium induced by aqueous leaching, 8:29994 (BA:US)
CERIUM 144
Energy Levels
IBA calculations near the Z=64 subshell, 8:30761 (J:NL)
Inhalation
Effects of repeated inhalation exposure of rats to aerosols of $^{144}CeO_2$: a preliminary report, 8:30506 (RA:US)
CERIUM OXIDES
Inhalation
Effects of repeated inhalation exposure of rats to aerosols of $^{144}CeO_2$: a preliminary report, 8:30506 (RA:US)
CERRO PRIETO GEOTHERMAL FIELD
Ground Subsidence
Physical processes of subsidence in geothermal reservoirs, 8:29445 (R:US)
CESIUM
Ion Exchange
Phenolic cation-exchange resin material for recovery of cesium and strontium (Patent application), 8:29173 (P:US)
Leaching
Leaching behavior of sintered modified SYNROC-B waste forms: effect of HLW addition, 8:29196 (BA:US)
Membrane Transport
Transport of alkali metal cations across liquid membranes by crown ether carboxylic acids, 8:29995 (J:NL)
Precipitation
Precipitation-adsorption process for the decontamination of nuclear waste supernates (Patent), 8:29172 (P:US)
Precipitation process for supernate decontamination, 8:29127 (R:US)
Separation Processes
Transport of alkali metal cations across liquid membranes by crown ether carboxylic acids, 8:29995 (J:NL)
CESIUM 133 TARGET
Neutron Reactions
Gamma-rays from radiative capture reactions in ^{133}Ca, ^{191}Ta and ^{197}Au, 8:30753 (RA:US)
Status of recent fast capture cross section evaluations for important fission product nuclides, 8:30756 (RA:US)
CESIUM 134
Lung Clearance
Retention of relatively insoluble particles inhaled by dogs, rats and mice, 8:30504 (RA:US)
Tissue Distribution
Retention of relatively insoluble particles inhaled by dogs, rats and mice, 8:30504 (RA:US)
CESIUM 137
Ion Exchange
Development of partitioning method - cold and semihot experimental works with partitioning testing apparatus, 8:29130 (R:JP:In Japanese)
Radioecological Concentration
Investigation of radionuclide concentrations in tissues of elk utilizing Los Alamos National Laboratory lands, 8:30364 (RA:US)
CESIUM CHLORIDES
Solvent Properties
Solubility of antimony metal in molten antimony (III) chloride-aluminum chloride and antimony (III) chloride-cesium chloride mixtures, 8:30029 (J:GB)
CHALKS
See LIMESTONE
CHARGE CONJUGATION INVARIANCE
See C INVARIANCE
CHARGED-PARTICLE TRANSPORT THEORY
Discrete Ordinate Method
Advances in discrete-ordinates electron transport, 8:30799 (J:US)
CHARMED BARYON RESONANCES
Photoproduction
Inclusive photoproduction of charmed hadrons in VMD, 8:30683 (R:SU)
CHARPAK CHAMBERS
See MULTIWIRE PROPORTIONAL CHAMBERS
CHARS
Combustion
Basic combustion and pollutant-formation processes for pulverized fuels. Quarterly technical progress report No. 10, 1 January 1983-31 March 1983, 8:28968 (R:US)
Comparative Evaluations
Basic combustion and pollutant-formation processes for pulverized fuels. Quarterly technical progress report No. 10, 1 January 1983-31 March 1983, 8:28968 (R:US)
Leaching
Environmental evaluation of the University of Minnesota-Duluth coal gasifier, 8:28874 (R:US)
Sorptive Properties
Low-energy process for separating hydrogen and methane in advanced coal-gasification processes. Final report, September 8, 1980-January 7, 1983, 8:28801 (R:US)
CHEMICAL ANALYSIS
Manuals
EML procedures manual, 8:29983 (R:US)
CHEMICAL EFFLUENTS
Mutagenesis
Mutagenic and toxic activity of environmental effluents from underground coal gasification experiments, 8:30577 (J:US)
Toxicity
Mutagenic and toxic activity of environmental effluents from underground coal gasification experiments, 8:30577 (J:US)
CHEMICAL EXPLOSIVES
Computerized Simulation
Shock initiation of high explosives, 8:30320 (RA:US)

Detonation Waves
Description of a shock-wave velocity barrier, 8:30321 (J:DE)
Performance Testing
Recent studies of airblast from buried charges, for environmental charges, for environmental protection from HEST events, 8:30318 (R:US)
Research Programs
Energy and Technology Review, 8:30319 (R:US)
Sensitivity
Shock initiation of high explosives, 8:30320 (RA:US)

CHEMICAL INDUSTRY
Energy Conservation
New concepts reduce process energy, 8:29831 (J:US)

CHEMICAL MUTAGENS

CHROMOSOMAL ABERRATIONS
Age Dependence
Age dependence of chromosome aberration induction, 8:30477 (RA:DE)
Bioassay
Screening human populations for chromosome damage. Progress report, March 1982-November 1982, 8:30474 (R:US)
Biological Dosemeters
Applicability of different aberration types for cytogenetic dosimetry, 8:30478 (RA:DE)
Chromosome dosimetry valorization by hematological data, 8:30485 (RA:DE)
Improved quantitation of chromosome aberration estimates using the FPG technique, 8:30476 (RA:DE)
Dose-Response Relationships
Analysis of dose-response relations after X-irradiation of different human lymphocyte fractions, 8:30479 (RA:DE)
Chromosome aberrations in peripheral blood lymphocytes after controlled partial gamma-ray exposure in rabbits, 8:30480 (RA:DE)
Cytogenetic study of A-bomb survivors of Hiroshima and Nagasaki, 8:30481 (RA:DE)
Frequency of chromosome aberrations found in peripheral blood lymphocytes of men servicing nuclear powered submarines, 8:30482 (RA:DE)
Improved quantitation of chromosome aberration estimates using the FPG technique, 8:30476 (RA:DE)
Screening human populations for chromosome damage. Progress report, March 1982-November 1982, 8:30474 (R:US)
Measuring Methods
Flow analysis of karyotype instability, 8:30425 (RA:US)
Radioinduction
Age dependence of chromosome aberration induction, 8:30477 (RA:DE)
Screening
Screening human populations for chromosome damage. Progress report, March 1982-November 1982, 8:30474 (R:US)
Statistics
Statistical aspects of cytogenetic dosimetry, 8:30487 (RA:DE)

CHROMOSOME ABERRATIONS
See CHROMOSOMAL ABERRATIONS

CHROMOSOME EXCHANGES

COAL
See also SUBBITUMINOUS COAL
Calorific Value
Alaskan coal projects and development plans, 8:28884 (RA:US)
Analysis of tipple and delivered samples of coal collected during fiscal year 1981 (Approximately 2200 samples from 15 states), 8:28834 (R:US)
Carbonization
34th meeting of the International Committee for Coal Petrology, Pau, France: and aspects of carbonisation and petrographic research at selected centres in Europe, 8:28822 (R:AU)
Chemical Composition
Analysis of tipple and delivered samples of coal collected during fiscal year 1981 (Approximately 2200 samples from 15 states), 8:28834 (R:US)
Cleaning
Coal preparation for synfuels: where do we stand, 8:28911 (J:US)
Coking
Relationship between properties of coke oven blends and coke product, 8:28811 (R:XE)
Comparative Evaluations
Depolymerization of coals in hot pyridine, 8:28833 (RA:US)
Cost
Coal-fired power-plant cost estimates, 8:29492 (R:US)
Depolymerization
Depolymerization of coal by direct solvent attack. Semi-annual report for the period September 1, 1982-March 30, 1983, 8:28832 (R:US)
Depolymerization of coals in hot pyridine, 8:28833 (RA:US)
Energy Consumption
Quarterly coal report, October-December 1982, 8:28978 (R:US)
Exports
Alaska-coal industry forecasting, 8:28974 (RA:US)
Alaska-environmental policies related to coal mining, 8:28883 (RA:US)
Alaska's competitors in the Pacific steam coal market, 8:28886 (RA:US)
Alaska-state government policies (Government policies), 8:28983 (RA:US)
Alaskan coal projects and development plans, 8:28884 (RA:US)
Impact of ocean transportation and ports on the marketing of Alaskan coal in the Pacific Rim, 8:28908 (RA:US)
Pacific Rim steam coal demand, 8:28972 (RA:US)
Quarterly coal report, October-December 1982, 8:28978 (R:US)
Rail transport of Alaskan coal, 8:28907 (RA:US)
The present situation and future of Canadian coal, 8:28980 (J:JP:In Japanese)
Fluidized-Bed Combustion
Design of a 6- by 6-foot coal-fired heater for a CCGT air heater, 8:29520 (J:US)
IEA Grimethorpe Pressurized Fluidized-Bed Test Facility Test Series One report, 8:29497 (R:US)
Report to the IEA AFBC technical meeting at Petten, Netherlands, May 1982: TNO's environmental program on fluidized bed combustion, 8:28868 (R:NL)
Ground Disposal
Stabilization of fine-coal-refuse slurry through use of cement-type additives, 8:28872 (J:US)
Harbors
Impact of ocean transportation and ports on the marketing of Alaskan coal in the Pacific Rim, 8:28908 (RA:US)
Hydraulic Transport
Coal slurry shiploading world trade applications, 8:28928 (BA:US)
Hydraulic transport of coal suspensions with coarse particles (Particle size 0 to 8 mm), 8:28925 (BA:US)
Integration of mine dewatering installations with a hydraulic hoisting system, 8:28927 (BA:US)
Maintenance of coal slurry dewatering equipment and the application of a Predix diagnostic system, 8:28965 (BA:US)
Novel slurry transport medium, 8:28963 (BA:US)
Overview of proposed coal slurry technologies and their cost-saving applications, 8:28941 (BA:US)
Prediction of size degradation of coarse coal during slurry pipeline transportation, 8:28961 (BA:US)
Removal of fines from recirculation water in a coal slurry system, 8:28962 (BA:US)
Seventh international technical conference on slurry transportation. Proceedings, 8:28912 (B:US)
Survey of coarse coal slurries (0 to 50 mm size of coal), 8:28926 (BA:US)
Technical aspects of shiploading coal slurries, 8:28923 (BA:US)
Hydrogenation
34th meeting of the International Committee for Coal Petrology, Pau, France: and aspects of carbonisation and petrographic research at selected centres in Europe, 8:28822 (R:AU)
Up-grading of coal through hydrogenation, 8:28812 (R:XE:In German)
Imports
Impact of ocean transportation and ports on the marketing of Alaskan coal in the Pacific Rim, 8:28908 (RA:US)
Quarterly coal report, October-December 1982, 8:28978 (R:US)
Maritime Transport
Rail transport of Alaskan coal, 8:28907 (RA:US)
Market
Alaska coal marketing conference: proceedings, 8:28971 (R:US)
Alaska's coal resources, 8:28876 (RA:US)
Alaska's competitors in the Pacific steam coal market, 8:28886 (RA:US)
Pacific Rim steam coal demand, 8:28972 (RA:US)
Marketing
Alaska-state government policies (Government policies), 8:28983 (RA:US)
Alaskan coal projects and development plans, 8:28884 (RA:US)

Impact of ocean transportation and ports on the marketing of Alaskan coal in the Pacific Rim, 8:28908 (RA:US)
Mechanical Properties
Relationship between properties of coke oven blends and coke product, 8:28811 (R:XE)
Meetings
34th meeting of the International Committee for Coal Petrology, Pau, France: and aspects of carbonisation and petrographic research at selected centres in Europe, 8:28822 (R:AU)
Mixing
Controlling bulk inventories for slurry preparation, 8:28944 (BA:US)
Incident report: performance of the Fuel Preparation Plant to June 1982, 8:28909 (R:US)
Petrography
34th meeting of the International Committee for Coal Petrology, Pau, France: and aspects of carbonisation and petrographic research at selected centres in Europe, 8:28822 (R:AU)
Petrographic characterization of Kentucky coals. Quarterly progress report, December 1982 to February 1983, 8:28828 (R:US)
Pneumatic Transport
Incident report: performance of the Fuel Preparation Plant to June 1982, 8:28909 (R:US)
Prices
Cost and quality of fuels for electric utility plants (December 1982), 8:29496 (R:US)
Quarterly coal report, October-December 1982, 8:28978 (R:US)
Production
Quarterly coal report, October-December 1982, 8:28978 (R:US)
The role of coal in supplying the ECE region with energy and raw materials in the light of new techniques of coal conversion and utilization, 8:28979 (R:XU)
Rail Transport
Proposed Navajo Railroad Project. Final environmental impact statement, 8:30397 (R:US)
Rail transport of Alaskan coal, 8:28907 (RA:US)
Research Programs
34th meeting of the International Committee for Coal Petrology, Pau, France: and aspects of carbonisation and petrographic research at selected centres in Europe, 8:28822 (R:AU)
University of Alaska coal research project, 8:28789 (RA:US)
Rheology
Methacoal fuels, or coal-alcohol slurry fuels, an entree for methanol to world markets, 8:28977 (RA:US)
Solvolysis
Depolymerization of coal by direct solvent attack. Semi-annual report for the period September 1, 1982-March 30, 1983, 8:28832 (R:US)
Sorptive Properties
Prediction of size degradation of coarse coal during slurry pipeline transportation, 8:28961 (BA:US)
Stockpiles
Quarterly coal report, October-December 1982, 8:28978 (R:US)
Storage
Controlling bulk inventories for slurry preparation, 8:28944 (BA:US)
Supercritical Gas Extraction
Depolymerization of coal by direct solvent attack. Semi-annual report for the period September 1, 1982-March 30, 1983, 8:28832 (R:US)
Supply and Demand
The present situation and future of Canadian coal, 8:28980 (J:JP:In Japanese)
Swelling
Analysis of tipple and delivered samples of coal collected during fiscal year 1981 (Approximately 2200 samples from 15 states), 8:28834 (R:US)
Test Facilities
University of Alaska coal research project, 8:28789 (RA:US)
Transport
Alaska-environmental policies related to coal mining, 8:28883 (RA:US)
Alaskan coal projects and development plans, 8:28884 (RA:US)
Coal transportation: the economic alternatives, 8:28940 (BA:US)
Coal transport chain: a cost and energy analysis of two technical systems: a slurry system vs a conventional bulk transport system (Mine to port + maritime transport + port to power plant: slurry vs present bulk method: energy and economic analysis), 8:28945 (BA:US)
Development of coal/liquid CO_2 slurry transportation: current status, 8:28939 (BA:US)
The present situation and future of Canadian coal, 8:28980 (J:JP:In Japanese)
Water quality as a factor in the reuse and disposal of coal slurry water, 8:28946 (BA:US)
Uses
Use of coal for urban district heating, 8:29853 (R:XU)
Water Removal
Maintenance of coal slurry dewatering equipment and the application of a Predix diagnostic system, 8:28965 (BA:US)
Seventh international technical conference on slurry transportation. Proceedings, 8:28912 (B:US)
Technical aspects of shiploading coal slurries, 8:28923 (BA:US)

Taxes
Taxing Alaskan oil, 8:28984 (RA:US)

COAL FINES
Combustion
Pulverized-coal burner with low NO/sub x/ emission, 8:28970 (TJ:GB)

COAL GAS
Cleaning
Pollutants from coal conversion processes. Sixth progress report, 1 December 1982-28 February 1983, 8:28804 (R:US)

COAL GASIFICATION
See also BI-GAS PROCESS
CS-R PROCESS
EXXON GASIFICATION PROCESS
HYGAS PROCESS
PEATGAS PROCESS
U-GAS PROCESS
WESTINGHOUSE GASIFICATION PROCESS
Catalysts
Calcium silicate cement sorbent for H_2S removal and improved gasification processes. Annual progress report, October 1, 1981-September 30, 1982, 8:28791 (R:US)
Economics
Coal: the fuel of the future, 8:28790 (RA:US)
Environmental Impacts
Development of environment assessment screening criteria for coal conversion solid wastes. Final draft report, 8:28981 (R:US)
Health and environmental studies of coal gasification process streams and effluents, 8:28875 (BA:US)
Gaseous Wastes
Pollutants from coal conversion processes. Sixth progress report, 1 December 1982-28 February 1983, 8:28804 (R:US)
Health Hazards
Development of environment assessment screening criteria for coal conversion solid wastes. Final draft report, 8:28981 (R:US)

Health and environmental studies of coal gasification process streams and effluents, 8:28875 (BA:US)
In-Situ Gasification
Method for gasification of deep, thin coal seams (Patent), 8:28818 (P:US)
Material Balance
Pollutants from coal conversion processes. Sixth progress report, 1 December 1982-28 February 1983, 8:28804 (R:US)
Mathematical Models
Pollutants from coal conversion processes. Sixth progress report, 1 December 1982-28 February 1983, 8:28804 (R:US)
Research Programs
Engineering support services for the DOE/GRI Coal Gasification Research Program. Quarterly technical progress report for the period October-December 1979, 8:28796 (R:US)
Reviews
Coal: the fuel of the future, 8:28790 (RA:US)
Scrubbing
Process for separating coal synthesized methane from unreacted intermediate and contaminant gases (Patent), 8:28817 (P:US)
Solid Wastes
Development of environment assessment screening criteria for coal conversion solid wastes. Final draft report, 8:28981 (R:US)
Waste Water
Processing needs and methodology for contaminated water streams from synfuels processes (Low-temperature coal gasification, direct coal liquefaction and oil shale retorting processes), 8:28866 (R:US)

COAL GASIFICATION PLANTS
Design
Technical and economic assessment of the IGT peat-gasification process. Engineering support services for the DOE/GRI Coal Gasification Research Program, 8:28794 (R:US)
Environmental Impacts
Environmental evaluation of the University of Minnesota-Duluth coal gasifier, 8:28874 (R:US)
Evaluation
Technical and economic assessment of the IGT peat-gasification process. Engineering support services for the DOE/GRI Coal Gasification Research Program, 8:28794 (R:US)
Hoppers
Lockhopper valve testing and development program, 8:28803 (R:US)
Liquid Wastes
Unsaturated flow modeling as applied to field problems, 8:30591 (RA:US)
Materials
AR and TD Fossil Energy Materials Program. Quarterly progress report for the period ending December 31, 1982, 8:28814 (R:US)
Refractories
AR and TD Fossil Energy Materials Program. Quarterly progress report for the period ending December 31, 1982, 8:28814 (R:US)
Solid Wastes
Environmental evaluation of the University of Minnesota-Duluth coal gasifier, 8:28874 (R:US)
Valves
Lockhopper valve testing and development program, 8:28803 (R:US)
Water Pollution Control
Processing needs and methodology for contaminated water streams from synfuels processes (Low-temperature coal gasification, direct coal liquefaction and oil shale retorting processes), 8:28866 (R:US)

COAL INDUSTRY
Financial Incentives
Legislative priorities for coal development in Alaska, 8:28975 (RA:US)
Manpower
Alaska-coal industry forecasting, 8:28974 (RA:US)
Alaska-labor policies, 8:28973 (RA:US)
Meetings
Alaska coal marketing conference: proceedings, 8:28971 (R:US)
Taxes
Legislative priorities for coal development in Alaska, 8:28975 (RA:US)
Training
Alaska-labor policies, 8:28973 (RA:US)

COAL LIQUEFACTION
See also EXXON LIQUEFACTION PROCESS
H-COAL PROCESS
TSL PROCESS
Continuous process for conversion of coal (Patent), 8:28816 (P:US)
Catalysts
Coal liquefaction in an inorganic-organic medium (Patent), 8:28819 (P:US)
Novel approaches concerning catalyst deactivation. Quarterly report No. 3, January 1, 1982-April 31, 1982, 8:28805 (R:US)
Novel approaches concerning catalyst deactivation. Quarterly report No. 1, May 1, 1981-August 31, 1981, 8:28807 (R:US)
Novel approaches concerning catalyst deactivation. Quarterly report No. 2, September 1, 1981-December 31, 1981, 8:28806 (R:US)
Chemical Feedstocks
Coal preparation for synfuels: where do we stand, 8:28911 (J:US)
Economics
Coal: the fuel of the future, 8:28790 (RA:US)
Environmental Impacts
Development of environment assessment screening criteria for coal conversion solid wastes. Final draft report, 8:28981 (R:US)
Health Hazards
Development of environment assessment screening criteria for coal conversion solid wastes. Final draft report, 8:28981 (R:US)
Organic Solvents
Rheology of coal slurries at process temperatures and pressures, 8:28827 (R:US)
Reviews
Coal: the fuel of the future, 8:28790 (RA:US)
Solid Wastes
Development of environment assessment screening criteria for coal conversion solid wastes. Final draft report, 8:28981 (R:US)
Waste Water
Processing needs and methodology for contaminated water streams from synfuels processes (Low-temperature coal gasification, direct coal liquefaction and oil shale retorting processes), 8:28866 (R:US)
Yields
Depolymerization of coals in hot pyridine, 8:28833 (RA:US)

COAL LIQUEFACTION PLANTS
Corrosion
AR and TD Fossil Energy Materials Program. Quarterly progress report for the period ending December 31, 1982, 8:28814 (R:US)
Materials
AR and TD Fossil Energy Materials Program. Quarterly progress report for the period ending December 31, 1982, 8:28814 (R:US)
Valves
Material coatings for valves: coal-liquefaction components and instrumentation. Final report, October 1, 1981-September 30, 1982, 8:28815 (R:US)
Water Pollution Control
Processing needs and methodology for contaminated water streams from synfuels processes (Low-temperature coal gasification, direct coal liquefaction and oil shale retorting processes), 8:28866 (R:US)

COAL LIQUIDS
Chemical Analysis
Identification and quantification of polynuclear aromatic compounds in synthoil by room-temperature phosphorimetry, 8:28836 (J:NL)

Combustion Properties
Combustion of medium heating value coal gas at turbine operating conditions, 8:28820 (J:US)
Corrosive Effects
AR and TD Fossil Energy Materials Program. Quarterly progress report for the period ending December 31, 1982, 8:28814 (R:US)
Equations of State
Study of the application of the local composition model for the MPCS-MBWR equation of state for mixture, 8:28830 (RA:US)
Mutagen Screening
Genotoxicity of natural and synthetic oils in the Ames/Salmonella test, 8:29082 (RA:US)
Thermodynamic Properties
Correlations for estimating critical constants, acentric factor, structure factor, and dipole moment for undefined fractions (Corresponding states thermophysical properties; data are given for many more complex compounds than those indexed), 8:28831 (RA:US)
Development of a thermodynamic properties correlation framework for the coal conversion industry. Phase III. Third semi-annual report, September 1, 1982-February 28, 1983 (Modification of petroleum product correlations to take care of polar and association effects), 8:28829 (R:US)
Study of the application of the local composition model for the MPCS-MBWR equation of state for mixture, 8:28830 (RA:US)
Toxicity
Genotoxicity of natural and synthetic oils in the Ames/Salmonella test, 8:29082 (RA:US)

COAL MINERS
Productivity
Causes and effects of escalating prices for deep-mine machinery, 8:28898 (R:US)

COAL MINES
Joint venture opportunities for the development of Alaska coal resources (Discussion of joint venture partners for financing), 8:28885 (RA:US)
Accounting
Causes and effects of escalating prices for deep-mine machinery, 8:28898 (R:US)
Construction
Manpower considerations for the development and operation of large scale surface coal mines, 8:28882 (RA:US)
Cutting Tools
Powered hand tools, 8:28902 (B:GB)
Depreciation
Causes and effects of escalating prices for deep-mine machinery, 8:28898 (R:US)
Economics
Causes and effects of escalating prices for deep-mine machinery, 8:28898 (R:US)
Feasibility Studies
Alaska-environmental policies related to coal mining, 8:28883 (RA:US)
Alaskan coal projects and development plans, 8:28884 (RA:US)
Joint venture opportunities in Alaskan coal development (Cook Inlet; financing by joint venture), 8:28877 (RA:US)
Financing
International financing of Alaska coal ventures, 8:28976 (RA:US)
Investment
Causes and effects of escalating prices for deep-mine machinery, 8:28898 (R:US)
Market
Causes and effects of escalating prices for deep-mine machinery, 8:28898 (R:US)
Mining Equipment
Alaskan coal projects and development plans, 8:28884 (RA:US)
Operation
Manpower considerations for the development and operation of large scale surface coal mines, 8:28882 (RA:US)
Permit Applications
Alaska-environmental policies related to coal mining, 8:28883 (RA:US)
Analysis of environmental regulations pertaining to coal mining and export facilities in Alaska (16 critical permits are listed), 8:28985 (RA:US)
Planning
Alaskan coal projects and development plans, 8:28884 (RA:US)
Production
Concentration indices in the European coal industries, 8:28891 (R:XU)
Regulations
Causes and effects of escalating prices for deep-mine machinery, 8:28898 (R:US)
Taxes
Alaska-environmental policies related to coal mining, 8:28883 (RA:US)

COAL MINING
Environmental Effects
Environmental quality in Sydney and northeast industrial Cape Breton, Nova Scotia, 8:28873 (R:CA)

COAL PREPARATION
Feasibility Studies
Reliability of using channel samples to represent run-of-mine coal washability, 8:28910 (R:US)
Flowsheets
Incident report: performance of the Fuel Preparation Plant to June 1982, 8:28909 (R:US)
Performance
Reliability of using channel samples to represent run-of-mine coal washability, 8:28910 (R:US)
Waste Water
Control by alkaline neutralization of trace elements in acidic coal cleaning waste leachates, 8:28869 (J:US)

COAL PREPARATION PLANTS
Operation
Incident report: performance of the Fuel Preparation Plant to June 1982, 8:28909 (R:US)
Performance
Incident report: performance of the Fuel Preparation Plant to June 1982, 8:28909 (R:US)

COAL SEAMS
Degassing
Methane modeling: predicting the inflow of methane gas into coal mines. Quarterly technical progress report, October 1, 1982-December 31, 1982, 8:28888 (R:US)
Rock Mechanics
Rock mechanics design criteria for longwall mining at Angus Place colliery, 8:28880 (R:AU)
Sampling
Reliability of using channel samples to represent run-of-mine coal washability, 8:28910 (R:US)
Stress Analysis
Rock mechanics design criteria for longwall mining at Angus Place colliery, 8:28880 (R:AU)

COAL TAR
Toxicity
Health and environmental studies of coal gasification process streams and effluents, 8:28875 (BA:US)

COAL TAR OILS
Toxicity
Health and environmental studies of coal gasification process streams and effluents, 8:28875 (BA:US)

COAL-DERIVED LIQUIDS
See COAL LIQUIDS

COAL-FIRED GAS TURBINES
Previous to February 1980 this concept was indexed to GAS TURBINES.
Helical Rotary Screw Expander
Chemical vapor deposition of sialon (Patent), 8:28969 (P:US)

COAL-FIRED MHD GENERATORS
Boilers
Design characteristics of an MHD radiant-boiler experiment, 8:29779 (R:US)
Parametric Analysis
Parametric analysis of closed-cycle magnetohydrodynamic (MHD) power plants, 8:29780 (R:US)

COAL-OIL MIXTURES
See COAL

FUEL OILS
FUEL SLURRIES
COASTAL REGIONS
Meteorology
Dispersion coefficients for coastal regions, 8:29692 (R:US)
Variation of turbulence within the TIBL, 8:30323 (R:US)
Topography
Dispersion coefficients for coastal regions, 8:29692 (R:US)
COBALT
Chlorination
Chlorination of cobalt in an argon-1% oxygen-1% chlorine mixture at 1000°K, 8:29876 (R:US)
Corrosion
Chlorination of cobalt in an argon-1% oxygen-1% chlorine mixture at 1000°K, 8:29876 (R:US)
High-temperature corrosion of metals in argon-oxygen-chlorine mixture, 8:29875 (R:US)
X-Ray Diffraction
Anomalous scattering by cobalt and chlorine and crystal structure of (+)-tris(ethylenediamine)cobalt(III) chloride (+)-tartrate pentahydrate, 8:30035 (J:DK)
COBALT 57
Lung Clearance
Long term lung retention after inhalation of cobalt-oxide and cobalt-nitrate aerosols, 8:30505 (RA:US)
Retention Functions
Long term lung retention after inhalation of cobalt-oxide and cobalt-nitrate aerosols, 8:30505 (RA:US)
COBALT 58
Radioecological Concentration
Sewage sludge as a sensitive indicator for airborne radionuclides from nuclear power plants. Studies of distribution and behaviour of activation products in the terrestrial environment, 8:29621 (R:SE)
COBALT 60
Radioecological Concentration
Sewage sludge as a sensitive indicator for airborne radionuclides from nuclear power plants. Studies of distribution and behaviour of activation products in the terrestrial environment, 8:29621 (R:SE)
COBALT BASE ALLOYS
Corrosion Resistance
Protective coatings for utility gas turbines. Final report, 8:29878 (R:US)
COBALT COMPLEXES
Chemical Reactions
Nuclear, electronic, and frequency factors in electron-transfer reactions, 8:30014 (J:US)
Triclinic Lattices
Anomalous scattering by cobalt and chlorine and crystal structure of (+)-tris(ethylenediamine)cobalt(III) chloride (+)-tartrate pentahydrate, 8:30035 (J:DK)
COBALT NITRATES
Lung Clearance
Long term lung retention after inhalation of cobalt-oxide and cobalt-nitrate aerosols, 8:30505 (RA:US)
Retention Functions
Long term lung retention after inhalation of cobalt-oxide and cobalt-nitrate aerosols, 8:30505 (RA:US)
COBALT OXIDES
Lung Clearance
Long term lung retention after inhalation of cobalt-oxide and cobalt-nitrate aerosols, 8:30505 (RA:US)
Retention Functions
Long term lung retention after inhalation of cobalt-oxide and cobalt-nitrate aerosols, 8:30505 (RA:US)
COEFFICIENT OF PERFORMANCE
Measuring Instruments
Device and method for measuring the coefficient of performance of a heat pump (Patent), 8:29812 (P:US)
COGENERATION
Prior to November 1980, this concept was indexed to CO-GENERATION.
See COGENERATION
Industrial and commercial cogeneration, 8:29854 (R:US)
Economic Analysis
Alabama Power Company case study: summary of technical details, 8:29509 (RA:US)
Cogeneration potential in the Bonneville Power Administration service area. Phase III and Phase IV. Economic analysis. Report RRC-80-R-671, 8:29825 (R:US)
Cogeneration potential in the Bonneville Power Administration service area. Phase III and Phase IV. Economic analysis, 8:29824 (R:US)
Cogeneration Options Evaluation (COPE) model overview, 8:29503 (RA:US)
Evaluation of dual energy use systems (DEUS), 8:29501 (RA:US)
Georgia Power Company cogeneration case study, 8:29505 (RA:US)
Georgia Power Company case study: summary of technical details, 8:29510 (RA:US)
Introduction of PG and E/Kaiser Engineers case study, 8:29506 (RA:US)
Introduction to Carolina Power and Light case study, 8:29507 (RA:US)
Northeast Utilities case study: summary of technical details, 8:29511 (RA:US)
Overview of the COGEN2 model, 8:29508 (RA:US)
Pacific Gas and Electric Company case study: summary of technical details, 8:29512 (RA:US)
Urban integrated industrial cogeneration systems analysis. Phase I, final report. Volume 6. Industrial cogeneration potential in Chicago, 1980 to 2000, 8:29849 (R:US)
Economics
District heating via combined heat and power: a past and future comparison of Europe to the USA, 8:29759 (R:US)
Potential impact of consumer choice on cogenerator's short-run price and output decisions, 8:29837 (R:US)
Feasibility Studies
Electric utility and cogeneration, post-PURPA, 8:29500 (RA:US)
Evaluation of dual energy use systems (DEUS), 8:29501 (RA:US)
Georgia Power Company case study: summary of technical details, 8:29510 (RA:US)
Financing
Introduction to Arkansas Power and Light case study, 8:29504 (RA:US)
Institutional Factors
Cogeneration Options Evaluation (COPE) model overview, 8:29503 (RA:US)
Electric utility and cogeneration, post-PURPA, 8:29500 (RA:US)
Marketing Research
Cogeneration potential in the Bonneville Power Administration service area. Phase I. Technical analysis, 8:29823 (R:US)
Meetings
EPRI cogeneration seminar: proceedings, 8:29760 (R:US)
Optimization
Potential impact of consumer choice on cogenerator's short-run price and output decisions, 8:29837 (R:US)
Payback Period
Introduction to Arkansas Power and Light case study, 8:29504 (RA:US)
Resource Potential
Urban integrated industrial cogeneration systems analysis. Phase I, final report. Volume 6. Industrial cogeneration potential in Chicago, 1980 to 2000, 8:29849 (R:US)
Site Selection
Urban integrated industrial cogeneration systems analysis. Phase I, final report. Volume 2. Selecting and evaluating sites for integrated industrial cogeneration systems in the City of Chicago, 8:29847 (R:US)
Technology Assessment
Evaluation of dual energy use systems (DEUS), 8:29501 (RA:US)
Industrial electrical cogeneration potential in the Bonneville Power Administration service area. Phase 1, technical analysis, 8:29822 (R:US)
Urban integrated industrial cogeneration systems analysis. Phase I, final report. Volume 5. Technology assessment of cogeneration and alternative fuels in Chicago, 8:29848 (R:US)

COGENERATION PLANTS
See DUAL-PURPOSE POWER PLANTS
COILS (ELECTRIC)
See ELECTRIC COILS
COILS (MAGNETIC)
See MAGNET COILS
COKE
Sorptive Properties
Low-energy process for separating hydrogen and methane in advanced coal-gasification processes. Final report, September 8, 1980-January 7, 1983, 8:28801 (R:US)
COKE-OVEN GAS
See COAL GAS
COKING PLANTS
Waste Processing
The purification of coke-oven effluents, 8:28867 (R:XE:In Italian)
COLD NEUTRONS
Neutron Sources
Grooved cold moderator tests, 8:29274 (RA:US)
COLD PLASMA
Electron Rings
Field-reversed configurations with a component of energetic particles, 8:30945 (J:AT)
Ion Rings
Field-reversed configurations with a component of energetic particles, 8:30945 (J:AT)
Open Plasma Devices
Effect of gas recycling and secondary electron emission on the axial power flow in an open-ended device, 8:30873 (J:AT)
COLLAGEN
Quantitative Chemical Analysis
Biochemical and cellular effects of inhalation exposure to oil shale dusts, 8:29081 (RA:US)
COLLECTIVE ACCELERATORS
See also ELECTRON-RING ACCELERATORS
Feasibility Studies
Collective acceleration of ions using high-current relativistic-electron beams. Annual technical progress report, 8:30168 (R:US)
COLLIDING BEAMS
Beam Dynamics
Beam-strahlung effects in e-p collider, 8:30173 (R:US)
Beam Luminosity
Some remarks on performance of very-high-energy colliders, 8:30253 (R:US)
Synchrotron Radiation
Beam-strahlung effects in e-p collider, 8:30173 (R:US)
COLLIERIES
See COAL MINES
COLLOIDS
See also EMULSIONS
Filtration
Separation of biopolymer from fermentation broths, 8:29336 (J:US)
COLOGNE SPIRITS
See ETHANOL
COLOR MODEL
Symmetry Breaking
Effect of scalar partons at short distances in unified theories with spontaneously broken colour symmetry, 8:30708 (R:IT)
COLORADO
Aquifers
Hydrogeology of the Dakota Group aquifer with emphasis on the radium-226 content of its contained ground water, Canon City Embayment, Fremont and Pueblo Counties, Colorado, 8:30391 (R:US)
Coal Deposits
Deep-coal-bed methane potential of the San Juan River coal region, southwestern Colorado, 8:28879 (R:US)
Coal Reserves
Deep-coal-bed methane potential of the San Juan River coal region, southwestern Colorado, 8:28879 (R:US)
Geothermal Resources
Bibliography of geothermal reports in Colorado. Bulletin 44, 8:29424 (R:US)
Meteorology
Meteorological tower data: Grand Junction Tailings Site, Colorado. Final report, January-August 1982, 8:29253 (R:US)
Natural Gas Deposits
Deep-coal-bed methane potential of the San Juan River coal region, southwestern Colorado, 8:28879 (R:US)
COLUMBIA RIVER BASIN
Geologic Faults
Report on geologic remote sensing of the Columbia Plateau, 8:30595 (R:US)
Geology
Report on geologic remote sensing of the Columbia Plateau, 8:30595 (R:US)
COLUMBIUM

COLUMNS (MECHANICAL)
See MECHANICAL STRUCTURES
COMBINED GAS AND STEAM CYCLE POWER PLANTS
See COMBINED-CYCLE POWER PLANTS
COMBINED STEAM-POWER GENERATION
See COGENERATION
COMBINED-CYCLE POWER PLANTS
Prior to March, 1976, the descriptors COMBINED CYCLES and FOSSIL-FUEL POWER PLANTS or THERMAL POWER PLANTS were used for indexing this concept.
Comparative Evaluations
Integrated gasification combined-cycle power plant at Sears Island, Maine: feasibility study. Final report. Volume I (Sears Island, Maine), 8:28809 (R:US)
Integrated gasification combined-cycle power plant at Sears Island, Maine: feasibility study. Final report. Volume II (Sears Island, Maine), 8:28810 (R:US)
Economic Analysis
Introduction to Arkansas Power and Light case study, 8:29504 (RA:US)
Environmental Effects
Integrated gasification combined-cycle power plant at Sears Island, Maine: feasibility study. Final report. Volume II (Sears Island, Maine), 8:28810 (R:US)
Feasibility Studies
Integrated gasification combined-cycle power plant at Sears Island, Maine: feasibility study. Final report. Volume I (Sears Island, Maine), 8:28809 (R:US)
Integrated gasification combined-cycle power plant at Sears Island, Maine: feasibility study. Final report. Volume II (Sears Island, Maine), 8:28810 (R:US)
Fluidized-Bed Combustors
Alkali-metal-vapor removal from pressurized fluidized-bed-combustor flue gas. Annual report, October 1981-September 1982, 8:29526 (R:US)
IEA Grimethorpe Pressurized Fluidized-Bed Test Facility Test Series One report, 8:29497 (R:US)
Test and evaluation of hot gas cleanup devices. Phase I and II. Task I. Technical progress report, October 1, 1982-December 31, 1982, 8:28865 (R:US)
Gas Turbines
High temperature turbine technology program. Phase II. Technology test and support studies. Technical progress report, April 1, 1982-June 30, 1982, 8:29493 (R:US)
High Temperature Turbine Technology Program. Phase II. Technology test and support studies. Technical progress report, July 1, 1982-September 30, 1982, 8:29494 (R:US)
High Temperature Turbine Technology Program. Phase II. Technology test and support studies. Technical progress report, October 1, 1982-December 31, 1982, 8:29495 (R:US)
Performance
Introduction to Arkansas Power and Light case study, 8:29504 (RA:US)
COMBUSTION
See also FLUIDIZED-BED COMBUSTION
IN-SITU COMBUSTION
Research Programs
Turbulent combustion experiments and modeling. Technical progress report, March 31, 1980-June 29, 1980, 8:30163 (R:US)

COMBUSTION CHAMBERS
Design
Enhanced ignition for I.C. engines with premixed gases, 8:29859 (J:US)
Materials
Ceramic boilers: ready for series production in 3 years, 8:29814 (TJ:GB)
Production
Ceramic boilers: ready for series production in 3 years, 8:29814 (TJ:GB)
COMBUSTION KINETICS
Computerized Simulation
Introduction to multidimensional combustion modeling with the CONCHAS-SPRAY computer program, 8:30095 (R:US)
Research Programs
Turbulent combustion experiments and modeling. Technical progress report, September 29, 1980-December 31, 1980, 8:30153 (R:US)
Turbulent combustion experiments and modeling. Technical progress report, April 2, 1981-July 1, 1981, 8:30154 (R:US)
Turbulent combustion experiments and modeling. Technical progress report, July 2, 1981-September 30, 1981, 8:30155 (R:US)
Turbulent combustion experiments and modeling. Technical progress report, January 1, 1982-March 28, 1982, 8:30157 (R:US)
Turbulent combustion experiments and modeling. Technical progress report, March 29, 1982-June 27, 1982, 8:30158 (R:US)
Turbulent combustion experiments and modeling. Technical progress report, January 1, 1979-April 1, 1979, 8:30159 (R:US)
Turbulent combustion experiments and modeling. Technical progress report, July, 2 1979-September 30, 1979, 8:30160 (R:US)
Turbulent combustion experiments and modeling. Technical progress report, January 1, 1980-March 30, 1980, 8:30162 (R:US)
Turbulent combustion experiments and modeling. Technical progress report, March 31, 1980-June 29, 1980, 8:30163 (R:US)
Turbulent combustion experiments and modeling. Technical progress report, June 30, 1980-September 28, 1980, 8:30164 (R:US)
COMBUSTORS
See also FLUIDIZED-BED COMBUSTORS
PULSE COMBUSTORS
Combustion pinhole-camera system, 8:30165 (P:US)
Combustion Kinetics
Turbulent combustion experiments and modeling. Technical progress report, October 1, 1981-December 31, 1981, 8:30156 (R:US)
Turbulent combustion experiments and modeling. Technical progress report, October 1, 1979-December 31, 1979, 8:30161 (R:US)
Design
Combustion of medium heating value coal gas at turbine operating conditions, 8:28820 (J:US)
Turbulent combustion experiments and modeling. Technical progress report, September 29, 1980-December 31, 1980, 8:30153 (R:US)
Turbulent combustion experiments and modeling. Technical progress report, April 2, 1981-July 1, 1981, 8:30154 (R:US)
Turbulent combustion experiments and modeling. Technical progress report, July 2, 1981-September 30, 1981, 8:30155 (R:US)
Turbulent combustion experiments and modeling. Technical progress report, October 1, 1981-December 31, 1981, 8:30156 (R:US)
Turbulent combustion experiments and modeling. Technical progress report, January 1, 1982-March 28, 1982, 8:30157 (R:US)
Turbulent combustion experiments and modeling. Technical progress report, March 29, 1982-June 27, 1982, 8:30158 (R:US)
Turbulent combustion experiments and modeling. Technical progress report, January 1, 1979-April 1, 1979, 8:30159 (R:US)
Turbulent combustion experiments and modeling. Technical progress report, July, 2 1979-September 30, 1979, 8:30160 (R:US)
Turbulent combustion experiments and modeling. Technical progress report, October 1, 1979-December 31, 1979, 8:30161 (R:US)
Turbulent combustion experiments and modeling. Technical progress report, June 30, 1980-September 28, 1980, 8:30164 (R:US)
Operation
Turbulent combustion experiments and modeling. Technical progress report, January 1, 1980-March 30, 1980, 8:30162 (R:US)
Research Programs
Turbulent combustion experiments and modeling. Technical progress report, October 1, 1981-December 31, 1981, 8:30156 (R:US)
Turbulent combustion experiments and modeling. Technical progress report, October 1, 1979-December 31, 1979, 8:30161 (R:US)
Turbulent Flow
Turbulent combustion experiments and modeling. Technical progress report, July, 2 1979-September 30, 1979, 8:30160 (R:US)
COMETS
Measuring Methods
Spacecraft charging and related effects during Halley encounter, 8:30620 (R:US)
COMMERCIAL BUILDINGS
See also SHOPPING CENTERS
Energy Audits
Overview of national residential and small commercial energy-conservation programs, 8:29803 (R:US)
COMMERCIAL DEMONSTRATION FAST REACTOR
See CDFR REACTOR
COMMUNITIES
District Heating
District-heating planning in Minnesota: a community guidebook, 8:29845 (R:US)
COMPACT TORUS
Prior to October 1982, this concept was indexed to THERMONUCLEAR DEVICES or to a particular experiment if known, e.g., REVERSE-FIELD PINCH.
Reviews
Compact fusion reactors, 8:30911 (R:US)
COMPLIANCE
Audits
Status of the Administration's implementation of the Energy Emergency Preparedness Act of 1982, 8:29053 (R:US)
COMPOSITE MATERIALS
Corrosion Protection
Method for preparing surfaces of metal composites having a brittle phase for plating (Patent application), 8:29946 (P:US)
Fatigue
Fatigue testing of low-cost fiberglass composite wind turbine blade materials, 8:29480 (R:US)
Materials Testing
Fatigue testing of low-cost fiberglass composite wind turbine blade materials, 8:29480 (R:US)
Mechanical Properties
Thermomechanical characterization of graphite/polyimide composites, 8:29947 (J:US)
Plating
Method for preparing surfaces of metal composites having a brittle phase for plating (Patent application), 8:29946 (P:US)
COMPOUNDS (ORGANIC)
See ORGANIC COMPOUNDS
COMPRESSED AIR ENERGY STORAGE
Humidity
Subsurface monitoring of reservoir pressure, temperature, relative humidity, and water content at the CAES Field Experiment, Pittsfield, Illinois: system design, 8:29703 (R:US)
Pressure Measurement
Subsurface monitoring of reservoir pressure, temperature, relative humidity, and water content at the CAES Field

Experiment, Pittsfield, Illinois: system design, 8:29703 (R:US)
Reservoir Rock
Pre-test geological and geochemical evaluation of the Caprock, St. Peter Sandstone and formation fluids, Yakley Field, Pike County, Illinois, 8:29517 (R:US)
Temperature Monitoring
Subsurface monitoring of reservoir pressure, temperature, relative humidity, and water content at the CAES Field Experiment, Pittsfield, Illinois: system design, 8:29703 (R:US)
COMPRESSOR BLADES
Aerodynamics
Analysis of three-dimensional transonic compressors, 8:30099 (R:US)
COMPRESSORS
Diffusers
Continuous-diffusion crossover-system design, 8:30100 (R:US)
Transonic Flow
Analysis of three-dimensional transonic compressors, 8:30099 (R:US)
COMPUTED TOMOGRAPHY
See COMPUTERIZED TOMOGRAPHY
COMPUTER CODES
Computer codes are indexed by their initial letter and CODES, e.g., A CODES. If the code name begins with a number the code is indexed to NUMBER CODES.
A Codes
A2F computer code for data preparation to carry out group calculations by the Monte Carlo method on the basis of the ARAMAKO-2F system, 8:30790 (R:SU:In Russian)
ABAQUS-EPGEN: a general-purpose finite element code. Volume 3. Example problems manual, 8:29670 (R:US)
ALPLASMA (aluminum plasma) and XRAD (x-radiation) computer program abstract, 8:31000 (R:US)
ANTHEM: a two-dimensional multicomponent self-consistent hydro-electron transport code for laser-matter interaction studies, 8:30913 (R:US)
B Codes
BLAZER: a RELAP5/MODI post processor to generate force-time history input data for structural computer codes, 8:29701 (J:US)
C Codes
Analysis of three-dimensional transonic compressors (CSCDF22 computer code), 8:30099 (R:US)
On-line entry and analysis of computer center operations logs, 8:31017 (R:US)
D Codes
DIF3D nodal neutronics option for two- and three-dimensional diffusion theory calculations in hexagonal geometry, 8:29574 (R:US)
Nonlinear hydrodynamics. Lecture 9, 8:30616 (R:US)
Overview of the DEUS screening and evaluation model, 8:29502 (RA:US)
F Codes
User's guide to FFE: a fast front end data acquisition program, 8:30918 (R:US)
G Codes
GRAPH: an interactive digitizing and plotting program, 8:31001 (R:US)
H Codes
Software for real time system of the DISK-2 spectrometer for investigation of cumulative particle production, 8:30285 (R:SU:In Russian)
Information Centers
National Energy Software Center: what it is and what it has to offer, 8:31014 (R:US)
Libraries
AELIB user's manual, 8:30982 (R:CA)
National Energy Software Center: what it is and what it has to offer, 8:31014 (R:US)
M Codes
Analysis of density-wave oscillations in ventilated channels (BWR;MAZDA-1F code;MAZDA-4S;MAZDA-4F code), 8:29552 (R:US)
Network formulation of the Midterm Energy Market Model (MEMM). Technical report SOL 80-5, 8:29736 (R:US)
N Codes
NLS: a system identification package for transient signals. Description and user's manual, 8:31004 (R:US)
User instructions for programs NEDIT and NPRED, 8:29057 (R:US)
P Codes
Consumers energy-services model. Technical report SOL 79-16, 8:29742 (R:US)
Detailed sectoral modeling in a dynamic, multisector, welfare-equilibrium framework. Technical report SOL 77-28, 8:29738 (R:US)
Modified aggregation program for the PILOT process integrated model. Technical report SOL 80-31, 8:29735 (R:US)
National energy potential according to PILOT, 8:29737 (R:US)
Progress report on the PILOT energy modeling project. Technical report SOL 77-11, 8:29733 (R:US)
Stanford PILOT energy/economic model. Technical report SOL 77-19, 8:29746 (R:US)
Quality Assurance
Software quality assurance, 8:30984 (R:US)
R Codes
Beam-tracking studies with RINGBEARER II, 8:30195 (R:US)
Calculational limitations in PWR system analysis (RELAP code; RETRAN code; TRAC code), 8:29639 (R:US)
S Codes
Code portability and data management considerations in the SAS3D LMFBR accident-analysis code, 8:29626 (R:US)
GRANAS system for graphic analysis of nuclear spectrometrical data, 8:30996 (R:SU:In Russian)
Program package for creation and updating of the processed events catalogue, 8:30284 (R:SU:In Russian)
Reliability-economics analysis models for photovoltaic power systems. Volume 2 (SOLREL), 8:29349 (R:US)
SCAT2: a spherical optical model code, 8:30777 (R:FR:In French)
SOCLIR: a system for optimal control of linear regulators, 8:30985 (R:US)
SPEAR-BETA fuel-performance code system. COSTF: cost implications analysis postprocessor. Final report, 8:29543 (R:US)
SPEAR-BETA fuel-performance code system. Volume 2 (revision 1). Part 1. Programmer's manuals. Part 2. User's manual, 8:29555 (R:US)
SPEAR-FCODE-GAMMA functional specifications. Final report, 8:29546 (R:US)
T Codes
Calculational limitations in PWR system analysis (RELAP code; RETRAN code; TRAC code), 8:29639 (R:US)
V Codes
Recent improvements to the VDART3 VAWT code, 8:29486 (R:US)
VPXRAY. Analysis of proton-induced x-ray spectra, 8:29984 (R:NZ)
VSEARC. Identify elements in x-ray spectra, 8:29985 (R:NZ)
W Codes
WATCH1 and the WATCH3 programs: vehicles for interpreting chemical analyses of geothermal water. A guide for users, 8:29471 (TG:US)
Welfare equilibrium model (WEM) of energy supply, energy demand, and economic growth. Technical report SOL 79-3, 8:29740 (R:US)
COMPUTER GRAPHICS
Data analysis through interactive computer animation method (DATICAM), 8:29619 (R:US)
Programming
Graphics software: from techniques to principles, 8:31012 (J:US)
COMPUTER NETWORKS
Data Base Management
On-line entry and analysis of computer center operations logs, 8:31017 (R:US)
COMPUTER PROGRAMMING
See PROGRAMMING
COMPUTER PROGRAMS
See COMPUTER CODES

COMPUTER-AIDED DESIGN
Computer Networks
Computer-aided engineering in NESD, 8:31005 (R:US)
COMPUTERIZED TOMOGRAPHY
An imaging technique in which transmission measurements of a narrow beam of rays, photons, or particles made at several different angles around an object may be used with a computer program to obtain a clear image of one plane
J Codes
JETCAT: a programme for computerised tomography, 8:30847 (R:GB)
COMPUTERS
See also CDC COMPUTERS
Cost Benefit Analysis
Model for calculating the optimal replacement interval of computer systems, 8:30995 (R:JP:In Japanese)
Demand Factors
Model for calculating the optimal replacement interval of computer systems, 8:30995 (R:JP:In Japanese)
Educational Facilities
Implications of recent research on human factors for teachers of computing skills, 8:30986 (R:US)
Performance
Quantitative software reliability in nuclear safety, 8:29638 (R:US)
Photovoltaic Power Supplies
Intermediate photovoltaic system application experiment operational performance report for Newman Power Station, El Paso, Texas for December 1982, 8:29342 (R:US)
Programming
Solving open questions with an automated theorem-proving program, 8:30989 (R:US)
Reliability
Quantitative software reliability in nuclear safety, 8:29638 (R:US)
Research Programs
HMI scientific report 1981, 8:30993 (R:DE:In German)
CONCENTRATING COLLECTORS
Design
Development of a focusing solar-collector energy-conversion system. Final report, 8:29420 (R:US)
CONCENTRATOR SOLAR CELLS
Prior to July, 1979 SOLAR CELLS or specific solar cells descriptors and SOLAR CONCENTRATORS were used to index this concept.
Bibliographies
Bibliography of reports by the Sandia Photovoltaic Projects, 8:29322 (R:US)
Design
Development of a 1-pkW photovoltaic concentrator system with silicon cells. Final report, January 1978-Decembr 1979, 8:29312 (R:XE)
High-efficiency photovoltaic cells (Patent), 8:29331 (P:US)
Fabrication
High-efficiency photovoltaic cells (Patent), 8:29331 (P:US)
Performance Testing
Development of a 1-pkW photovoltaic concentrator system with silicon cells. Final report, January 1978-Decembr 1979, 8:29312 (R:XE)
Solar Reflectors
Novel approaches for low-cost photovoltaic concentrator. Final report, January 1978-July 1980, 8:29323 (R:US)
CONCRETES
See also PRESTRESSED CONCRETE
REINFORCED CONCRETE
Activation Energy
Distinction between water reduction and reactivity as the factors influencing flyash performance in concrete, 8:28861 (RA:US)
Chemical Properties
Effects of flyash incorporation in cement and concrete, 8:28837 (R:US)
Compression Strength
Comparative studies of the effects of lignitic and bituminous flyashes in hydrated cement systems, 8:28845 (RA:US)
Distinction between water reduction and reactivity as the factors influencing flyash performance in concrete, 8:28861 (RA:US)
Fly ash concrete under hot weather conditions, 8:28850 (RA:US)
Moisture related movements in OPC/PFA concrete (Ordinary portland cement/pulverized fuel ash concretes), 8:28853 (RA:US)
Properties of fly ash concrete, 8:28854 (RA:US)
Properties of mortars and concrete made with fly ash, 8:28855 (RA:US)
Strength contribution of fly ash concrete - a new approach to its estimation, 8:28851 (RA:US)
Subbituminous fly ash utilization in concrete, 8:28862 (RA:US)
Corrosion Resistance
Properties of fly ash concrete, 8:28854 (RA:US)
Curing
Effect of fly ash on the setting time of concrete - chemical or physical, 8:28849 (RA:US)
Fly ash concrete under hot weather conditions, 8:28850 (RA:US)
Subbituminous fly ash utilization in concrete, 8:28862 (RA:US)
Elasticity
Properties of fly ash concrete, 8:28854 (RA:US)
Properties of mortars and concrete made with fly ash, 8:28855 (RA:US)
Expansion
Moisture related movements in OPC/PFA concrete (Ordinary portland cement/pulverized fuel ash concretes), 8:28853 (RA:US)
Flexural Strength
Moisture related movements in OPC/PFA concrete (Ordinary portland cement/pulverized fuel ash concretes), 8:28853 (RA:US)
Properties of mortars and concrete made with fly ash, 8:28855 (RA:US)
Leaching
Leach and radiolysis data for FUETAP concretes containing SRP wastes, 8:29957 (R:US)
Mechanical Properties
Effects of flyash incorporation in cement and concrete, 8:28837 (R:US)
Performance
Effects of flyash incorporation in cement and concrete, 8:28837 (R:US)
Effects of various types of fly ash on behavior and properties of concrete, 8:28858 (RA:US)
Performance characteristics of concretes containing fly ash, 8:28856 (RA:US)
Physical Properties
Effects of flyash incorporation in cement and concrete, 8:28837 (R:US)
Radiolysis
Leach and radiolysis data for FUETAP concretes containing SRP wastes, 8:29957 (R:US)
Reaction Heat
Properties of fly ash concrete, 8:28854 (RA:US)
Shrinkage
Moisture related movements in OPC/PFA concrete (Ordinary portland cement/pulverized fuel ash concretes), 8:28853 (RA:US)
Properties of fly ash concrete, 8:28854 (RA:US)
Properties of mortars and concrete made with fly ash, 8:28855 (RA:US)
Specifications
American and foreign characterization of fly ash for use in concrete (USA, Canada, India, Japan), 8:28859 (RA:US)
Properties of fly ash used in Germany, 8:28826 (RA:US)
Standards
American and foreign characterization of fly ash for use in concrete (USA, Canada, India, Japan), 8:28859 (RA:US)
Temperature Effects
Fly ash concrete under hot weather conditions, 8:28850 (RA:US)
Uses
Practicalities of concrete for OTEC applications, 8:29368 (RA:US)

Waste Product Utilization
American and foreign characterization of fly ash for use in concrete (USA, Canada, India, Japan), 8:28859 (RA:US)
Effects of flyash incorporation in cement and concrete, 8:28837 (R:US)
Water Requirements
Distinction between water reduction and reactivity as the factors influencing flyash performance in concrete, 8:28861 (RA:US)
Fly ash concrete under hot weather conditions, 8:28850 (RA:US)
Subbituminous fly ash utilization in concrete, 8:28862 (RA:US)
Wear Resistance
Properties of mortars and concrete made with fly ash, 8:28855 (RA:US)

CONDENSED AROMATICS

COPPER
Biological Effects
Effects of copper on the latency of lysosomal hexosaminidase in the digestive cells of Mytilus edulis, 8:30576 (J:DE)
Electron Microscopy
In situ observations of the formation of plastic zone ahead of a crack tip in copper, 8:29922 (J:US)

Microstructure
In situ observations of the formation of plastic zone ahead of a crack tip in copper, 8:29922 (J:US)
Muon Probes
Low-temperature mobility of positive muons in pure copper, 8:30796 (J:US)
Neutron Reactions
Monte Carlo study of the energy deposition of a flux of spallation neutrons in various samples, 8:29281 (RA:US)
Proton Reactions
Possible use of copper spallation reactions to measure high energy particle spectra in shielding experiments, 8:29282 (RA:US)
Solvent Extraction
Kinetic and thermodynamic separation of Cu(II) and Fe(III) by liquid-liquid extraction with a β-hydroxy-oxime in toluene, 8:29996 (J:US)

COPPER ALLOYS
Biological Fouling
Biofouling and corrosion stdies at Keahole Point, Hawaii (1978-1980), 8:29396 (RA:US)
Corrosion
Biofouling and corrosion stdies at Keahole Point, Hawaii (1978-1980), 8:29396 (RA:US)

COPPER COMPLEXES
Chemical Reactions
Kinetic, magnetic and Moessbauer studies on porphyrin systems. Final report, 8:30040 (R:US)

COPPER SULFIDE SOLAR CELLS
Fabrication
Cadmium sulfide/copper sulfide heterojunction cell research. Volume I. Final report, September 1, 1979-March 15, 1982, 8:29328 (R:US)
Performance
Cadmium sulfide/copper sulfide heterojunction cell research. Volume I. Final report, September 1, 1979-March 15, 1982, 8:29328 (R:US)

CORRELATION ENERGY
See ELECTRON CORRELATION

CORROSION
Research Programs
Corrosion Research Center of the University of Minnesota. Progress report, January 1, 1982-December 31, 1982, 8:29873 (R:US)
Overview of the OTEC biofouling, corrosion, and materials program, 8:29389 (RA:US)

CORROSION PRODUCTS
Activity Levels
Primary-side deposits on PWR steam-generator tubes, 8:29563 (R:US)
Chemical Composition
Primary-side deposits on PWR steam-generator tubes, 8:29563 (R:US)

CORUNDUM
Interstitials
Muon spin rotation in antiferromagnetic oxides, 8:29964 (J:US)

COSMIC GAMMA SOURCES
Gamma Detection
Very high energy gamma ray astrophysics, 8:30606 (R:US)

COSMIC GASES
Hydrogen
Kinetics of molecular hydrogen production, thermochemical evolution of protogalaxies primeval matter and properties of the first generation collapsing protostars, 8:30609 (R:SU:In Russian)
Kinetics
Kinetics of molecular hydrogen production, thermochemical evolution of protogalaxies primeval matter and properties of the first generation collapsing protostars, 8:30609 (R:SU:In Russian)
Star Evolution
Kinetics of molecular hydrogen production, thermochemical evolution of protogalaxies primeval matter and properties of the first generation collapsing protostars, 8:30609 (R:SU:In Russian)

COSMIC POSITRONS
Prior to July, 1975 information was indexed to POSITRONS.
Origin
Positrons from supernova and the origin of the galactic-center positron-annihilation radiation, 8:30618 (R:US)

COSMIC X-RAY SOURCES
Scattering
Cataclysmic variables as probes of x-ray properties of interstellar grains, 8:30619 (R:US)

COSMOGONY
See COSMOLOGY

COSMOLOGY
Neutrinos
Underground neutrino astronomy, 8:30607 (R:US)

COSO HOT SPRINGS
Exploratory Wells

COVERINGS
Construction
Application of soil arch and soil beam concepts to the construction of shallow land burial trench covers, 8:29151 (RA:US)
Design
Overview of design considerations for effective trench covers, 8:29149 (RA:US)
Evaluation
Evaluation of geologic materials to limit biological intrusion of low-level waste site covers, 8:29218 (BA:US)
Performance
Application of soil arch and soil beam concepts to the construction of shallow land burial trench covers, 8:29151 (RA:US)
Investigation of layered covers designed to limit infiltration at waste disposal sites, 8:29150 (RA:US)

COW-MILKERS
See RADIOISOTOPE GENERATORS

CRACK GROWTH
See CRACK PROPAGATION

CRACK PROPAGATION
Evaluation
Stress intensity factor due to parallel impact loading of the faces of a crack, 8:29924 (J:US)

CRACKS
Production
Method and apparatus for generating a natural crack, 8:30136 (P:US)

CRATERING EXPLOSIONS
Shock Waves
Recent studies of airblast from buried charges, for environmental charges, for environmental protection from HEST events, 8:30318 (R:US)

CRESOLS
Gas Chromatography
Identification by gas-liquid chromatography-mass spectrometry of low-molecular-weight products from the aqueous alkaline degradation of cellulose, 8:30061 (J:NL)
Liquid Column Chromatography
Identification by gas-liquid chromatography-mass spectrometry of low-molecular-weight products from the aqueous alkaline degradation of cellulose, 8:30061 (J:NL)

Mass Spectroscopy
Identification by gas-liquid chromatography-mass spectrometry of low-molecular-weight products from the aqueous alkaline degradation of cellulose, 8:30061 (J:NL)
Thermodynamic Properties
Correlations for estimating critical constants, acentric factor, structure factor, and dipole moment for undefined fractions, 8:28831 (RA:US)

CRESYLIC ACID
See CRESOLS

CRITICAL FLOW
Control
Experiments on tubes conveying fluid, 8:30127 (R:US)

CRITICAL HEAT FLUX
Correlations
Adaptation of a Freon-12 critical heat flux correlation to correlate water data from uniformly heated vertical tubes. Part I: Based on critical heat flux data for water at pressures of 3 to 14 MPa, 8:30125 (R:AU)
Adaptation of a Freon-12 CHF correlation to apply for water in uniformly heated vertical tubes. Part 2: Based on CHF data for water at pressures in the range 6-20 MPa, 8:30126 (R:AU)
Investigation of critical heat fluxes in vertical tubes internally cooled by Freon-12. Part II - The development of a critical heat flux correlation for uniformly heated tubes, 8:30124 (R:AU)

CROSSED BEAMS
See COLLIDING BEAMS

CROWN ETHERS
See POLYETHYLENE GLYCOLS

CRUDE OIL
See PETROLEUM

CRUSTACEANS
Molting
Ecdysone metabolism in premolt land crabs (Gecarcinus lateralis), 8:30414 (J:US)

CRYOGENIC BUBBLE CHAMBERS
Image Processing
Organization of the processed event catalogue on the basis of direct access files, 8:30283 (R:SU:In Russian)
Program package for creation and updating of the processed events catalogue, 8:30284 (R:SU:In Russian)
Targets
Design, technology of preparation and testing of polycarbonate track sensitive target, 8:30286 (R:SU:In Russian)

CRYOPUMPS
Design
Test of a cryogenic helium pump, 8:30141 (J:US)
Testing
Test of a cryogenic helium pump, 8:30141 (J:US)
Thermal Efficiency
Test of a cryogenic helium pump, 8:30141 (J:US)

CRYSTAL MODELS
For theories only.
Feynman Path Integral
New exactly solvable systems of differential-difference equations, 8:30810 (R:SU:In Russian)

CRYSTAL STRUCTURE
Research Programs
Energy and Technology Review, 8:30319 (R:US)

CRYSTALLINE ROCKS
See IGNEOUS ROCKS
METAMORPHIC ROCKS

CRYSTALS
Grain Orientation
Optical-diffraction method for determining crystal orientation, 8:29334 (P:US)

CS-R PROCESS
Economics
Engineering-support services for the DOE/GRI Coal-Gasification Research Program. Quarterly technical progress report, July-September 1980, 8:28795 (R:US)
Pilot Plants
Engineering support services for the DOE/GRI Coal Gasification Research Program. Quarterly technical progress report for the period October-December 1979, 8:28796 (R:US)

CUCUMBERS
Sensitivity
Resistance to injury by sulfur dioxide, 8:30443 (J:US)

CULTURES (CELLS)
See CELL CULTURES

CURRENT LIMITERS
Design
Transverse-field vacuum interrupter. Volume 2. Development of a vacuum arc current limiter. Phase III: the conceptual design and rating of a 145-kV FCL. Final report, 8:29530 (R:US)
Operation
Transverse-field vacuum interrupter. Volume 2. Development of a vacuum arc current limiter. Phase III: the conceptual design and rating of a 145-kV FCL. Final report, 8:29530 (R:US)

CURRENT-DRIVE HEATING
Mathematical Models
Relativistic two-dimensional theory of rf current drive, 8:30853 (R:US)
Stochastic Processes
Stochasticity induced by coherent wavepackets, 8:30852 (R:US)
Wall Effects
Effect of wall corrugations on lower-hybrid-wave launching and reflection, 8:30894 (R:US)

CURRENTS (WATER)
See WATER CURRENTS

CYANATES
Specific compounds should be indexed by coordination of a descriptor of the form (CATION) COMPOUNDS and the above anion descriptor.
Molecular Structure
Synthesis, structure, electrical conduction properties, and theory of divalent, tetravalent, and one-dimensional partially oxidized tetracyanoplatinate complexes, 8:29980 (BA:US)

CYANOGEN
Photolysis
Partitioning of excess energy in the photolysis of cyanogen chloride and cyanogen bromide at 193 nm, 8:30068 (J:US)

CYCLOALKANES
See also CYCLOHEXANE
Chemical Preparation
Synthesis of new prophylactic antiradiation drugs. Progress report no. 2 (annual), 1 Aug 80-31 Jul 81, 8:30038 (R:US)
Configuration Interaction
Comparison of through-space and through-bond interactions in four-membered ring systems, 8:30048 (J:US)
Interaction of nonbonding orbitals in 1,3-cyclobutanedione systems, 8:30044 (J:US)
Electron Correlation
Comparison of through-space and through-bond interactions in four-membered ring systems, 8:30048 (J:US)
Energy Levels
Interaction of nonbonding orbitals in 1,3-cyclobutanedione systems, 8:30044 (J:US)
Photoionization
Ionization energies and entroples of cycloalkanes. Kinetics of free energy controlled charge-transfer reactions, 8:30051 (J:US)

CYCLOHEXANE
Solvent Properties
Characterization of Cerro Negro crude. Part I. Physical and chemical separations (Project shared by Bartlesville Energy Technology Center, US DOE, and Institute de Tecnologico del Venezolana Petroleo), 8:29055 (J:US)

CYCLOHEXANONE
Gas Chromatography
Identification by gas-liquid chromatography-mass spectrometry of low-molecular-weight products from the aqueous alkaline degradation of cellulose, 8:30061 (J:NL)
Liquid Column Chromatography
Identification by gas-liquid chromatography-mass spectrometry of low-molecular-weight products from the aqueous alkaline degradation of cellulose, 8:30061 (J:NL)

Mass Spectroscopy
Identification by gas-liquid chromatography-mass spectrometry of low-molecular-weight products from the aqueous alkaline degradation of cellulose, 8:30061 (J:NL)
CYLINDERS
Objects of cylindrical shape. For containers see headings such as GAS CYLINDERS.
Failures
Collapse of thick-walled cylinders under external pressure, 8:30137 (J:US)
Mechanical Vibrations
Flow-induced vibration of circular cylindrical structures - 1982, 8:29612 (J:US)
Fluid forces acting on circular cylinders in liquid cross flow, 8:29556 (J:US)
CYLINDRICAL PARABOLIC COLLECTORS
See PARABOLIC TROUGH COLLECTORS
CYTOCHROMES
Buildup
Differential accumulation of two apo-iso-cytochromes c in processing mutants of yeast, 8:30449 (J:US)
CZECHOSLOVAKIA
District Heating
Use of coal for urban district heating, 8:29853 (R:XU)

D

D RESONANCES
Photoproduction
Inclusive photoproduction of charmed hadrons in VMD, 8:30683 (R:SU)
DARK REPAIR
See BIOLOGICAL REPAIR
DARRIEUS ROTORS
Air Flow
Rotationally-sampled flow-field measurements for vertical-axis wind turbines, 8:29485 (R:US)
Computer Codes
Recent improvements to the VDART3 VAWT code, 8:29486 (R:US)
Design
Design and fabrication of a low cost Darrieus vertical axis wind turbine system: Phase II. Volume 1. Executive summary, 8:29487 (R:US)
Fabrication
Design and fabrication of a low cost Darrieus vertical axis wind turbine system: Phase II. Volume 1. Executive summary, 8:29487 (R:US)
DATA ACQUISITION SYSTEMS
Equipment Interfaces
Interface unit for the Y-time mode registrator, 8:30306 (R:PL:In Polish)
DATA ANALYSIS
Interactive Display Devices
Interactive tools for data exploration, 8:31006 (R:US)
DATA BASE MANAGEMENT
Computer Codes
On-line entry and analysis of computer center operations logs, 8:31017 (R:US)
DATA DISPLAY DEVICES
See DISPLAY DEVICES
DATA DISPLAY SYSTEMS

DEUTERIUM
Chemical Reactions
Interaction of CO, CO_2, and D_2 with rhodium oxide: its reduction and catalytic stability, 8:30007 (J:US)
Chemisorption
Interaction of CO, CO_2, and D_2 with rhodium oxide: its reduction and catalytic stability, 8:30007 (J:US)
Energy-Level Transitions
Charge screening effects in mesic molecules of hydrogen isotopes, 8:30641 (R:SU:In Russian)
Isotope Effects
Measurements of single chain form factors by small-angle neutron scattering from polystyrene blends containing high concentrations of labelled molecules, 8:29952 (J:GB)
Isotope Production
Vanadium hydride deuterium-tritium generator (Patent), 8:29266 (P:US)
Muonic Atoms
Hyperfine energy level structure of the Dμ mesoatom and DDμ mesomolecule and kinetics of mesomolecular processes in deuterium, 8:30642 (R:SU:In Russian)
Muonic Molecules
Charge screening effects in mesic molecules of hydrogen isotopes, 8:30641 (R:SU:In Russian)
Hyperfine energy level structure of the Dμ mesoatom and DDμ mesomolecule and kinetics of mesomolecular processes in deuterium, 8:30642 (R:SU:In Russian)
DEUTERIUM COMPOUNDS
Deuteron Reactions
Study and use of the ion beams formed in the Focus experiment, 8:30933 (TG:US)
Fluorescence Spectroscopy
Multiphoton laser-induced-fluorescence studies of simple species, 8:30644 (R:US)
DEUTERIUM HYDRIDE
See HYDROGEN DEUTERIDE
DEUTERIUM IONS
Ion-Atom Collisions
Search for existence of D_2p, D_3^-, and HD_2^- formed in double-electron-capture collisions, 8:30645 (R:US)
Ion-Molecule Collisions
Search for existence of D_2^-, D_3^-, and HD_2^- formed in double-electron-capture collisions, 8:30645 (R:US)
DEUTERIUM OXIDES
See HEAVY WATER
DEUTERIUM-LITHIUM HIGH FLUX NEUTRON SOURC
See NEUTRON SOURCE FACILITIES
DEUTERON BEAMS
Comparative Evaluations
How much thermal neutron flux is gained using deuterons instead of protons, 8:29280 (RA:US)
DEVONIAN SHALES
See BLACK SHALES
DEWATERING
See WATER REMOVAL
DIAL PAINTERS
Radiation Doses
Relative activities of ^{228}Ra and ^{226}Ra in early Illinois radium dial workers, 8:30466 (RA:US)
DIAMONDS
Atom Collisions
Long range interaction between a He atom and a semiconductor surface, 8:30658 (J:NL)
Muon Probes
Temperature dependence of the hyperfine parameters of anomalous muonium in germanium, 8:29960 (J:US)
Muonium
Screening of impurities in semiconductors: muonium in germanium, silicon and diamond, 8:29962 (J:US)
Self-consistent field investigation of location and hyperfine interaction of muonium in diamond, 8:29965 (J:US)
Temperature dependence of the hyperfine parameters of anomalous muonium in germanium, 8:29960 (J:US)
Simulation
Cubic zirconia, the latest diamond imitation and skull melting, 8:29944 (B:US)
DIAPHRAGMS (THERMONUCLEAR DEVICE)
See LIMITERS
DIATOMACEOUS EARTH
In-Situ Combustion
Preliminary study of in-situ combustion in diatomites, 8:29018 (J:US)
DIBENZOPYRROLES
See CARBAZOLES
DIELECTRIC MATERIALS
Breakdown
Evaluation of advanced technologies for power transformers. Final report, Part 2, June 1, 1979-June 30, 1981, 8:29528 (R:US)
DIELECTRICS
See DIELECTRIC MATERIALS
DIESEL FUELS
Prices
Monthly petroleum product price report, 8:29050 (R:US)

DOUBLET 3 DEVICES
See DOUBLET REACTORS
DOUBLET REACTORS
Confinement
Scaling of energy confinement with minor radius, current and density in Doublet III Ohmically heated plasmas, 8:30870 (J:AT)
ECR Heating
60 GHZ transmission system for the Doublet III electron cyclotron heating experiment, 8:30899 (R:US)
Preliminary electron-cyclotron-heating results on Doublet III using an outside launch, 8:30901 (R:US)
ICR Heating
Design of a high-power ICRF experiment for DIII, 8:30900 (R:US)
Magnetic Flux
Volt-second analysis and consumption in Doublet III plasmas, 8:30947 (J:AT)
Poloidal Divertors
Simplified poloidal divertor experiments in Doublet III, 8:30963 (BA:XA)
DOXORUBICIN
Mutagen Screening
Comparative structure-genotoxicity study of three aminoanthraquinone drugs and doxorubicin, 8:30579 (J:US)
Toxicity
Comparative structure-genotoxicity study of three aminoanthraquinone drugs and doxorubicin, 8:30579 (J:US)
DREDGING
Financing
Alaska-coal industry forecasting, 8:28974 (RA:US)
Permit Applications
Alaska-coal industry forecasting, 8:28974 (RA:US)
DRELL MODEL
Hadronic production of massive lepton pairs, 8:30678 (R:US)
Quantum Chromodynamics
Massive lepton pair production: what has QCD done to the classical Drell-Yan model, 8:30677 (R:US)
DRIFT CHAMBERS
Accuracy
Characteristics of half-meter drift chambers operating in self-quenching streamer mode, 8:30290 (R:SU:In Russian)
System of half-meter drift chambers operating in a self-quenching operation mode, 8:30288 (R:SU:In Russian)
Design
Soudan nucleon decay program, 8:30271 (R:US)
Stereo: cylindrical drift chamber for muon decay experiments at LAMPF, 8:30291 (R:US)
Operation
Concept of a solid-state drift chamber, 8:30274 (R:US)
Performance Testing
Electrodeless drift chambers with 50-cm drift distance, 8:30272 (R:US)
Positron Detection
Setup for pion inverse electroproduction on protons and nuclei, 8:30289 (R:SU:In Russian)
Spatial Resolution
Concept of a solid-state drift chamber, 8:30274 (R:US)
DRILL BITS
Performance Testing
Polycrystalline-diamond drill bits for Venezuelan oil-field application, 8:28993 (R:US)
DRILL CORES
Compacting
Physical processes of subsidence in geothermal reservoirs, 8:29445 (R:US)
Geochemistry
Multielement geochemistry of three geothermal wells, Cove Fort-Sulphurdale geothermal area, Utah, 8:29434 (R:US)

ELECTROCHEMICAL ENGINES
Introduction to the types of thermally regenerative electrochemical systems, 8:29791 (RA:US)
System of supportive coupled electrochemical cells operating in closed-loop for the conversion of heat into electrical energy, 8:29799 (RA:US)
Meetings
Thermally regenerative electrochemical systems workshop. Proceedings, 8:29790 (R:US)
Operation
Cu(I)/acetonitrile electrochemical heat engine, 8:29793 (RA:US)
Performance
Ideal electrochemical heat engines compared with those using Li/sub (l)//LiI-KI-CsI-CsBr/sub (melt)//I_2/sub (g, soln)/, 8:29797 (RA:US)
ELECTROCHEMISTRY
Computerized Simulation
Optimization of explicit finite-difference simulation of electrochemical phenomena utilizing an exponentially expanded space grid: refinement of the Joslin-Pletcher algorithm, 8:30064 (J:NL)
Research Programs
Electric field studies of the aggregation of electrolytes in low dielectric media. Final report, 8:30062 (R:US)
ELECTRODES
See also ANODES
CATHODES
Electron Emission
Influence of gap length on the field increase factor β, 8:30639 (R:US)
ELECTROLYTES
See also SOLID ELECTROLYTES
Dielectric Properties
Electric field studies of the aggregation of electrolytes in low dielectric media. Final report, 8:30062 (R:US)
ELECTROMAGNETIC FIELDS
Angular Momentum
Angular momentum paradoxes with solenoids and monopoles, 8:30721 (J:NL)
Biological Effects
Potassium ion influx measurements on cultured Chinese hamster cells exposed to 60-hertz fields, 8:30582 (RA:US)
ELECTROMAGNETIC PUMPS
Performance
Electromagnetic pumping of liquid lithium in inertial confinement fusion reactors, 8:30928 (R:US)
ELECTROMAGNETIC TRANSITIONS
See ENERGY-LEVEL TRANSITIONS
ELECTRON ACCEPTOR
See BINDING ENERGY
ELECTRONS
ELECTRON BEAM TARGETS
Implosions
Compression of the thermonuclear fuel targets by charged particle beams. Part 2, 8:30904 (R:SU:In Russian)
ELECTRON BEAMS
Annealing
High power linear pulsed beam annealer, 8:30646 (P:US)
Beam Analyzers
Beam-dump/diagnostics box for a 10-kA 50-MeV, 50-ns electron beam, 8:30196 (R:US)
Kilo Amp Beam Currents
Beam-dump/diagnostics box for a 10-kA 50-MeV, 50-ns electron beam, 8:30196 (R:US)
Production
High power linear pulsed beam annealer, 8:30646 (P:US)
ELECTRON CORRELATION
In atomic models.
Wave Functions
Hyperspherical coordinate theory of two electron atomic processes. Progress report, 1 August 1982-31 July 1983, 8:30637 (R:US)
ELECTRON CYCLOTRON MASERS
See MICROWAVE AMPLIFIERS
ELECTRON CYCLOTRON-RESONANCE HEATING
See ECR HEATING

ELECTRON DONOR
See BINDING ENERGY
ELECTRONS
ELECTRON EXCHANGE
Nuclear, electronic, and frequency factors in electron-transfer reactions, 8:30014 (J:US)
ELECTRON GUNS
Cathodes
High power linear pulsed beam annealer, 8:30646 (P:US)
Kilo Amp Beam Currents
PHERMEX electron gun development, 8:30238 (R:US)
Performance
PHERMEX electron gun development, 8:30238 (R:US)
ELECTRON MICROSCOPY
Energy Losses
Background fitting for electron energy loss spectra, 8:29997 (BA:US)
ELECTRON MULTIPLIER DETECTORS
Photocathodes
Development of photocathodes for gas counters, 8:30275 (R:FR:In French)
ELECTRON RINGS
Equilibrium
Field-reversed configurations with a component of energetic particles, 8:30945 (J:AT)
ELECTRON SOURCES
Electrodes
Influence of gap length on the field increase factor β, 8:30639 (R:US)
ELECTRONIC DATA PROCESSING
See DATA PROCESSING
ELECTRONIC EQUIPMENT
See also MICROWAVE EQUIPMENT
MULTIPLEXERS
POWER SUPPLIES
Research Programs
HMI scientific report 1981, 8:30993 (R:DE:In German)
ELECTRON-MOLECULE COLLISIONS
Angular Distribution
Angular distribution of electrons inelastically scattered from HgBra2 between 4 and 14 eV, 8:30625 (RA:US)
Energy Losses
Electron energy loss spectra in hydrogen chloride, 8:30626 (RA:US)
Electron energy loss spectroscopy in molecular chlorine, 8:30627 (RA:US)
ELECTRON-POSITRON INTERACTIONS
Annihilation
Investigation on the jet structure of hadronic events with a high energy photon, 8:30673 (R:DE:In German)
Jets at PETRA, 8:30674 (R:DE)
Measurement of α/sub s/ (Strong fine structure constant), 8:30679 (R:US)
Jets
Jets at PETRA, 8:30674 (R:DE)
Quantum Chromodynamics
QCD jets in e^+e^--annihilation and the transition into hadrons, 8:30694 (R:DD)
ELECTRON-PROTON INTERACTIONS
Colliding Beams
Beam-strahlung effects in e-p collider, 8:30173 (R:US)
ELECTRON-RING ACCELERATORS
Magnetic Compression
Intense ion ring acceleration in a flux-compressing liner, 8:30193 (R:US)
Magnetohydrodynamics
Self-trapping electron-ring accelerators, 8:30194 (R:US)
ELECTRONS
Energy Losses
Straggling and plasmon excitation in the energy loss spectra of electrons transmitted through carbon, 8:30801 (J:CH)
Inelastic Scattering
Inelastic cross sections for electron interactions in liquid water, 8:30788 (R:US)
Particle Models
Spin, masses and anomalous magnetic moments of charged leptons (the ring model), 8:30693 (R:SU:In Russian)
Particle Tracks
Analytic development of the track structure of electrons in water, 8:30073 (RA:US)
ELECTROSLAG WELDING
Welding Fluxes
AR and TD Fossil Energy Materials Program. Quarterly progress report for the period ending December 31, 1982, 8:28814 (R:US)
ELECTROSTATIC LENSES
Beam Optics
Use of axially symmetric electrostatic fields for ion-beam focussing, 8:30180 (R:US)
Electric Fields
Use of axially symmetric electrostatic fields for ion-beam focussing, 8:30180 (R:US)
Performance
Space charge limits in ESQ transport systems, 8:30178 (R:US)
ELECTROSTATIC PRECIPITATORS
Installation
Test and evaluation of hot gas cleanup devices. Phase I and II. Task I. Technical progress report, October 1, 1982-December 31, 1982, 8:28865 (R:US)
Performance Testing
Test and evaluation of hot gas cleanup devices. Phase I and II. Task I. Technical progress report, October 1, 1982-December 31, 1982, 8:28865 (R:US)
ELEMENT 104
Spontaneous Fission
Rapid disappearance of shell effects in the fission of transfermium nuclei, 8:30776 (R:US)
ELEMENTARY PARTICLES
See also HADRONS
LEPTONS
General Relativity Theory
Incompatibility of the quantum and relativity theories and a possible resolution, 8:30699 (J:US)
Quantum Mechanics
Incompatibility of the quantum and relativity theories and a possible resolution, 8:30699 (J:US)
ELMO BUMPY TORUS
ICR Heating
Heating experiments in the ion cyclotron range of frequencies on EBT-S, 8:30869 (J:AT)
EMBRYOS
Dehydration
Effects of dewatering on chinook salmon redds: tolerance of four developmental phases to daily dewaterings, 8:30556 (J:US)
EMERGENCY CORE COOLING SYSTEM
See ECCS
EMERGENCY PREPAREDNESS ACT
Implementation
Status of the Administration's implementation of the Energy Emergency Preparedness Act of 1982, 8:29053 (R:US)
Reporting Requirements
Status of the Administration's implementation of the Energy Emergency Preparedness Act of 1982, 8:29053 (R:US)
EMISSION SPECTROSCOPY
See also FLUORESCENCE SPECTROSCOPY
Application of the inductively coupled plasma in support of the waste management program at Hanford, 8:29988 (R:US)
EMITTANCE (BEAM)
See BEAM EMITTANCE
EMPHYSEMA
Biological Models
Early effects of intratracheal instillation of elastase on mortality, respiratory function, and pulmonary morphometry of F-344 rats, 8:30459 (J:US)
EMPLOYEES
See PERSONNEL
EMPLOYMENT
Ethics
Investigation of allegations made in a fourteen-page document, 8:29730 (R:US)

EMS
Genetic Effects
Sister chromatid exchange, DNA repair, and single-gene mutation, 8:30564 (J:US)
EMULSIONS
See also MICROEMULSIONS
Rheology
Novel slurry transport medium, 8:28963 (BA:US)
END USE SECTOR
See INDUSTRY
RESIDENTIAL SECTOR
TRANSPORTATION SECTOR
ENERGY
See also BINDING ENERGY
GEOTHERMAL ENERGY
Information Dissemination
1982 annual report to Congress, 8:29769 (R:US)
EIA Publications: New Releases No. 61, January-February 1983, 8:29726 (R:US)
Market
Network formulation of the Midterm Energy Market Model (MEMM). Technical report SOL 80-5, 8:29736 (R:US)
ENERGY ABSORPTION
Mathematical Models
Dosimetric concepts for inhaled radon decay products in the human lung, 8:30500 (RA:US)
Microdosimetry
Biophysical aspects of radiation carcinogenesis, 8:30527 (BA:US)
ENERGY CONSERVATION
Energy future Santa Cruz. A citizens' plan for energy self-reliance, 8:29800 (R:US)
Appropriate Technology
New concepts reduce process energy, 8:29831 (J:US)
Federal Assistance Programs
Information and training program for state and regional SLAP organizations. Final report, February 1, 1981-January 31, 1983, 8:29768 (R:US)
Information Dissemination
Information and training program for state and regional SLAP organizations. Final report, February 1, 1981-January 31, 1983, 8:29768 (R:US)
Investment
Optimal timing of investments for industrial energy conservation, 8:29820 (R:US)
ENERGY CONSUMPTION
1982 annual report to Congress, 8:29769 (R:US)
Modified aggregation program for the PILOT process integrated model. Technical report SOL 80-31, 8:29735 (R:US)
National energy potential according to PILOT, 8:29737 (R:US)
Socio-Economic Factors
Energy in the New Zealand household: the energy cost of living, 1974 to 1980, 8:29764 (R:NZ)
ENERGY DEMAND
1982 annual report to Congress, 8:29769 (R:US)
Model of interfuel and capital-fuel substitution by consumers. Technical report SOL 78-22, 8:29741 (R:US)
National energy potential according to PILOT, 8:29737 (R:US)
Econometrics
Coal from the nation: household demand for electricity. Staff report, 8:29747 (R:US)
Economic Elasticity
Consumers energy-services model. Technical report SOL 79-16, 8:29742 (R:US)
Long-run elasticity of energy demand. Technical report SOL 77-6, 8:29762 (R:US)
Energy Models
Convergence properties of a PIES-type algorithm for non-integrable functions. Technical report SOL 77-33, 8:29744 (R:US)
ENERGY DEPOSITION
See ENERGY ABSORPTION
ENERGY EXTENSION SERVICE
Federal Assistance Programs
Information and training program for state and regional SLAP organizations. Final report, February 1, 1981-January 31, 1983, 8:29768 (R:US)
Information Dissemination
Information and training program for state and regional SLAP organizations. Final report, February 1, 1981-January 31, 1983, 8:29768 (R:US)
ENERGY INFORMATION ADMINISTRATION
1982 annual report to Congress, 8:29769 (R:US)
ENERGY INTEGRATED INDUSTRIAL PARKS
See INDUSTRIAL PARKS
ENERGY MANAGEMENT SYSTEMS
Cost
EMCS cost estimating data. Final report May-Sep 82, 8:29761 (R:US)
ENERGY MODELS
See also PIES
National energy potential according to PILOT, 8:29737 (R:US)
Progress report on the PILOT energy modeling project. Technical report SOL 77-11, 8:29733 (R:US)
Welfare equilibrium model (WEM) of energy supply, energy demand, and economic growth. Technical report SOL 79-3, 8:29740 (R:US)
Econometrics
Stanford PILOT energy/economic model. Technical report SOL 77-19, 8:29746 (R:US)
Economic Elasticity
Detailed sectoral modeling in a dynamic, multisector, welfare-equilibrium framework. Technical report SOL 77-28, 8:29738 (R:US)
Survey of research on model aggregation and simplification. Technical report SOL 79-26, 8:29734 (R:US)
Linear Programming
Large-scale systems optimizations with application to energy. Technical report SOL 77-3, 8:29743 (R:US)
Optimization
Large-scale systems optimizations with application to energy. Technical report SOL 77-3, 8:29743 (R:US)
ENERGY POLICY
Plutonium issue: an analysis of policies deferring the introduction of plutonium-fueled reactors in the US. Technical report SOL 78-24, 8:29739 (R:US)
World uranium supply and demand: impact of Federal policies, 8:29119 (R:US)
Decision Making
1982 annual report to Congress, 8:29769 (R:US)
National energy potential according to PILOT, 8:29737 (R:US)
Energy Models
National energy potential according to PILOT, 8:29737 (R:US)
Information Dissemination
Information and training program for state and regional SLAP organizations. Final report, February 1, 1981-January 31, 1983, 8:29768 (R:US)
Planning
Status of the Administration's implementation of the Energy Emergency Preparedness Act of 1982, 8:29053 (R:US)
Risk Assessment
Incorporating oxidants in assessments of energy-related health effects, 8:29750 (R:US)
Training
Information and training program for state and regional SLAP organizations. Final report, February 1, 1981-January 31, 1983, 8:29768 (R:US)
ENERGY SOURCE DEVELOPMENT
Environmental Impacts
Activities of the Los Alamos National Environmental Research Park, FY 81, 8:29754 (RA:US)
Piceance Basin mule deer study, 8:28878 (RA:US)
ENERGY STORAGE

ENHANCED RECOVERY
See also THERMAL RECOVERY
Evaluation
Enhanced oil recovery from offshore Gulf of Mexico reservoirs, 8:29015 (J:US)
Field Tests
Contracts for field projects and supporting research on enhanced oil recovery and improved drilling technology. Progress review No. 32, quarter ending September 30, 1982, 8:28990 (R:US)
Meetings
Third joint SPE/DOE symposium on enhanced oil recovery, 8:28998 (B:US)
Research Programs
Contracts for field projects and supporting research on enhanced oil recovery and improved drilling technology. Progress review No. 32, quarter ending September 30, 1982, 8:28990 (R:US)
ENVIRONMENT
Pollution Abatement
Decision under several objectives. Technical report SOL 77-20, 8:29753 (R:US)
Quality Assurance
Contingency plan for the Lawrence Livermore National Laboratory, Site 300, hazardous waste operations, 8:30586 (R:US)
ENVIRONMENTAL EXPOSURE CHAMBERS
See EXPOSURE CHAMBERS
ENVIRONMENTAL POLICY
Meetings
Model energy audit procedure for the RCS program, 8:29751 (BA:US)
Risk Assessment
Incorporating oxidants in assessments of energy-related health effects, 8:29750 (R:US)
ENVIRONMENTAL TRANSPORT
See also RADIONUCLIDE MIGRATION
Mathematical Models
Development of a simplified model to predict runoff, sediment yield, and contaminant transport in Mortandad Canyon, 8:30390 (RA:US)
Recent developments in modeling variably saturated flow and transport, 8:30590 (RA:US)
Meetings
Symposium on unsaturated flow and transport modeling, 8:30589 (R:US)
ENZYME ACTIVITY
Biochemical Reaction Kinetics
Photosynthetic carbon metabolism in the submerged aquatic angiosperm Scirpus subterminalis, 8:30444 (J:NL)
ENZYMES
The enzyme code numbers from ENZYME NOMENCLATURE: RECOMMENDATIONS (1972) OF THE INTERNATIONAL UNION OF PURE AND APPLIED CHEMISTRY AND THE INTERNATIONAL UNION OF BIOCHEMISTRY is given in a Scope Note for the individual enzymes.

Research and Development Projects: geothermal power systems (Annotated list), 8:29426 (RA:US)
Technology Transfer
Decade of change: EPRI and the climate for research, 8:29775 (J:US)
EQUATIONS (DIFFERENTIAL)
See DIFFERENTIAL EQUATIONS
ERBIUM
Neutron Reactions
Fast-neutron capture-cross-section measurements with the Argonne National Laboratory large-liquid-scintillator tank, 8:30752 (RA:US)
EROSION
Mathematical Models
Overland erosion of uranium-mill-tailings impoundments: physical processes and computational methods, 8:29247 (R:US)

ERRORS
For the concept of mistakes; not for DATA COVARIANCES.
Global Analysis
Global error estimates for ODEs based on extrapolation methods, 8:31002 (R:US)
ERYTHROBLASTS
See BONE MARROW CELLS
ESCHERICHIA COLI
Labelling
Biochemical synthesis with stable isotopes, 8:30448 (RA:US)
ESTROGENS
Labelling
Aromatic fluorinations suitable for fluorine-18 labeling of estrogens, 8:30092 (J:US)
ETA MESONS
Particle Decay
Search for cumulative eta mesons in the πsup(-)Cu→eta(180deg)X reaction at 3.8 GeV/c, 8:30672 (R:SU:In Russian)
Particle Production
Search for cumulative eta mesons in the πsup(-)Cu→eta(180deg)X reaction at 3.8 GeV/c, 8:30672 (R:SU:In Russian)
ETA-549
See ETA MESONS
ETF (TOKAMAK)
See TOKAMAK ETF
ETHANE
Chemical Reaction Yield
Promoter modifications of catalytic activity and selectivity. Progress report, April 1, 1982-March 31, 1983, 8:29288 (R:US)
Thermodynamic Properties
Correlations for estimating critical constants, acentric factor, structure factor, and dipole moment for undefined fractions, 8:28831 (RA:US)
1,2-ETHANEDIOL
See GLYCOLS
ETHANOL
Chemical Properties
Ethanol/water, physical and chemical properties for separation-process design, 8:29289 (R:US)
Osmosis
Membrane research subtask, alcohol-fuels program. Annual progress report, FY 1982, 8:29290 (R:US)
Physical Properties
Ethanol/water, physical and chemical properties for separation-process design, 8:29289 (R:US)
Separation Processes
Ethanol/water, physical and chemical properties for separation-process design, 8:29289 (R:US)
Membrane research subtask, alcohol-fuels program. Annual progress report, FY 1982, 8:29290 (R:US)
Synthesis
A general homogeneous catalytic method for the homologation of methanol to ethanol, 8:29291 (J:US)
Thermal Conductivity
Thermal conductivity measurements and molecular association in a series of alcohol vapors: methanol, ethanol, isopropanol, and t-butanol (Temperature and pressure dependence), 8:29292 (J:US)
Thermodynamic Properties
Correlations for estimating critical constants, acentric factor, structure factor, and dipole moment for undefined fractions, 8:28831 (RA:US)
Thermodynamics
Thermal conductivity measurements and molecular association in a series of alcohol vapors: methanol, ethanol, isopropanol, and t-butanol (Temperature and pressure dependence), 8:29292 (J:US)
Vacuum Distillation
Vacuum ethanol distillation technology, 8:29317 (R:US)
ETHANOL PLANTS
Contracts
Contract arrangements for feedstock supply for energy farming. Final report, 8:29319 (R:NZ)
ETHERS
See also ANISOLE
Molecular Weight
Characterization of Cerro Negro crude. Part I. Physical and chemical separations (Project shared by Bartlesville Energy Technology Center, US DOE, and Institute de Tecnologico del Venezolana Petroleo), 8:29055 (J:US)
Structural Chemical Analysis
Characterization of Cerro Negro crude. Part I. Physical and chemical separations (Project shared by Bartlesville Energy Technology Center, US DOE, and Institute de Tecnologico del Venezolana Petroleo), 8:29055 (J:US)

GCFR TYPE REACTORS
LMFBR TYPE REACTORS
Fuel Cycle
Impact of core design on the fuel cycle of fast neutron reactors, 8:29578 (R:FR:In French)
Reactor Kinetics
Reactor theory and analysis. Final report, June 1, 1974-December 31, 1982, 8:29586 (R:US)
Reactor Physics
Fast-neutron capture in fissile and fertile nuclides, 8:30774 (RA:US)
Neutron capture data and FBR performance predictions, 8:29575 (RA:US)
Some summary reflections, 8:30758 (RA:US)
FECES
Radiochemical Analysis
Rare earth analysis in human biological samples by atomic absorption using electrothermal atomization, 8:30086 (RA:US)
FEDERAL GOVERNMENT
See NATIONAL GOVERNMENT
FEDERAL REGION I
Prior to June 1982 this concept was indexed to NORTH ATLANTIC REGION.
Geothermal Resources
Geothermal resource assessment of the New England states, 8:29435 (R:US)
Hydroelectric Power Plants
Study of the interrelationships between minimum flow release policies and hydroelectric power development in New England. Final report, 8:29294 (R:US)
FEDERAL REGION VI
Prior to June 1982 this concept was indexed to SOUTHWEST REGION.

Radioactive Waste Disposal
Environmental characterization report for the Gulf Interior Region Mississippi study area (Lampton, Richton, and Cypress Creek salt domes), 8:29251 (R:US)
FEDERAL REPUBLIC OF GERMANY
Encapsulation
Investigations of the treatment of alpha-contaminated wastes at the Karlsruhe Nuclear Research Center, 8:29191 (BA:US)
Energy Conservation
New Thermal Insulation Ordinance, 8:29813 (J:DE:In German)
Fly Ash
Properties of fly ash used in Germany, 8:28826 (RA:US)

Radioactive Waste Processing
High-level waste vitrification technique in a full-scale pilot plant, 8:29179 (BA:US)
Investigations of the treatment of alpha-contaminated wastes at the Karlsruhe Nuclear Research Center, 8:29191 (BA:US)
Treatment of TRU wastes: recent results of developments underway in Germany, 8:29202 (BA:US)
Research Programs
34th meeting of the International Committee for Coal Petrology, Pau, France: and aspects of carbonisation and petrographic research at selected centres in Europe, 8:28822 (R:AU)
Solidification
Investigations of the treatment of alpha-contaminated wastes at the Karlsruhe Nuclear Research Center, 8:29191 (BA:US)

FEED MATERIALS PLANTS
Environmental Impacts
Environmental impact of uranium mining and milling: an American view, 8:30362 (R:US)
Health Hazards
Chapter 2: uranium mines and mills, 8:29103 (R:US)
Radiation Hazards
Environmental impact of uranium mining and milling: an American view, 8:30362 (R:US)
Regulations
Chapter 2: uranium mines and mills, 8:29103 (R:US)

FEEDING
Biological Effects
Continued studies of the gastrointestinal absorption of plutonium by rodents: relationships to feeding regimen and age of animals, 8:30468 (RA:US)

FERMENTATION ALCOHOL
See ETHANOL

FERMILAB ACCELERATOR
Facility at Fermi National Accelerator Laboratory, Batavia, Illinois, includes main synchroton, booster synchrotron, and linac.
Antiproton Beams
120-GeV proton transport for antiproton production in the Fermilab Tevatron I project, 8:30182 (R:US)
Electromagnetic Lenses
Mechanical and electrical design of the Fermilab lithium lens and transformer system, 8:30183 (R:US)

FERROCENE
Chemical Preparation
Bridged ferrocenes. VII. Synthesis of di- and tri-bridged ferrocenes with pentamethylene chains, 8:30054 (J:NL)

FERROELECTRIC CONVERTERS
Operation
Condensed-state heat engines, 8:29798 (RA:US)

FERROMAGNETIC MATERIALS
Charged-Particle Transport
Theory of muon spin relaxation due to the hopping motion of positive muons in ferromagnets, 8:30794 (J:US)
Muon Probes
Theory of muon spin relaxation due to the hopping motion of positive muons in ferromagnets, 8:30794 (J:US)

FERTILE MATERIALS
Neutron Reactions
Fast-neutron capture in fissile and fertile nuclides, 8:30774 (RA:US)

FESHBACH-PORTER-WEISSKOPF MODEL
See OPTICAL MODELS

FIBERGLASS
Replication of architectural antiquities using polymeric materials, 8:29949 (R:US)

FIBROBLASTS
Biological Radiation Effects
p-Aminobenzoic acid-sunlamp sensitization of pyrimidine dimer formation and transformation in human cells, 8:30529 (J:GB)
The repair of potentially lethal and sublethal damage in unfed plateau-phase cultures irradiated at 0.78 Gy/hr (^{137}Cs), 8:30519 (J:US)
Hybridization
Molecular mechanism of extinction of liver-specific functions in mouse hepatoma x rat fibroblast hybrids: extinction of the albumin gene, 8:30438 (J:US)
Implants
Role of anchorage in the expression of tumorigenicity of untransformed mouse cell lines, 8:30431 (J:US)
Mutations
Quantitation of mutations induced by metabolically activated mutagens in normal human fibroblasts, 8:30544 (RA:US)
Oncogenic Transformations
Role of anchorage in the expression of tumorigenicity of untransformed mouse cell lines, 8:30431 (J:US)

FIBROSIS
Radioinduction
Dosimetry and response in rat pulmonary epithelium following inhalation of $^{239}PuO_2$, 8:30502 (RA:US)

FIRES
Land Reclamation
Natural regeneration of ponderosa pine as related to land use and fire history of the Pajarito Plateau, 8:30400 (RA:US)

FIRST WALL
Cleaning
Dependence of the tokamak chamber sputtering intensity on its cleaning technique, 8:30903 (R:SU:In Russian)
Radioactivity
Waste management of first wall and blanket structural materials for tokamak fusion reactors, 8:30890 (R:US)
Sputtering
Dependence of the tokamak chamber sputtering intensity on its cleaning technique, 8:30903 (R:SU:In Russian)

FISCHER-TROPSCH SYNTHESIS
Chemical Reaction Kinetics
Study of Fischer-Tropsch synthesis through the use of surface intermediate scavengers. Progress report, August 1, 1982-April 1, 1983, 8:29287 (R:US)
Research Programs
Study of Fischer-Tropsch synthesis through the use of surface intermediate scavengers. Progress report, August 1, 1982-April 1, 1983, 8:29287 (R:US)

FISHES
Population Dynamics
Genesis of bimodal size distributions in species cohorts (Largemouth bass), 8:30377 (J:US)
Structuring of a predator population through temperature-mediated effects on prey availability, 8:30396 (J:CA)

FISSILE MATERIALS
Breeding
Fissile fuel breeding in DT fusion reactor blankets, 8:30884 (R:CA)
Neutron Reactions
Fast-neutron capture in fissile and fertile nuclides, 8:30774 (RA:US)

Neutron spectroscopy. Final report, 8:30775 (R:US)

FISSION

Liquid Drop Model

Classifying the singularity in the deformation shape of the liquid-drop model, 8:30782 (J:IT)

FISSION CHAMBERS

Performance Testing

Evaluation of Toshiba Type HS-2 fission chamber (HTGR), 8:29572 (R:US)

FISSION PRODUCT RELEASE

Coordinate with descriptors for the area of release such as BIOSPHERE or COOLANTS, and for the specific fission products, if known.

Aerosol release and transport program. Quarterly progress report, October-December 1982 (Oak Ridge National Laboratory; PWR; BWR; LMFBR), 8:29688 (R:US)

FISSION PRODUCTS

Neutron Reactions

Differential fission product capture cross section measurements since Bologna, 8:30754 (RA:US)

Fast-neutron capture cross sections for the most important fission-product nuclei, 8:30757 (RA:US)

Status of recent fast capture cross section evaluations for important fission product nuclides, 8:30756 (RA:US)

Separation Processes

Investigations of the treatment of alpha-contaminated wastes at the Karlsruhe Nuclear Research Center, 8:29191 (BA:US)

FISSIONABLE MATERIALS MANAGEMENT

FLUORINE IONS
Electronic Structure
Comparisons between theory and experiment in two electron systems, 8:30650 (J:NL)

FLUTE INSTABILITY
Kinetic and resistive effects on interchange instabilities for a cylindrical model spheromak, 8:30863 (R:US)

FLY ASH
Chemical Analysis
Distinction in physical and chemical characteristics between lignitic and bituminous flyashes, 8:28825 (RA:US)
Physical and chemical behavior of selectively etched fly ashes, 8:28824 (RA:US)
Chemical Composition
Characterization of flyashes, 8:28823 (RA:US)
International aspects of development of the uses of fly ash with cement (Denmark, India, France, Great Britain, Canada, Japan, South Africa, Australia, USA, China, Poland), 8:28857 (RA:US)
Production and collection of fly ash for use in concrete, 8:28838 (RA:US)
Properties of fly ash used in Germany, 8:28826 (RA:US)
Chemical Properties
Distinction in physical and chemical characteristics between lignitic and bituminous flyashes, 8:28825 (RA:US)
Effects of flyash incorporation in cement and concrete, 8:28837 (R:US)
Chemical Reactions
Characterization of flyashes, 8:28823 (RA:US)
Hydration reactions in flyash-Portland cements, 8:28844 (RA:US)
International aspects of development of the uses of fly ash with cement (Denmark, India, France, Great Britain, Canada, Japan, South Africa, Australia, USA, China, Poland), 8:28857 (RA:US)
Grinding
Effects of grinding on properties of fly ash cements, 8:28860 (RA:US)
Hydration
Combined lime and specific surface area of the hydration products of lime-pozzolana and lime-fly ash mixes, 8:28848 (RA:US)
Hydration of tricalcium silicate in the presence of fly ash, 8:28840 (RA:US)
Hydration mechanisms of high-lime fly ash in Portland-cement composites, 8:28843 (RA:US)
Hydration reactions in flyash-Portland cements, 8:28844 (RA:US)
Influence of pulverised fuel ash on the hydration reactions of calcium aluminates, 8:28841 (RA:US)
International aspects of development of the uses of fly ash with cement (Denmark, India, France, Great Britain, Canada, Japan, South Africa, Australia, USA, China, Poland), 8:28857 (RA:US)
Pastes of tricalcium silicate with fly ash - analytical electron microscopy, trimethylsilyation and other studies, 8:28839 (RA:US)
Pore structure formation during hydration of fly-ash and slag cement blends, 8:28846 (RA:US)
Studies of the hydration reactions and microstructure of cement-flyash pastes, 8:28842 (RA:US)
Leaching
Comparison of three solid waste batch leach testing methods and a column leach test method, 8:28871 (J:US)
Physical and chemical behavior of selectively etched fly ashes, 8:28824 (RA:US)

Materials Handling
Production and collection of fly ash for use in concrete, 8:28838 (RA:US)
Materials Recovery
Determination of extraction equilibria for several metals in the development of a process designed to recover aluminum and other metals from coal combustion ash, 8:28821 (J:NL)
Meetings
Effects of flyash incorporation in cement and concrete, 8:28837 (R:US)
Microstructure
Hydration mechanisms of high-lime fly ash in Portland-cement composites, 8:28843 (RA:US)
Studies of the hydration reactions and microstructure of cement-flyash pastes, 8:28842 (RA:US)
Morphology
Characterization of flyashes, 8:28823 (RA:US)
Particle Size
Flyash in cement pastes - some effects of particle size and distribution, 8:28852 (RA:US)
Particle Size Classifiers
High-temperature-high-pressure cascade impactor design, performance, and data analysis methods, 8:30338 (J:US)
Physical Properties
Distinction in physical and chemical characteristics between lignitic and bituminous flyashes, 8:28825 (RA:US)
Effects of flyash incorporation in cement and concrete, 8:28837 (R:US)
Production and collection of fly ash for use in concrete, 8:28838 (RA:US)
Properties of fly ash used in Germany, 8:28826 (RA:US)
Porosity
Effects of grinding on properties of fly ash cements, 8:28860 (RA:US)
Production
Characterization of flyashes, 8:28823 (RA:US)
Storage
Production and collection of fly ash for use in concrete, 8:28838 (RA:US)
Toxicity
Report to the IEA AFBC technical meeting at Petten, Netherlands, May 1982: TNO's environmental program on fluidized bed combustion, 8:28868 (R:NL)
Waste Product Utilization
American and foreign characterization of fly ash for use in concrete (USA, Canada, India, Japan), 8:28859 (RA:US)
Comparative studies of the effects of lignitic and bituminous flyashes in hydrated cement systems, 8:28845 (RA:US)
Distinction between water reduction and reactivity as the factors influencing flyash performance in concrete, 8:28861 (RA:US)
Effect of fly ash on the setting time of concrete - chemical or physical, 8:28849 (RA:US)
Effects of flyash incorporation in cement and concrete, 8:28837 (R:US)
Effects of various types of fly ash on behavior and properties of concrete, 8:28858 (RA:US)
Effects of grinding on properties of fly ash cements, 8:28860 (RA:US)
Fly ash concrete under hot weather conditions, 8:28850 (RA:US)
Flyash in cement pastes - some effects of particle size and distribution, 8:28852 (RA:US)
International aspects of development of the uses of fly ash with cement (Denmark, India, France, Great Britain, Canada, Japan, South Africa, Australia, USA, China, Poland), 8:28857 (RA:US)

Coal-fired power-plant cost estimates, 8:29492 (R:US)
Operation
Modular Modeling System (MMS): a code for the dynamic simulation of fossil and nuclear power plants: overview and general theory. Final report, 8:29499 (R:US)
Solid Wastes
Unsaturated flow modeling as applied to field problems, 8:30591 (RA:US)
Thermal Effluents
Before-and-after studies on the effects of a power-plant installation on Lake Lyndon B. Johnson. Before studies, Volume III. Temperature modeling. Final report to the Lower Colorado River Authority, 8:30393 (R:US)
Before-and-after studies on the effects of a power-plant installation on Lake Lyndon B. Johnson: thermal and hydrodynamic behavior of a low-Froude-number power-plant discharge - analytical modeling and field verification. Interim Report No. 7, 8:30394 (R:US)
FRACTURED FORMATIONS
See FRACTURED RESERVOIRS
FRACTURED RESERVOIRS
Fluid Flow
Unsaturated flow and transport through fractured rock - related to high-level waste repositories. Final report. Phase I, 8:29157 (R:US)
FRACTURES
Measuring Methods
Method to identify zones of intense jointing with application to the Parsons Lineament, West Virginia, 8:29059 (R:US)
FRACTURING
Measuring Methods
Techniques and tests for measuring joint intensity, 8:30587 (R:US)
FRACTURING FLUIDS
Optimization
Elimination of xanthan microgels by new enzymatic treatments, 8:29027 (J:US)
FRANCE
District Heating
Use of coal for urban district heating, 8:29853 (R:XU)
Radioactive Waste Disposal
12 years of experience of shallow land disposal of low and intermediate level radioactive waste in France, 8:29144 (RA:US)
Radioactive Waste Management
Low level and intermediate level wastes management practice in France, 8:29184 (BA:US)
Reactor Safety
Significance of the human factor in the safety of nuclear reactors: the French experience and the lessons of Three Mile Island., 8:29625 (R:AU)
Waste Product Utilization
International aspects of development of the uses of fly ash with cement (Denmark, India, France, Great Britain, Canada, Japan, South Africa, Australia, USA, China, Poland), 8:28857 (RA:US)
FREE ELECTRON LASERS
Accelerator Facilities
Free electron laser experiment at Brookhaven, 8:30252 (R:US)
Beam Bunchers
Subharmonic triple buncher for a high-efficiency free-electron laser, 8:30117 (R:US)
Efficiency
High-efficiency free-electron laser results, 8:30118 (R:US)
Optimization
Two-dimensional optimization of free-electron-laser designs, 8:30122 (P:US)
Oscillators
Subharmonic triple buncher for a high-efficiency free-electron laser, 8:30117 (R:US)
RF Systems
rf system for the Los Alamos free-electron laser (FEL), 8:30230 (R:US)
FREE RADICALS
See RADICALS
FREQUENCY CONVERTERS
Design
Optical harmonic generator, 8:30120 (P:US)
FRUIT (SEEDS)
See SEEDS
FUEL ASSEMBLIES
See also FUEL ELEMENT CLUSTERS
Burnup
Evaluation and demonstration of methods for improved nuclear-fuel utilization. Fifth semi-annual progress report, January 1-June 30, 1982 (PWR; Combustion Engineering Inc.), 8:29599 (R:US)
Qualification of the B and W Mark B fuel assembly for high burnup. Eighth semi-annual progress report, January-June 1982, 8:29557 (R:US)
Flow Blockage
Review of recent ANL safety experiments in SLSF and TREAT (LMFBR), 8:29631 (R:US)

Fuel Element Failure
LOCA simulation in the National Research Universal reactor program: data report for the third materials experiment (MT-3) (PWR), 8:29685 (R:US)
Performance Testing
Qualification of the B and W Mark B fuel assembly for high burnup. Eighth semi-annual progress report, January-June 1982, 8:29557 (R:US)
Thermal Stresses
LOCA simulation in the National Research Universal reactor program: data report for the third materials experiment (MT-3) (PWR), 8:29685 (R:US)
Two-Phase Flow
Local void and slip model used in BODYFIT-2PE, 8:29538 (R:US)

FUEL BUNDLES
See FUEL ELEMENT CLUSTERS

FUEL CANS
Cracks
Chemical aspects of Iodine-induced stress corrosion cracking of Zircaloys, 8:29900 (J:US)
Creep
Effects of temperature and pressure on the in-reactor creepdown of Zircaloy fuel cladding, 8:29567 (J:US)
Embrittlement
Effect of hydrogen on the oxygen embrittlement of beta-quenched Zircaloy-4 fuel cladding, 8:29698 (J:US)
Flow Blockage
Multi-rod burst test under a loss-of-coolant accident condition, (2). Experimental result of the bundle No.7806, 8:29675 (R:JP:In Japanese)
Laser Drilling
Use of lasers at the Los Alamos Hot-Cell Facility, 8:30103 (R:US)
Laser Welding
Use of lasers at the Los Alamos Hot-Cell Facility, 8:30103 (R:US)
Oxidation
Comparison of the high-temperature oxidation behavior of Zircaloy-4 and pure zirconium, 8:29568 (J:US)
Physical Radiation Effects
Effect of hydrogen on the oxygen embrittlement of beta-quenched Zircaloy-4 fuel cladding, 8:29698 (J:US)
Effects of temperature and pressure on the in-reactor creepdown of Zircaloy fuel cladding, 8:29567 (J:US)
Strains
LOCA simulation in the National Research Universal reactor program: data report for the third materials experiment (MT-3) (PWR), 8:29685 (R:US)
Stress Corrosion
Chemical aspects of Iodine-induced stress corrosion cracking of Zircaloys, 8:29900 (J:US)
Swelling
LOCA simulation in the National Research Universal reactor program: data report for the third materials experiment (MT-3) (PWR), 8:29685 (R:US)
Multi-rod burst test under a loss-of-coolant accident condition, (2). Experimental result of the bundle No.7806, 8:29675 (R:JP:In Japanese)
Tubes
Chemical aspects of Iodine-induced stress corrosion cracking of Zircaloys, 8:29900 (J:US)

FUEL CELLS
See also HIGH-TEMPERATURE FUEL CELLS
Catalysts
Metal chelate catalysts for fuel cells. Final report June 1979 - October 1982, 8:29788 (R:US)
Economic Analysis
Fuel cells for electric utility and transportation applications, 8:29794 (J:US)
Materials
AR and TD Fossil Energy Materials Program. Quarterly progress report for the period ending December 31, 1982, 8:28814 (R:US)
Technology Assessment
Fuel cells for electric utility and transportation applications, 8:29794 (J:US)

FUEL COOLING INSTALLATIONS
See SPENT FUEL STORAGE

FUEL CYCLE
Evaluation and demonstration of methods for improved nuclear-fuel utilization. Fifth semi-annual progress report, January 1-June 30, 1982 (PWR; Combustion Engineering Inc.), 8:29599 (R:US)
Reactors and fuel production, 8:29537 (R:US)

FUEL ELEMENT CLUSTERS
Transport
Experience with fuel damage from abnormal conditions in handling and transport, 8:29117 (R:US)

FUEL ELEMENT FAILURE
Effect of hydrogen on the oxygen embrittlement of beta-quenched Zircaloy-4 fuel cladding, 8:29698 (J:US)
Estimation of fuel temperature increase during coolant boiloff accident, 8:29677 (R:JP:In Japanese)
Test Facilities
LOCA simulation in the National Research Universal reactor program: data report for the third materials experiment (MT-3) (PWR), 8:29685 (R:US)

FUEL GAS
See also HIGH BTU GAS
INTERMEDIATE BTU GAS
LOW BTU GAS
NATURAL GAS
Desulfurization
Calcium silicate cement sorbent for H_2S removal and improved gasification processes. Annual progress report, October 1, 1981-September 30, 1982, 8:28791 (R:US)
Purification
BI-GAS coal-gasification program. Final report, November 1979-August 1982, 8:28798 (R:US)
CNG acid-gas-removal process. Technical progress report No. 6, 1 February 1982-30 April 1982, 8:28802 (R:US)
Design and development of a high-velocity wedge separator for particle removal in coal-gasification plants. Quarterly report, October 1-December 31, 1982 and technical progress and Phase IV report, 8:28800 (R:US)
Water Removal
CNG acid-gas-removal process. Technical progress report No. 6, 1 February 1982-30 April 1982, 8:28802 (R:US)

FUEL KERNELS
See FUEL PARTICLES

FUEL MANAGEMENT
Evaluation and demonstration of methods for improved nuclear-fuel utilization. Fifth semi-annual progress report, January 1-June 30, 1982 (PWR; Combustion Engineering Inc.), 8:29599 (R:US)

FUEL OILS
See also RESIDUAL FUELS
Prices
Cost and quality of fuels for electric utility plants (December 1982), 8:29496 (R:US)

FUEL PARTICLES
Production
Method of dispensing droplets to penetration-resistive mediums (Patent application), 8:29108 (P:US)

FUEL PELLETS
Evaporation
New algorithm for computing the ablation of hydrogenic pellets in hot plasmas, 8:30922 (R:US)
Fabrication
Technique for controlling shrinkage distortion in cold-pressed annular pellets (Patent), 8:29616 (P:US)

FUEL PLATES
Fabrication
French LEU fuel for research reactor with emphasis on the Osiris experience of core conversion and reactor operation with the new fuel, 8:29622 (R:FR)

FUEL POOLS
Spent Fuel Elements
Portable instrument for inspecting irradiated nuclear-fuel assemblies in a water-filled storage pond by measurement of induced Cerenkov radiation (Patent), 8:30299 (P:US)

FUEL REPROCESSING
See REPROCESSING

FUEL RODS
Burnup
Fuel-Performance-Improvement Program. Semiannual progress report, April-September 1982 (PWR; BWR), 8:29540 (R:US)
Fabrication
"Fabrice" process for reconstituting experimental rods in a hot cell from pre-irradiated rods in power reactors, 8:29615 (R:FR:In French)
Performance
Licensing applications and requirements of an ideal steady-state fuel-performance code. Final report (PWR;BWR), 8:29545 (R:US)
SPEAR-BETA fuel-performance code system. Volume 2 (revision 1). Part 1. Programmer's manuals. Part 2. User's manual (PWR; BWR), 8:29555 (R:US)
SPEAR-FCODE-GAMMA functional specifications. Final report (PWR; BWR), 8:29546 (R:US)
Performance Testing
Fuel-Performance-Improvement Program. Semiannual progress report, April-September 1982 (PWR; BWR), 8:29540 (R:US)
Reliability
SPEAR-BETA fuel-performance code system. Volume 2 (revision 1). Part 1. Programmer's manuals. Part 2. User's manual (PWR; BWR), 8:29555 (R:US)
Simulation
Comparison of thermal behavior of different PWR fuel rod simulators for LOCA experiments, 8:29678 (R:DE)
FUEL SHEATHS
See FUEL CANS
FUEL SLUGS
See FUEL RODS
FUEL SLURRIES
Combustion
Basic combustion and pollutant-formation processes for pulverized fuels. Quarterly technical progress report No. 10, 1 January 1983-31 March 1983, 8:28968 (R:US)
Commercialization
Methacoal fuels, or coal-alcohol slurry fuels, an entree for methanol to world markets (Patented; information and license available from the Keller Corp., Dallas, TX), 8:28977 (RA:US)
Density
Rheology of coal slurries at process temperatures and pressures, 8:28827 (R:US)
Economics
Methacoal fuels, or coal-alcohol slurry fuels, an entree for methanol to world markets (Patented; information and license available from the Keller Corp., Dallas, TX), 8:28977 (RA:US)
Market
Methacoal fuels, or coal-alcohol slurry fuels, an entree for methanol to world markets (Patented; information and license available from the Keller Corp., Dallas, TX), 8:28977 (RA:US)
Pumping
Testing of high temperature coal slurry pump packings, 8:28813 (R:US)
Rheology
Methacoal fuels, or coal-alcohol slurry fuels, an entree for methanol to world markets (Patented; information and license available from the Keller Corp., Dallas, TX), 8:28977 (RA:US)
Rheology of coal slurries at process temperatures and pressures, 8:28827 (R:US)
Thixotropy
Methacoal fuels, or coal-alcohol slurry fuels, an entree for methanol to world markets (Patented; information and license available from the Keller Corp., Dallas, TX), 8:28977 (RA:US)
FUEL SUBSTITUTION
Environmental Impacts
Powerplant and Industrial Fuel Use Act. Annual report, 8:29771 (R:US)
Feasibility Studies

Corrosion reference for geothermal downhole materials selection, 8:29464 (R:US)
Well Casings
Euler buckling of geothermal well casing, 8:29468 (R:US)
Well Completion
Geothermal progress monitor. Progress report No. 7, 8:29432 (R:US)

GERMAN FEDERAL REPUBLIC
See FEDERAL REPUBLIC OF GERMANY

GERMAN FR ORGANIZATIONS
Research Programs
HMI scientific report 1981, 8:30993 (R:DE:In German)

GERMANIUM
Atom Collisions
Long range interaction between a He atom and a semiconductor surface, 8:30658 (J:NL)
Charged-Particle Transport
Muonium in ultra-pure germanium, 8:30792 (J:US)
Magnetic Resonance
Muonium in ultra-pure germanium, 8:30792 (J:US)
Muon Probes
Temperature dependence of the hyperfine parameters of anomalous muonium in germanium, 8:29960 (J:US)
Muonium
Screening of impurities in semiconductors: muonium in germanium, silicon and diamond, 8:29962 (J:US)
Temperature dependence of the hyperfine parameters of anomalous muonium in germanium, 8:29960 (J:US)
Point Defects
Physics of ultra-pure germanium, 8:29920 (J:GB)
Rayleigh Waves
Application of metal single crystal wedges to high frequency Rayleigh wave propagation, 8:30138 (J:US)
X-Ray Diffraction
Reflection intensities of photons in the n-th diffraction order for crystal planes of quartz. LiF, Ge and Si, 8:29931 (R:SU:In Russian)

GERMANIUM TELLURIDES
Atom Transport
Study of gold diffusion in thin-film glass semiconductor $GeTe_4$ by nuclear methods, 8:29956 (R:FR:In French)

GERMANY (FEDERAL REPUBLIC)
See FEDERAL REPUBLIC OF GERMANY

GIANT CELLS
See TUMOR CELLS

GIANT RESONANCE
Decay
Average radiation widths and the giant dipole resonance width, 8:30781 (R:DE)
Level Widths
Average radiation widths and the giant dipole resonance width, 8:30781 (R:DE)
Nuclear Models
Average radiation widths and the giant dipole resonance width, 8:30781 (R:DE)

GLASS
See also BOROSILICATE GLASS
Chemical Composition
Pastes of tricalcium silicate with fly ash - analytical electron microscopy, trimethylsilyation and other studies, 8:28839 (RA:US)
Crystallization
Attempt to assess the long-term crystallization rate of nuclear waste glasses, 8:29969 (BA:US)
Quantitative determination of crystalline phases in nuclear waste glasses, 8:29970 (BA:US)
Leaching
Effects of radiation damage and radiolysis on the leaching of vitrified waste, 8:29974 (BA:US)
Flow model for the kinetics of dissolution of nuclear waste forms; a comparison of borosilicate glass, SYNROC and high-silica glass, 8:29225 (BA:US)
Leaching of natural and synthetic sphene and perovskite, 8:29938 (BA:US)
SIMS depth profiling studies of sphene-based ceramics and glass ceramics leached in synthetic groundwater, 8:29937 (BA:US)
Stability and alteration of naturally occurring low-silica glasses: implications for the long term stability of waste form glasses, 8:29223 (BA:US)
Phase Studies
Quantitative determination of crystalline phases in nuclear waste glasses, 8:29970 (BA:US)
Physical Radiation Effects
Irradiation-induced precipitation in palladium-base alloys. Third annual progress report, May 1, 1980-January 31, 1981, 8:29889 (R:US)
Stability
Stability and alteration of naturally occurring low-silica glasses: implications for the long term stability of waste form glasses, 8:29223 (BA:US)
X-Ray Diffraction
Quantitative determination of crystalline phases in nuclear waste glasses, 8:29970 (BA:US)

GLASS MELTERS
See CERAMIC MELTERS
GLOBAL ANALYSIS
Studies mathematical manifolds with topology which is locally Euclidean but globally non-Euclidean.
Interaction between conservative and gradient-like systems, 8:30834 (J:US)
GLOVEBOXES
Cutting
Sectioning techniques for plutonium-contaminated glove boxes, 8:29174 (BA:US)
Decontamination
Sectioning techniques for plutonium-contaminated glove boxes, 8:29174 (BA:US)
GLUCOSE
Biological Effects
The role of glucose in the growth of 9L multicell tumor spheroids, 8:30430 (J:US)
Labelling
Biochemical synthesis with stable isotopes, 8:30448 (RA:US)
Metabolism
The glucose distribution in 9L rat brain multicell tumor spheroids and its effect on cell necrosis, 8:30441 (J:US)
GLYCOLS
See also POLYETHYLENE GLYCOLS
Radiolysis
One-electron redox potentials of phenols. Hydroxy- and aminophenols and related compounds of biological interest, 8:30081 (J:US)
GOLD
Diffusion
Study of gold diffusion in thin-film glass semiconductor $GeTe_4$ by nuclear methods, 8:29956 (R:FR:In French)
Ion Collisions
Comparison of scattering of low energy K^+ and Ar^+ from the Au(110) surface, 8:30657 (J:NL)
Microanalysis
Systems background in x-ray microanalysis, 8:29999 (BA:US)
Physical Radiation Effects
Energy spectra of heavy fragments from the interaction of protons with communications materials, 8:30800 (J:US)
GOLD 197 TARGET
Neutron Reactions
Fast neutron capture in actinide isotopes: recent results from Karlsruhe, 8:30771 (RA:US)
Gamma-rays from radiative capture reactions in ^{133}Cs, ^{181}Ta and ^{197}Au, 8:30753 (RA:US)
Gold standard capture cross section from 100 keV to 15 MeV, 8:30764 (RA:US)
GOLD IONS
Ultraviolet Spectra
Search for promethium-like gold lines and other transitions of interest to fusion research, 8:30648 (J:NL)
GOLGI APPARATUS
See ORGANOIDS
GRABS
Design
Grapple assembly, 8:30109 (P:US)
GRAIN ALCOHOL
See ETHANOL
GRAIN ORIENTATION
Measuring Methods
Optical-diffraction method for determining crystal orientation, 8:29334 (P:US)
GRAINS (CEREAL)
See SEEDS
GRAND GULF-1 REACTOR
Containment Systems
Review of the Grand Gulf Hydrogen Igniter System, 8:29686 (R:US)
Engineered Safety Systems
Review of the Grand Gulf Hydrogen Igniter System, 8:29686 (R:US)
Reactor Accidents
Review of the Grand Gulf Hydrogen Igniter System, 8:29686 (R:US)
GRAND GULF-2 REACTOR
Containment Systems
Review of the Grand Gulf Hydrogen Igniter System, 8:29686 (R:US)
Engineered Safety Systems
Review of the Grand Gulf Hydrogen Igniter System, 8:29686 (R:US)
Reactor Accidents
Review of the Grand Gulf Hydrogen Igniter System, 8:29686 (R:US)
GRANODIORITES
Waste-Rock Interactions
Interaction of borosilicate glass and granodiorite at 100°C, 50 MPa: implications for models of radionuclide release, 8:29232 (BA:US)
GRAPHITE
Recent developments in graphite (Use in HTGR and aerospace), 8:29953 (R:US)
Corrosion
Integrated compartment method application to the transient heat transfer in gas-cooled reactor, 8:29573 (R:US)
Tensile Properties
HTGR Plant Technology Program. Semiannual report for the period ending September 24, 1982, 8:29571 (R:US)
Thermal Stresses
Integrated compartment method application to the transient heat transfer in gas-cooled reactor, 8:29573 (R:US)
GRAPHITE MODERATOR
See GRAPHITE
GRATINGS
Design
Diffraction crystals for sagittally focusing x-rays, 8:30797 (P:US)
GRAVITATION
Field Equations
Loop equations in the theory of gravitation, 8:30817 (R:SU)
Field Theories
Some classical effects in static spherically symmetric gravitational field in field gravitational theory, 8:30816 (R:SU:In Russian)
GREAT BRITAIN
See UNITED KINGDOM
GREEN OIL
See SHALE OIL FRACTIONS
GREENHOUSE EFFECT
Environmental Impacts
Response of the North American corn belt to climatic warming, 8:30531 (R:US)
GRINDING
Contribution to the question of laboratory mills, 8:29927 (TJ:US)
GRINDING MACHINES
Monitoring
Maintenance of coal slurry dewatering equipment and the application of a Predix diagnostic system, 8:28965 (BA:US)
Performance Testing
ETSI Coal Evaluation Plant, 8:28920 (BA:US)
GROUND MOTION
Monitoring
Analysis of the stability of a highwall in an open cut strip coal mine, 8:28900 (B:AU)
GROUND WATER
Flow Models
Coupled heat and moisture transport in unsaturated soils, 8:30592 (RA:US)
Recent developments in modeling variably saturated flow and transport, 8:30590 (RA:US)
Symposium on unsaturated flow and transport modeling, 8:30589 (R:US)
Unsaturated flow modeling as applied to field problems, 8:30591 (RA:US)
Unsaturated flow and transport through fractured rock - related to high-level waste repositories. Final report. Phase I, 8:29157 (R:US)
Geochemical Surveys
Emanometric studies, 8:29101 (RA:US)

Isotope Dating
Status of geochemical problems relating to the burial of high-level radioactive waste, 1982, 8:29248 (R:US)
Radionuclide Migration
Influence of climatic parameters on movement of radionuclides in a multilayered saturated-unsaturated media, 8:30593 (RA:US)
Laboratory measurements of contaminant attenuation of uranium mill tailings leachates by sediments and clay liners, 8:29249 (R:US)
Programme of research into the management and storage of radioactive waste. Nuclide migration and mathematical modelling, 8:29121 (R:GB)
Programme of research into the management and storage of radioactive waste. Thermal phenomena in crystalline rock, 8:29122 (R:GB)
Recent developments in modeling variably saturated flow and transport, 8:30590 (RA:US)
Status of geochemical problems relating to the burial of high-level radioactive waste, 1982, 8:29248 (R:US)
GROUND-WATER RESERVES
See AQUIFERS
GUANIDINES
Phase Diagrams
Ammonium nitrate with 15 wt % potassium nitrate-ethylenediamine dinitrate-nitroguanidine system, 8:30028 (J:DE)
GUANIDYLAMINOVALERIC ACID
See ARGININE
GULF OF MEXICO
Oil Fields
Enhanced oil recovery from offshore Gulf of Mexico reservoirs, 8:29015 (J:US)
Water Currents
Circulation study of the Western Florida Shelf, 8:29405 (RA:US)
Some results from a three-dimensional Gulf of Mexico circulation model, 8:29404 (RA:US)
GUMS
Filtration
Separation of biopolymer from fermentation broths, 8:29336 (J:US)
GUNS
Erosion
Dusty gas influences on transport in turbulent erosive propellant flow, 8:30134 (J:US)
GYROTRONS
See MICROWAVE AMPLIFIERS

H

HADRON-HADRON INTERACTIONS
Diffraction Models
Dynamical model of the real part of the forward scattering amplitude, 8:30685 (R:SU)
Jet Model
Monte Carlo simulation of high p/sub T/ jets, 8:30666 (R:US)
Pair Production
Hadronic production of massive lepton pairs, 8:30678 (R:US)
Massive lepton pair production: what has QCD done to the classical Drell-Yan model, 8:30677 (R:US)
Quark Model
Dynamics of the coupled quark and hadronic channels, 8:30688 (R:SU)
Scattering Amplitudes
Dynamical model of the real part of the forward scattering amplitude, 8:30685 (R:SU)
Total Cross Sections
Differences in hadronic cross-sections and the residues of secondary reggeons in the quark-gluon model for strong interactions, 8:30687 (R:SU)
HADRONS
Electric Charges
Topological theory of electric charge, 8:30705 (J:NL)
Harmonic Oscillator Models
Foundations of the Lie-admissible Fock space of the hadronic mechanics, 8:30701 (J:US)
Multiple Production
Charged particle multiplicity distribution in anti pp interactions at 22.4 GeV/c, 8:30671 (R:SU)
Particle Decay
Unified theory of particle decay modes in electonic model, 8:30725 (J:US)
Particle Structure
Non-potential interaction and inseparable constituents of hadrons, 8:30723 (J:US)
Quark approach to Santilli's conjecture on hadronic structure, 8:30698 (J:US)
Quark Model
Topological theory of electric charge, 8:30705 (J:NL)
HAFNIUM
Neutron Reactions
Fast-neutron capture-cross-section measurements with the Argonne National Laboratory large-liquid-scintillator tank, 8:30752 (RA:US)
HANDLING (DATA)
See DATA PROCESSING
HANFORD RESERVATION
Ecology
Small mammals of a bitterbrush-cheatgrass community, 8:30353 (J:US)
The non-fisheries biological resources of the Hanford reach of the Columbia River, 8:30368 (J:US)
Geology
Draft site characterization analysis of the site characterization report for the Basalt Waste Isolation Project, Hanford, Washington Site. Main report and Appendices A through D, 8:29133 (R:US)
Hydrology
Draft site characterization analysis of the site characterization report for the Basalt Waste Isolation Project, Hanford, Washington Site. Main report and Appendices A through D, 8:29133 (R:US)
Radioactive Waste Management
High level waste management and characterization at the Hanford plant site, 8:29212 (BA:US)
HARBORS
Constraints
Coal slurry shiploading world trade applications, 8:28928 (BA:US)
Dredging
Alaska-coal industry forecasting, 8:28974 (RA:US)
HASTELLOY C
Chemical Composition
Corrosion studies on structural alloys for flue-gas desulfurization systems, 8:28863 (R:US)
Corrosion
Corrosion studies on structural alloys for flue-gas desulfurization systems, 8:28863 (R:US)
HASTELLOY C-276

HEAT TRANSFER
THERMAL EFFLUENTS
HEAT DISTRIBUTION SYSTEMS
Economic Analysis
District-heating-and-cooling system for communities through power-plant retrofit and distribution network. Phase 2, 8:29843 (R:US)
HEAT ENGINES
See also INTERNAL COMBUSTION ENGINES
NITINOL HEAT ENGINES
RANKINE CYCLE ENGINES
STIRLING ENGINES
State-of-the-art of heat engines, 8:30167 (RA:US)
Materials
AR and TD Fossil Energy Materials Program. Quarterly progress report for the period ending December 31, 1982, 8:28814 (R:US)
HEAT EXCHANGERS
Biological Fouling
Biofouling countermeasure evaluations for OTEC heat exchangers, 8:29390 (RA:US)
Biofouling and corrosion stdies at Keahole Point, Hawaii (1978-1980), 8:29396 (RA:US)
Macrofouling in simulated OTEC evaporators at Punta Tuna, Puerto Rico, 8:29395 (RA:US)
Microbial deposits, resistant to removal by the M.A.N. brush, on aluminum and titanium heat exchanger surfaces exposed to ambient seawater, 8:29394 (RA:US)
New flow cell technology for assessing primary biofouling in oceanic heat exchangers, 8:29397 (RA:US)
Cleaning
Biofouling countermeasure evaluations for OTEC heat exchangers, 8:29390 (RA:US)
Microbial deposits, resistant to removal by the M.A.N. brush, on aluminum and titanium heat exchanger surfaces exposed to ambient seawater, 8:29394 (RA:US)
Corrosion
Biofouling and corrosion stdies at Keahole Point, Hawaii (1978-1980), 8:29396 (RA:US)
Heat Transfer
Hydrodynamic prediction of multidimensional single- and two-phase flow in rod arrays. Progress report, May 15-December 31, 1982 (LMFBR), 8:29585 (R:US)
Thermal-hydraulic posttest analysis for the ANL/MCTF 360° model heat-exchanger water test under mixed convection (LMFBR), 8:29632 (R:US)
Hydraulics
Hydrodynamic prediction of multidimensional single- and two-phase flow in rod arrays. Progress report, May 15-December 31, 1982 (LMFBR), 8:29585 (R:US)
Thermal-hydraulic posttest analysis for the ANL/MCTF 360° model heat-exchanger water test under mixed convection (LMFBR), 8:29632 (R:US)
Materials Testing
Materials considerations for the aluminum-tubed OTEC test article heat exchangers, 8:29387 (RA:US)
Pressure Drop
Shellside waterflow pressure drop and distribution in industrial-size test heat exchanger, 8:29819 (R:US)
Testing
Heat exchanger tests at Argonne National Laboratory, 8:29385 (RA:US)
HEAT FLOW
Probes
Design and construction of large-area heat-flow sensors for measuring building heat flows, 8:29806 (R:US)
HEAT METERS
Design
Special tube monitors (STMs) for OTEC, 8:29391 (RA:US)
Uses
Special tube monitors (STMs) for OTEC, 8:29391 (RA:US)
HEAT OF VAPORIZATION
See VAPORIZATION HEAT
HEAT PIPES
Passive heat-transfer means for nuclear reactors (Patent; LMFBR), 8:29589 (P:US)
Energy Storage Systems
Entirely passive heat pipe apparatus capable of operating against gravity (Patent), 8:29423 (P:US)
Gravitation
Entirely passive heat pipe apparatus capable of operating against gravity (Patent), 8:29423 (P:US)
HEAT PUMPS
Absorption Refrigeration Cycle
Absorption heat pump system (Patent), 8:29810 (P:US)
Absorption-heat-pump system (Patent), 8:29809 (P:US)
Adiabatic Processes
Absorption-heat-pump system (Patent), 8:29809 (P:US)
Coefficient of Performance
Device and method for measuring the coefficient of performance of a heat pump (Patent), 8:29812 (P:US)
Design
Absorption heat pump system (Patent), 8:29810 (P:US)
Absorption-heat-pump system (Patent), 8:29809 (P:US)
Refrigerants
Refrigerant mixtures for sorption heat pumps, 8:29815 (TJ:GB)
Stirling Engines
Stirling-powered heat pumps - a worthwhile R and D project, 8:29807 (R:US)
Working Fluids
Refrigerant mixtures for sorption heat pumps, 8:29815 (TJ:GB)
HEAT RECOVERY EQUIPMENT
Materials
AR and TD Fossil Energy Materials Program. Quarterly progress report for the period ending December 31, 1982, 8:28814 (R:US)

HEBER GEOTHERMAL FIELD
Geothermal Power Plants
Heber Binary Project. Binary cycle geothermal demonstration power plant, 8:29450 (RA:US)

HELICAL ROTARY SCREW EXPANDER
Chemical Vapor Deposition
Chemical vapor deposition of sialon (Patent), 8:28969 (P:US)

HELIOS FACILITY
Control
Gaseous saturable absorbers for the Helios CO_2 laser system, 8:30956 (J:US)

HELIOTRON
Equilibrium Plasma
Equilibrium and stability studies for high-beta plasmas in torsatron/heliotron devices, 8:30848 (R:US)
Plasma Instability
Equilibrium and stability studies for high-beta plasmas in torsatron/heliotron devices, 8:30848 (R:US)
Three-Dimensional Calculations
Equilibrium and stability studies for high-beta plasmas in torsatron/heliotron devices, 8:30848 (R:US)

HELIUM
Collisions
Long range interaction between a He atom and a semiconductor surface, 8:30658 (J:NL)
Energy-Level Transitions
Doubly excited states in some light atoms, 8:30649 (J:NL)
Gaseous Diffusion
Helium migration in alpha-irradiated beryllium, 8:29881 (R:SU:In Russian)
Photoionization
Studies of photoionization processes from ground-state and excited-state atoms and molecules, 8:30635 (R:US)

HELIUM 3
Excitation
Elementary excitations in liquid ^{3}He, 8:30664 (J:GB)
Hyperfine Structure
Hyperfine structures of the nd^{1}D(n=3-8) states of ^{3}He I, 8:30651 (J:NL)

HELIUM 3 TARGET
Proton Reactions
Study of the ^{3}He(p,π^+)^{4}He reaction close to threshold, 8:30735 (R:FR)

HELIUM 4 REACTIONS
See ALPHA REACTIONS

HELIUM 4 TARGET
Alpha Reactions
Problems of the theory of light nucleus inelastic interactions, 8:30779 (R:SU:In Russian)

HELIUM IONS
Electronic Structure
Comparisons between theory and experiment in two electron systems, 8:30650 (J:NL)
Ion Spectroscopy
Formation of Rydberg states in fast ion-atom collisions, 8:30638 (R:US)
Rydberg Correction
Formation of Rydberg states in fast ion-atom collisions, 8:30638 (R:US)

HERMITE POLYNOMIALS
Quantum Operators
Extension of the Kibble-Slepian formula for hermite polynomials using boson operator methods, 8:30845 (J:US)

HETEROCHROMATIN
Structural Chemical Analysis
Histone variants and histone modifications associated with constitutive heterochromatin, 8:30403 (RA:US)

HETEROCYCLIC COMPOUNDS
See also FURANS
PSORALEN
PYRANS
THIOPHENE
Gas Chromatography
Identification by gas-liquid chromatography-mass spectrometry of low-molecular-weight products from the aqueous alkaline degradation of cellulose, 8:30061 (J:NL)

Liquid Column Chromatography
Identification by gas-liquid chromatography-mass spectrometry of low-molecular-weight products from the aqueous alkaline degradation of cellulose, 8:30061 (J:NL)
Mass Spectroscopy
Identification by gas-liquid chromatography-mass spectrometry of low-molecular-weight products from the aqueous alkaline degradation of cellulose, 8:30061 (J:NL)
HETEROCYCLIC OXYGEN COMPOUNDS
ENDOR
Electron nuclear double resonance study of the spin-label tanol (tempol) oriented in the inclusion compound 2'-hydroxy-2,4,4,7,4'-pentamethyiflavan, 8:30045 (J:US)
HETEROGENEOUS REACTOR CORES
Asymmetry
Effects of cell asymmetry on the performance of a large heterogeneous critical assembly, 8:29609 (R:FR)

Stochasticity induced by coherent wavepackets, 8:30852 (R:US)
Wall Effects
Effect of wall corrugations on lower-hybrid-wave launching and reflection, 8:30894 (R:US)
Waveguides
Surface modification to waveguides (Patent), 8:30949 (P:US)
HIGH-LEVEL RADIOACTIVE WASTES
Land Transport
Risk assessment for the transportation of radioactive zeolite liners, 8:29118 (BA:US)
Leaching
Effects of waste composition and loading on the chemical durability of a borosilicate glass, 8:29221 (BA:US)
Effects of radiation damage and radiolysis on the leaching of vitrified waste, 8:29974 (BA:US)
Leaching behavior of sintered modified SYNROC-B waste forms: effect of HLW addition, 8:29196 (BA:US)
Partition
Development of partitioning method - cold and semihot experimental works with partitioning testing apparatus, 8:29130 (R:JP:In Japanese)
Radioactive Waste Disposal
Utilization of charged particle backscattering to study the near surface region of glasses. Application to depth profiling of lanthanium, cerium, throium and uranium induced by aqueous leaching, 8:29994 (BA:US)
Waste Transportation
Radioactive waste management, 8:29245 (BA:SU:In Russian)
HIGH-TEMPERATURE FUEL CELLS
See also MOLTEN CARBONATE FUEL CELLS
Design
Fabrication of planar solid-oxide fuel cells. Final report, October 1982-February 1983, 8:29786 (R:US)
Solid Electrolytes
Fabrication of planar solid-oxide fuel cells. Final report, October 1982-February 1983, 8:29786 (R:US)
HILACS
Cooling
Cooling the Argonne National Laboratory superconducting heavy-ion linac with two refrigerators in parallel, 8:30244 (J:US)
Cryogenics
Cooling the Argonne National Laboratory superconducting heavy-ion linac with two refrigerators in parallel, 8:30244 (J:US)
Refrigerating Machinery
Cooling the Argonne National Laboratory superconducting heavy-ion linac with two refrigerators in parallel, 8:30244 (J:US)
HISTONES
Acetylation
Sodium butyrate induced structural changes in HeLa cell chromatin, 8:30413 (J:US)
Biochemical Reaction Kinetics
Synthesis of histone H1° in synchronized Chinese hamster cells, 8:30404 (RA:US)
Biochemistry
Histone variants and histone modifications associated with constitutive heterochromatin, 8:30403 (RA:US)
Biosynthesis
Synthesis of histone H1° in synchronized Chinese hamster cells, 8:30404 (RA:US)
Radionuclide Kinetics
The turnover of tritium in cell nuclei, chromatin, DNA, and histone, 8:30520 (J:US)
Ultrastructural Changes
Sodium butyrate induced structural changes in HeLa cell chromatin, 8:30413 (J:US)
HOG FUEL
See WOOD WASTES
HOLIFIELD HEAVY ION RESEARCH FACILITY
See HHIRF
HOLMIUM 165 TARGET
Neutron Reactions
Fast neutron capture cross section measurement with pulse-height weighting technique, 8:30734 (RA:US)
Production
Preparation of self-supporting holmium targets, 8:30247 (BA:US)

HOPPERS
Valves
Lockhopper valve testing and development program, 8:28803 (R:US)
HORDEUM
See BARLEY
HOSPITALS
Photovoltaic Power Supplies
Intermediate photovoltaic system application experiment operational performance report. Volume 8. For G.N. Wilcox Memorial Hospital, Kauai, Hawaii for December 1982, 8:29340 (R:US)
HOT CELLS
Use of lasers at the Los Alamos Hot-Cell Facility, 8:30103 (R:US)
HOT GAS CLEANUP
Efficiency
Alkali-metal-vapor removal from pressurized fluidized-bed-combustor flue gas. Annual report, October 1981-September 1982, 8:29526 (R:US)
Research Programs
Test and evaluation of hot gas cleanup devices. Phase I and II. Task I. Technical progress report, October 1, 1982-December 31, 1982, 8:28865 (R:US)
HOT WATER HEATERS
See WATER HEATERS
HOUSES
Indoor Air Pollution
Preliminary results of a forty-home indoor air pollutant monitoring study, 8:30332 (R:US)
HTGR PEACH BOTTOM REACTOR

HTGR TYPE REACTORS
See also PEACH BOTTOM-1 REACTOR
Cogeneration
HTGR for cogeneration applications: design and cost evaluation, 8:29604 (R:US)
Construction
US central station nuclear electric generating units: significant milestones. Status as of October 1, 1982, 8:29595 (R:US)
Cost
Gas-Cooled Thermal Reactor Program. Annual technical progress report for the period ending September 30, 1981, 8:29606 (R:US)
High temperature gas-cooled reactor sensible energy transmission and storage concept screening report, 8:29605 (R:US)
High-temperature gas-cooled reactor steam cycle/cogeneration: lead project strategy plan, 8:29602 (R:US)
HTGR for cogeneration applications: design and cost evaluation, 8:29604 (R:US)
Design
HTGR for cogeneration applications: design and cost evaluation, 8:29604 (R:US)
Fuel Cycle
Reactors and fuel production, 8:29537 (R:US)
In Core Instruments
Evaluation of Toshiba Type HS-2 fission chamber, 8:29572 (R:US)
Legal Aspects
Licensee Event Report (LER) compilation: for month of March 1983, 8:29683 (R:US)
Market
Gas-Cooled Thermal Reactor Program. Annual technical progress report for the period ending September 30, 1981, 8:29606 (R:US)
Planning
High-temperature gas-cooled reactor steam cycle/cogeneration: lead project strategy plan, 8:29602 (R:US)
US central station nuclear electric generating units: significant milestones. Status as of October 1, 1982, 8:29595 (R:US)
Pressure Vessels
HTGR Plant Technology Program. Semiannual report for the period ending September 24, 1982, 8:29571 (R:US)
Primary Coolant Circuits
HTGR Plant Technology Program. Semiannual report for the period ending September 24, 1982, 8:29571 (R:US)
Process Heat
Gas-Cooled Thermal Reactor Program. Annual technical progress report for the period ending September 30, 1981, 8:29607 (R:US)
Reactor Cores
Integrated Compartment Method appication to the transient heat transfer in gas-cooled reactor, 8:29569 (R:US)
Integrated compartment method application to the transient heat transfer in gas-cooled reactor, 8:29573 (R:US)
Reactor Materials
HTGR Plant Technology Program. Semiannual report for the period ending September 24, 1982, 8:29571 (R:US)
Integrated compartment method application to the transient heat transfer in gas-cooled reactor, 8:29573 (R:US)
Recent developments in graphite, 8:29953 (R:US)
Reactor Operation
US central station nuclear electric generating units: significant milestones. Status as of October 1, 1982, 8:29595 (R:US)
Reactor Safety
Licensee Event Report (LER) compilation: for month of March 1983, 8:29683 (R:US)
Safety research programs sponsored by Office of Nuclear Regulatory Research. Quarterly progress report, July 1-September 30, 1982, 8:29684 (R:US)
RHR Systems
HTGR Plant Technology Program. Semiannual report for the period ending September 24, 1982, 8:29571 (R:US)
Specifications
Gas-Cooled Thermal Reactor Program. Annual technical progress report for the period ending September 30, 1981, 8:29606 (R:US)
High temperature gas-cooled reactor sensible energy transmission and storage concept screening report, 8:29605 (R:US)
High-temperature gas-cooled reactor steam cycle/cogeneration: utility/user functional requirements, 8:29603 (R:US)
Reactors and fuel production, 8:29537 (R:US)
Steam Generators
HTGR Plant Technology Program. Semiannual report for the period ending September 24, 1982, 8:29571 (R:US)
Steam Systems
Direct steam-transmission design and costs. Final report, 8:29601 (R:US)
Thermochemical Processes
Gas-Cooled Thermal Reactor Program. Annual technical progress report for the period ending September 30, 1981, 8:29607 (R:US)
Transients
Integrated Compartment Method appication to the transient heat transfer in gas-cooled reactor, 8:29569 (R:US)
Integrated compartment method application to the transient heat transfer in gas-cooled reactor, 8:29573 (R:US)

Chemical Analysis
Dielectric constant detector for the determination of tri-n-butylphosphate in mixtures with hydrocarbons, 8:30001 (J:NL)
Conformational Changes
Analysis of hydrocarbon chain conformation using double quantum coherence ^{13}C NMR, 8:30042 (J:US)
Dielectric Properties
Dielectric constant detector for the determination of tri-n-butylphosphate in mixtures with hydrocarbons, 8:30001 (J:NL)
Molecular Weight
Characterization of Cerro Negro crude. Part I. Physical and chemical separations (Project shared by Bartlesville Energy Technology Center, US DOE, and Institute de Tecnologico del Venezolana Petroleo), 8:29055 (J:US)
Nuclear Magnetic Resonance
Analysis of hydrocarbon chain conformation using double quantum coherence ^{13}C NMR, 8:30042 (J:US)
Phase Diagrams
Amphiphilic properties of low-equivalent-weight organic salts, 8:30039 (R:US)
Phase Studies
Amphiphilic properties of low-equivalent-weight organic salts, 8:30039 (R:US)
Phases and interfacial tensions of aqueous/hydrocarbon systems containing low-equivalent-weight organic salts, 8:28996 (J:US)
Radiolysis
Time-resolved pulsed EPR: microwave and optical detection, 8:30075 (R:US)
Structural Chemical Analysis
Characterization of Cerro Negro crude. Part I. Physical and chemical separations (Project shared by Bartlesville Energy Technology Center, US DOE, and Institute de Tecnologico del Venezolana Petroleo), 8:29055 (J:US)
HYDROCHLORIC ACID
Electron-Molecule Collisions
Electron energy loss spectra in hydrogen chloride, 8:30626 (RA:US)
HYDRODYNAMIC MODEL
Computer Codes
Nonlinear hydrodynamics. Lecture 9, 8:30616 (R:US)
HYDROELECTRIC POWER PLANTS
See also MICRO-SCALE HYDROELECTRIC POWER PLANTS
PUMPED STORAGE POWER PLANTS
Construction
Hydroelectric plant construction cost and annual production expenses - 1980 (Contains glossary), 8:29297 (R:US)
Feasibility Studies
Study of the interrelationships between minimum flow release policies and hydroelectric power development in New England. Final report, 8:29294 (R:US)
Operating Cost
Hydroelectric plant construction cost and annual production expenses - 1980 (Contains glossary), 8:29297 (R:US)
Water Requirements
Study of the interrelationships between minimum flow release policies and hydroelectric power development in New England. Final report, 8:29294 (R:US)
HYDROFLUORIC ACID
Electronic Structure
Electronic structure of Rydberg states of H_3, NeH, H_3F, H_3O, NH_4, and CH_3 molecules, 8:30012 (J:US)
HYDROGEN
Absorption
Concerning adsorbed and absorbed hydrogen on and in ferrous metals, 8:29867 (RA:US)

Adsorption
Concerning adsorbed and absorbed hydrogen on and in ferrous metals, 8:29867 (RA:US)
Environmental degradation of engineering materials in hydrogen, 8:29865 (R:US)
Hydrogen behaivor in coated and uncoated low alloy steels (Type 4340 steels), 8:29868 (RA:US)
Microstructural effects on H motion in fcc stainless alloys, 8:29870 (RA:US)
Adsorption Isotherms
Low-energy process for separating hydrogen and methane in advanced coal-gasification processes. Final report, September 8, 1980-January 7, 1983, 8:28801 (R:US)
Chemisorption
Chemisorption of hydrogen on titanium: embedding theory and comparisons with small clusters, 8:30024 (J:NL)
Consumption Rates
Heavy-recycle-solvent studies in two-stage coal liquefaction. Third technical progress report, December 11, 1982-March 10, 1983, 8:28808 (R:US)
Desorption
Microstructural effects on H motion in fcc stainless alloys, 8:29870 (RA:US)
Promoter modifications of catalytic activity and selectivity. Progress report, April 1, 1982-March 31, 1983, 8:29288 (R:US)
Diffusion
Environmental degradation of engineering materials in hydrogen, 8:29865 (R:US)
Gas-phase hydrogen permeation through alpha zirconium: pressure and geometry dependence, 8:29871 (RA:US)
Hydrogen diffusion and trapping in metals by a periodic technique, 8:29869 (RA:US)
Electronic Structure
Electronic structure of Rydberg states of H_3, NeH, H_3F, H_3O, NH_4, and CH_5 molecules, 8:30012 (J:US)
Ion-Molecule Collisions
Search for existence of D_2^-, D_3^-, and HD_2^- formed in double-electron-capture collisions, 8:30645 (R:US)
Metallurgical Effects
AR and TD Fossil Energy Materials Program. Quarterly progress report for the period ending December 31, 1982, 8:28814 (R:US)
Environmental degradation of engineering materials in hydrogen, 8:29865 (R:US)
Separation Processes
Low-energy process for separating hydrogen and methane in advanced coal-gasification processes. Final report, September 8, 1980-January 7, 1983, 8:28801 (R:US)

HYDROGEN 1 MINUS BEAMS
Beam Pulsers
Pulsed beam chopper for the PSR at LAMPF, 8:30229 (R:US)
Beam Strippers
Laser photoionization of H^0 beams for charge-changing injection, 8:30233 (R:US)
Stripping
Charge exchange injection at the AGS, 8:30215 (R:US)

HYDROGEN 1 TARGET
Spin Orientation
Systematic errors in polarization measurements of polarized proton targets by the Q-meter method, 8:30308 (R:SU:In Russian)

HYDROGEN 2
See DEUTERIUM

HYDROGEN 3
See TRITIUM

HYDROGEN ADDITIONS
Thermodynamics
Study of the kinetics and thermodynamics of hydrogen in Pd-based alloys. Progress report, 8:29930 (R:US)

HYDROGEN CHLORIDES

Pilot Plants
Engineering support services for the DOE/GRI Coal Gasification Research Program. Quarterly technical progress report for the period October-December 1979, 8:28796 (R:US)
HYLIFE CONVERTER
High Yield Lithium Injection Fusion Energy Converter.
Electromagnetic Pumps
Electromagnetic pumping of liquid lithium in inertial confinement fusion reactors, 8:30928 (R:US)
HYPERFRAGMENTS
See HYPERNUCLEI
HYPERNUCLEI
Mass Formulae
Mass relations in systems of SU (n) symmetric particles with account for multiparticle forces, 8:30681 (R:SU:In Russian)
Meetings
Proceedings of the international conference on hypernuclear and kaon physics, 8:30731 (R:DE)
Research Programs
Hyperon and hypernuclear physics with intense beams, 8:30696 (R:US)
SU Groups
Mass relations in systems of SU (n) symmetric particles with account for multiparticle forces, 8:30681 (R:SU:In Russian)
HYPERON REACTIONS
Capture
Hyperon and hypernuclear physics with intense beams, 8:30696 (R:US)
HYPERTONIC SOLUTIONS
Radiosensitivity Effects
Effect of hypertonicity and X radiation on DNA synthesis in normal and ataxia-telangiectasia cells, 8:30518 (J:US)

I

IAEA
Radioactive Waste Management
IAEA's role in radioactive waste management, particularly for low- and intermediate-level wastes, 8:29182 (BA:US)
I-BEAM TYPE REACTORS
Ion Sources
Progress at NRL and Cornell in light ion beam research for inertial-confinement fusion, 8:30964 (BA:XA)
Research Programs
Progress at NRL and Cornell in light ion beam research for inertial-confinement fusion, 8:30964 (BA:XA)
Progress toward fusion with light ions, 8:30965 (BA:XA)
ICE
Photon Collisions
Photodissociative ionization of amorphous ice, 8:30655 (J:NL)
ICELAND
Geothermal Power Plants
Small-scale geothermal electric power units in Iceland, 8:29458 (RA:US)
ICR HEATING
Fast-wave ion cyclotron heating in the Princeton Large Torus, 8:30878 (BA:XA)
ICRF heating, particle transport and fluctuations in tokamaks, 8:30877 (BA:XA)
Bernstein Mode
Efficient ion heating via finite-Larmor-radius ICRF, 8:30861 (R:US)
Coupling
Antenna-plasma coupling theory for ICRF heating, 8:30892 (R:US)
Dispersion Relations
Heating experiments in the ion cyclotron range of frequencies on EBT-S, 8:30869 (J:AT)
Microwave Equipment
Design of a high-power ICRF experiment for DIII, 8:30900 (R:US)
Monte Carlo Method
Monte Carlo studies of tandem mirror plasmas interacting with waves in the ion cyclotron range of frequencies (ICRF). Progress report, January 1, 1983-March 31, 1983, 8:30850 (R:US)
Waveguides
Plasma heating by a wide ksub(parallel)-spectrum waveguide system in the ion cyclotron range of frequencies, 8:30972 (BA:XA)
IDAHO CHEMICAL PROCESSING PLANT
Radioactive Waste Facilities
New waste calcining facility at ICPP, 8:29211 (BA:US)
Radioactive Waste Management
High level waste management at the Idaho Chemical Processing Plant, 8:29210 (BA:US)
Radioactive Waste Processing
New waste calcining facility at ICPP, 8:29211 (BA:US)
IGNEOUS ROCKS
Heat Transfer
Programme of research into the management and storage of radioactive waste. Thermal phenomena in crystalline rock, 8:29122 (R:GB)
Permeability
Programme of research into the management and storage of radioactive waste. Thermal phenomena in crystalline rock, 8:29122 (R:GB)
IGNITION SYSTEMS
Design
Enhanced ignition for I.C. engines with premixed gases, 8:29859 (J:US)
Performance
Enhanced ignition for I.C. engines with premixed gases, 8:29859 (J:US)
Reduction in fuel consumption in internal combustion engines. Final report, 8:29857 (R:US)
IGT HYDROGASIFICATION PROCESS
See HYGAS PROCESS
ILLINOIS
Oil Fields
Loudon surfactant flood pilot test, 8:29046 (J:US)
Measuring well injection profiles of polymer-containing fluids, 8:29047 (J:US)

ILLINOIS BASIN
Geographically, an area that includes all the coal reserves of Illinois, Indiana, and the western part of Kentucky.
Black Shales
Distribution of gas, organic carbon, and vitrinite reflectance in the eastern Devonian gas shales and their relationship to the geologic framework, 8:29060 (R:US)
Stratigraphy
Distribution of gas, organic carbon, and vitrinite reflectance in the eastern Devonian gas shales and their relationship to the geologic framework, 8:29060 (R:US)
ILLUMINATION SYSTEMS
See LIGHTING SYSTEMS
ILMENITE
Interstitials
Muon spin rotation in antiferromagnetic oxides, 8:29964 (J:US)
IMAGE INTENSIFIERS
Microchannel Electron Multipliers
Testing of gated microchannelplate (MCP) intensifiers at EG and G/LAO, 8:30305 (R:US)
Performance Testing
Testing of gated microchannelplate (MCP) intensifiers at EG and G/LAO, 8:30305 (R:US)
IMAGE PROCESSING
Computer Codes
Program package for creation and updating of the processed events catalogue, 8:30284 (R:SU:In Russian)
Programming
Organization of the processed event catalogue on the basis of direct access files, 8:30283 (R:SU:In Russian)
IMINOUREA
See GUANIDINES
IMMUNE REACTIONS
Biological Pathways
Effect of shale oil and ultraviolet light on delayed hypersensitivity in mice, 8:30536 (RA:US)
Biological Radiation Effects
Deoxyribonucleoside-urea and some immunological changes in postirradiation effects, 8:30490 (RA:DE)
Specificity
Recruitment of antibody-forming cells in the lung after local immunization is nonspecific, 8:30460 (J:US)
IMPERIAL VALLEY
Geothermal Exploration
Status of geothermal projects - San Diego Gas and Electric, 8:29447 (RA:US)
Geothermal Power Plants

Photoionization of the Kr_2 dimer, 8:30069 (J:NL)
Molecular Structure
Photoionization of the Kr_2 dimer, 8:30069 (J:NL)
Photoionization
Photoionization of the Kr_2 dimer, 8:30069 (J:NL)
KRYPTON 85
Separation Processes
Equilibrium theory of a pressure swing adsorption process, 8:29113 (J:GB)
Uses
Applications developed for byproduct ^{85}Kr and tritium, 8:29283 (R:US)
KURCHATOVIUM
See ELEMENT 104

L

LA CROSSE BOILING WATER REACTOR
See LACBWR REACTOR
LABELLED COMPOUNDS
Compounds labelled with either stable or radioactive isotopes.
See also TRITIUM COMPOUNDS
Chemical Preparation
Biochemical synthesis with stable isotopes, 8:30448 (RA:US)
Organic synthesis with stable isotopes (L-arginine-1-^{13}C), 8:30087 (RA:US)
LABORATORIES
Transport
Mobile laboratory: chemical analysis at geothermal sites, 8:29470 (RA:US)
Uses
Mobile laboratory: chemical analysis at geothermal sites, 8:29470 (RA:US)
LACBWR REACTOR
Legal Aspects
Integrated plant safety assessment: Systematic Evaluation Program. LaCrosse Boiling Water Reactor, Dairyland Power Cooperative, Docket No. 50-409, 8:29679 (R:US)
Reactor Safety
Integrated plant safety assessment: Systematic Evaluation Program. LaCrosse Boiling Water Reactor, Dairyland Power Cooperative, Docket No. 50-409, 8:29679 (R:US)
LACTIC ACID
Labelling
Biochemical synthesis with stable isotopes, 8:30448 (RA:US)
LAMPF LINAC
Accelerator Facilities
Stereo: cylindrical drift chamber for muon decay experiments at LAMPF, 8:30291 (R:US)
Beam Dynamics
Solution to the transverse-phase-space time-dependence problem with LAMPF's high-intensity H^+ beam, 8:30192 (R:US)
Computerized Control Systems
Data-acquisition software for the LAMPF control system, 8:30231 (R:US)
Klystrons
Computer modeling of the klystron, 8:30235 (R:US)

Remote Handling Equipment
Monitor 1983, 8:30239 (R:US)
Targets
Graphite targets at LAMPF, 8:30240 (R:US)
LAMPS
See LIGHT BULBS
LAND FILLS
See SANITARY LANDFILLS
LAND LEASING
Environmental Impact Statements
Final Environmental Impact Statement on oil and gas leasing in the National Petroleum Reserve in Alaska, 8:30398 (R:US)
LANDFILLS
See SANITARY LANDFILLS
LANTHANIDES
See RARE EARTHS
LANTHANUM
Neutron Reactions
Fast-neutron capture-cross-section measurements with the Argonne National Laboratory large-liquid-scintillator tank, 8:30752 (RA:US)
Radiation Scattering Analysis
Utilization of charged particle backscattering to study the near surface region of glasses. Application to depth profiling of lanthanium, cerium, throium and uranium induced by aqueous leaching, 8:29994 (BA:US)
LANTHANUM ALLOYS
Electronic Structure
Electronic structure and surface oxidation of the Haucke compounds $CaNi_5$, YNi_5, $LaNi_5$ and $ThNi_5$, 8:29894 (J:CH)
Oxidation
Electronic structure and surface oxidation of the Haucke compounds $CaNi_5$, YNi_5, $LaNi_5$ and $ThNi_5$, 8:29894 (J:CH)
LANTHANUM CHROMITES
See CHROMIUM OXIDES
LANTHANUM PHOSPHATES
Chemical Preparation
Preparation of metal phosphates by a reaction using boron phosphate, 8:30017 (P:US)
LARGE COIL PROGRAM
Data Acquisition Systems
User's guide to FFE: a fast front end data acquisition program, 8:30918 (R:US)
LASER FUSION REACTORS
See also HYLIFE CONVERTER
Breeding Blankets
CASCADE: a centrifugal-action solid-breeder reaction chamber, 8:30930 (R:US)
Optical Systems
Effect of nonlinear refraction on beam brightness in laser fusion applications, 8:30979 (J:US)
Research Programs
Progress in inertial fusion research at Los Alamos Scientific Laboratory, 8:30958 (BA:XA)
LASER IMPLOSIONS
Radiation Detectors
Developments in high-speed pyroelectric detectors, 8:30314 (J:US)
LASER ISOTOPE SEPARATION
Isotope separation by laser means (Patent), 8:29106 (P:US)
Research Programs
Progress report, Chemistry and Materials Division, 1 April - 30 June, 1981, 8:30807 (R:CA)
LASER TARGETS
Energy Transfer
Convective transport in laser target plasmas, 8:30907 (R:US)
Fabrication
Laser fusion. Quarterly progress report, Aporil-June 1982, 8:30906 (R:US)
Hydrodynamics
Interaction of short-wavelength laser radiation with spherical-shell targets, 8:30962 (BA:XA)
Inspection
Laser fusion. Quarterly progress report, Aporil-June 1982, 8:30906 (R:US)
Laser Implosions
Laser fusion studies at Naval Research Laboratory, 8:30961 (BA:XA)
Parametric Instabilities
Scaling of laser-plasma interactions with laser wavelength and plasma size, 8:30929 (R:US)
Research Programs
Laser fusion. Quarterly progress report, Aporil-June 1982, 8:30906 (R:US)
Vapor Deposited Coatings
Mechanical properties of vapor-deposited thin metallic films: a status report, 8:29264 (R:US)
LASER-PRODUCED PLASMA
Energy Transfer
Convective transport in laser target plasmas, 8:30907 (R:US)
Parametric Instabilities
Scaling of laser-plasma interactions with laser wavelength and plasma size, 8:30929 (R:US)
Two-Dimensional Calculations
ANTHEM: a two-dimensional multicomponent self-consistent hydro-electron transport code for laser-matter interaction studies, 8:30913 (R:US)
LASERS
Light Amplification by Stimulated Emission of Radiation.
See also FREE ELECTRON LASERS
GAS LASERS
Progress in uv damage testing at Los Alamos (Laser damage test facility), 8:30102 (R:US)
Biological Effects
Annual research progress report, FY 1980. Annual report 1 Oct 79-30 Sep 80, 8:30581 (R:US)
Frequency Converters
Optical harmonic generator, 8:30120 (P:US)
Monitoring
Nonionizing radiation 583, 8:30583 (R:US)
Pulse Generators
Microwave-triggered laser switch, 8:30121 (P:US)
LASL
Reviews
Los Alamos science. Volume 4, No. 7, 8:30980 (R:US)
LATENT HEAT OF VAPORIZATION
See VAPORIZATION HEAT
LATENT HEAT STORAGE
Technology Assessment
Review of latent heat storage technology, 8:29706 (R:US)
LATHES
Automation
Ultraprecision machining of optics at Los Alamos, 8:30115 (J:US)
Performance
Ultraprecision machining of optics at Los Alamos, 8:30115 (J:US)
LATTICE FIELD THEORY
Higgs Model
Phase structure, magnetic monopoles and vortices in the lattice Abelian Higgs model, 8:30715 (R:DD)
Monte Carlo Method
Short-distance expansion of Wilson loops, gluon condensation and Monte Carlo lattice results, 8:30716 (R:DD)
Reviews
Lattice theory of quark confinement, 8:30719 (J:US)
LAWRENCIUM ISOTOPES
Spontaneous Fission
Rapid disappearance of shell effects in the fission of transfermium nuclei, 8:30776 (R:US)
LEACHATES
Carcinogen Screening
Development of environment assessment screening criteria for coal conversion solid wastes. Final draft report, 8:28981 (R:US)
Chemical Analysis
Comparison of three solid waste batch leach testing methods and a column leach test method, 8:28871 (J:US)
Control by alkaline neutralization of trace elements in acidic coal cleaning waste leachates, 8:28869 (J:US)
Development of a method for determining the leachability of organic compounds from solid wastes, 8:30361 (J:US)

Chemical Composition
Control by alkaline neutralization of trace elements in acidic coal cleaning waste leachates, 8:28869 (J:US)
Environmental evaluation of the University of Minnesota-Duluth coal gasifier, 8:28874 (R:US)
Environmental Transport
Subsurface transport of contaminants from energy process waste leachates, 8:30357 (RA:US)
Mutagen Screening
Development of environment assessment screening criteria for coal conversion solid wastes. Final draft report, 8:28981 (R:US)
Teratogen Screening
Development of environment assessment screening criteria for coal conversion solid wastes. Final draft report, 8:28981 (R:US)
Toxicity
Development of environment assessment screening criteria for coal conversion solid wastes. Final draft report, 8:28981 (R:US)
Environmental evaluation of the University of Minnesota-Duluth coal gasifier, 8:28874 (R:US)

LEAD
Biological Effects
Operant behavior of rats exposed to lead before or after weaning, 8:30561 (J:US)
Diffusion
Laboratory measurements of contaminant attenuation of uranium mill tailings leachates by sediments and clay liners, 8:29249 (R:US)
Neutron Reactions
Measurements of the spallation and fission product production for depleted uranium and natural lead targets bombarded by 1100 MeV protons, 8:29278 (RA:US)
Monte Carlo study of the energy deposition of a flux of spallation neutrons in various samples, 8:29281 (RA:US)
Proton Reactions
Measured and calculated neutron yields for 100 MeV protons on thick targets of Pb and Li, 8:29279 (RA:US)
Solvent Extraction
Determination of extraction equilibria for several metals in the development of a process designed to recover aluminum and other metals from coal combustion ash, 8:28821 (J:NL)
Spectrophotometry
Comparison of three solid waste batch leach testing methods and a column leach test method, 8:28871 (J:US)

LEAD 208 TARGET
Magnesium 26 Reactions
Quadrupole moment of ^{26}Mg as a test of shell-model interactions, 8:30739 (R:AU)

LEAD ALLOYS
Convection
Thermofluid dynamics of the liquid lead-bismuth target for the spallation neutron source at SIN, 8:29272 (RA:US)
Corrosion
Compatibility of stainless steel with Pb-17 at. pct. Li, 8:29893 (J:US)
Tritium
Compatibility of stainless steel with Pb-17 at. pct. Li, 8:29893 (J:US)

LEAD OXIDES
Impurities
Lead deficiency and hydrogen content in battery electrode β-PbO_2, 8:29710 (R:US)
Neutron Diffraction
Lead deficiency and hydrogen content in battery electrode β-PbO_2, 8:29710 (R:US)
Vacancies
Lead deficiency and hydrogen content in battery electrode β-PbO_2, 8:29710 (R:US)

LEAD-ACID BATTERIES
Electrodes
Lead deficiency and hydrogen content in battery electrode β-PbO_2, 8:29710 (R:US)
Performance Testing
Lead-acid battery pulse-discharge investigation. Phase II. Final report, 8:29708 (R:US)

LEAST SQUARE FIT
Numerical Solution
Numerical methods for large sparse linear least-squared problems, 8:30997 (R:US)

LEAVES
Injuries
Resistance to injury by sulfur dioxide, 8:30443 (J:US)
Life Span
Longevity of guard cell chloroplasts in falling leaves: implication for stomatal function and cellular aging, 8:30457 (J:US)

LEPTONS

LIQUID METALS
Solvent Properties
Diffusion of oxygen in liquid-metal systems, 8:29877 (R:US)
LIQUIDS
See also COAL LIQUIDS
LIQUID METALS
Absorptivity
Apparatus and method for quantitative measurement of small differences in optical absorptivity between two samples using differential interferometry and the thermooptic effect, 8:30312 (P:US)
Viscosity
Free disk as an absolute viscometer and the viscosity of water in the range 25 to 150°C, 8:30316 (J:DE)
LITHIUM
Membrane Transport
Transport of alkali metal cations across liquid membranes by crown ether carboxylic acids, 8:29995 (J:NL)
Proton Reactions
Measured and calculated neutron yields for 100 MeV protons on thick targets of Pb and Li, 8:29279 (RA:US)
Separation Processes
Transport of alkali metal cations across liquid membranes by crown ether carboxylic acids, 8:29995 (J:NL)
LITHIUM ALLOYS
Corrosion
Compatibility of stainless steel with Pb-17 at. pct. Li, 8:29893 (J:US)
LITHIUM BROMIDES
Solvent Properties
Solubility of Li_2S in LiF-LiCl-LiBr electrolyte: measurements and calculations, 8:29717 (R:US)
LITHIUM CHLORIDES
Solvent Properties
Solubility of Li_2S in LiF-LiCl-LiBr electrolyte: measurements and calculations, 8:29717 (R:US)
LITHIUM DEUTERIDES
Deuteron Reactions
Study and use of the ion beams formed in the Focus experiment, 8:30933 (TG:US)
LITHIUM FLUORIDES
Progress in uv damage testing at Los Alamos (Laser damage test facility), 8:30102 (R:US)
Phase Diagrams
Computer analysis of phase diagrams and thermodynamic properties of cryolite based systems: 1. The AlF_3-LiF-NaF system, 8:30031 (J:US)
Solvent Properties
Solubility of Li_2S in LiF-LiCl-LiBr electrolyte: measurements and calculations, 8:29717 (R:US)
Thermodynamic Properties
Computer analysis of phase diagrams and thermodynamic properties of cryolite based systems: 1. The AlF_3-LiF-NaF system, 8:30031 (J:US)
X-Ray Diffraction
Reflection intensities of photons in the n-th diffraction order for crystal planes of quartz. LiF, Ge and Si, 8:29931 (R:SU:In Russian)
LITHIUM IONS
Energy-Level Transitions
Doubly excited states in some light atoms, 8:30649 (J:NL)
Ion Sources
Ion-source development at Argonne, 8:30633 (R:US)
LITHIUM OXIDES
Compatibility
Irradiation and compatibility testing of Li_2O materials at EBR-II, 8:30885 (R:US)
Crystal Structure
Neutron profile refinement of the structures of Li_2SnO_3 and Li_2ZrO_3, 8:30005 (J:US)
Electric Conductivity
Electronic conductivity of Li_2MnO_3 doped with aluminum, magnesium, or zinc, 8:29785 (R:US)
Stress Corrosion
Irradiation and compatibility testing of Li_2O materials at EBR-II, 8:30885 (R:US)
Structural Chemical Analysis
Neutron profile refinement of the structures of Li_2SnO_3 and Li_2ZrO_3, 8:30005 (J:US)
LITHIUM PERCHLORATES
Electric Conductivity
Electric field studies of the aggregation of electrolytes in low dielectric media. Final report, 8:30062 (R:US)
LITHIUM SULFIDES
Solubility
Solubility of Li_2S in LiF-LiCl-LiBr electrolyte: measurements and calculations, 8:29717 (R:US)
LITHIUM-SULFUR BATTERIES
Battery Separators
Manufacturing process for a high-temperature electrochemical element, 8:29719 (TG:US)
Design
Secondary batteries - new batteries: high temperature, 8:29724 (BA:US)

Electrodes
Manufacturing process for a high-temperature electrochemical element, 8:29719 (TG:US)
Electrolytes
Solubility of Li_2S in LiF-LiCl-LiBr electrolyte: measurements and calculations, 8:29717 (R:US)
Failure Mode Analysis
Post-test analysis of Gould and Eagle-Picher cells, 8:29714 (R:US)
Failures
Statistical analysis of lithium/iron sulfide status cell cycle life and failure mode, 8:29712 (R:US)
Performance
Engineering characteristics of secondary lithium/iron sulfide batteries, 8:29711 (R:US)
Secondary batteries - new batteries: high temperature, 8:29724 (BA:US)
Performance Testing
Argonne National Laboratory Li-alloy/FeS cell testing and R & D programs, 8:29716 (R:US)
Service Life
Statistical analysis of lithium/iron sulfide status cell cycle life and failure mode, 8:29712 (R:US)
Specifications
Design considerations for a Li-Al/FeS battery for an electric van, 8:29861 (R:US)

LIVER
Mixed-Function Oxidases
Cytochrome P-450 dependent monooxygenase activity in rat nasal epithelial membranes, 8:30571 (J:NL)

LMFBR TYPE REACTORS

Fuel-Coolant Interactions
Results of recent fuel-coolant interaction experiments with reactor materials, 8:29629 (R:US)
Heat Exchangers
Hydrodynamic prediction of multidimensional single- and two-phase flow in rod arrays. Progress report, May 15-December 31, 1982, 8:29585 (R:US)
Thermal-hydraulic posttest analysis for the ANL/MCTF 360° model heat-exchanger water test under mixed convection, 8:29632 (R:US)
Loss of Flow
Hydrodynamic and thermal modeling of solid particles in a multi-phase, multi-component flow, 8:29636 (R:US)
New aspects in the analysis of loss-of-flow transients for homogeneous and heterogeneous LMFBR cores, 8:29628 (R:US)
Meltdown
Status of core-debris coolability experiments with real and simulant materials at Argonne National Laboratory, 8:29630 (R:US)
Neutron Diffusion Equation
Applicability of three dimensional diffusion theory programmes based on coarse mesh methods to calculating nuclear characteristics of fast breeder reactors, 8:29587 (R:JP:In Japanese)
Pipes
Spring bypass assembly (LMFBR; Patent), 8:29590 (P:US)
Primary Coolant Circuits
Characterization of two-phase flow using neutronic fluctuations, 8:29691 (R:US)
Probabilistic assessment of critically flawed LMFBR PHTS piping elbows, 8:29627 (R:US)
Reactor Accidents
Aerosol release and transport program. Quarterly progress report, October-December 1982, 8:29688 (R:US)
Code portability and data management considerations in the SAS3D LMFBR accident-analysis code, 8:29626 (R:US)
Physics of reactor safety. Quarterly report, October-December 1982, 8:29687 (R:US)
Thermal-hydraulic posttest analysis for the ANL/MCTF 360° model heat-exchanger water test under mixed convection, 8:29632 (R:US)
Reactor Components
Method for reliability analysis of complex reactor systems, 8:29581 (R:US)
Reactor Cooling Systems
Effect of elbow translations on pressure transient analysis of piping systems, 8:29592 (J:US)
Reactor Core Disruption
Hydrodynamic and thermal modeling of solid particles in a multi-phase, multi-component flow, 8:29636 (R:US)
Status of core-debris coolability experiments with real and simulant materials at Argonne National Laboratory, 8:29630 (R:US)
Reactor Cores
DIF3D nodal neutronics option for two- and three-dimensional diffusion theory calculations in hexagonal geometry, 8:29574 (R:US)
Dynamic behavior of homogeneous and heterogeneous LMFBR core-design concepts, 8:29584 (R:US)
Irradiated materials measurement technology, 8:29914 (J:US)
Reactor Fueling
Vibrating fuel grapple (Patent), 8:29591 (P:US)
Reactor Kinetics
DIF3D nodal neutronics option for two- and three-dimensional diffusion theory calculations in hexagonal geometry, 8:29574 (R:US)
Reactor Materials
Finite-element treatment of concrete cracking and thermal structural analysis, 8:29583 (R:US)
Reactor Safety
Physics of reactor safety. Quarterly report, October-December 1982, 8:29687 (R:US)
Safety research programs sponsored by Office of Nuclear Regulatory Research. Quarterly progress report, July 1-September 30, 1982, 8:29684 (R:US)
Reactor Vessels
Finite-element treatment of concrete cracking and thermal structural analysis, 8:29583 (R:US)
RHR Systems
Passive heat-transfer means for nuclear reactors (Patent; LMFBR), 8:29589 (P:US)
SASSYS LMFBR systems analysis code, 8:29633 (R:US)
Specifications
Reactors and fuel production, 8:29537 (R:US)
Steam Generators
Contribution to perfecting eddy current testing of steam generator tubes of sodium cooled breeders: description of the Monacault loop for the study of sodium deposit influence, 8:29579 (R:FR:In French)

LOAD MANAGEMENT
Specifications
Particular characteristics of fast reactors: functional aspects and technological aspects, 8:29576 (R:FR:In French)

LOCA
See LOSS OF COOLANT

LOCAL GOVERNMENT
Federal Assistance Programs
Information and training program for state and regional SLAP organizations. Final report, February 1, 1981-January 31, 1983, 8:29768 (R:US)

LONGITUDINAL PINCH
One-Dimensional Calculations
Creation of high-temperature plasma through the use of a superfast Z-pinch, 8:30849 (R:US)

LONGWALL MINING
Automation
Technical advances in the mechanization and automation of face work in thin (less than 1.2 m), gently sloping (0.35 degrees) seams; choice of methods of working such seams according to geological, technical and economic conditions, 8:28889 (R:XU)
Dusts
Evaluate fundamental approaches to longwall dust control. Phase II report, 8:28887 (R:US)
Planning
Rock mechanics design criteria for longwall mining at Angus Place colliery, 8:28880 (R:AU)
LOS ALAMOS
Plants
Checklist of vascular plants of the Pajarito Plateau and adjacent Jemez Mountains, 8:30373 (RA:US)

LOSS OF COOLANT
Estimation of fuel temperature increase during coolant boiloff accident, 8:29677 (R:JP:In Japanese)
Gases
Non-condensible gas fraction predictions using wet and dry bulb temperature measurements (PWR), 8:29689 (R:US)
Heat Transfer
Analysis of LOFT experiments on RETRAN-01, 8:29646 (RA:US)
LOCA simulation in the National Research Universal reactor program: data report for the third materials experiment (MT-3) (PWR), 8:29685 (R:US)
Non-condensible gas fraction predictions using wet and dry bulb temperature measurements (PWR), 8:29689 (R:US)
RETRAN-02 comparison with Semiscale Test S-07-10B (PWR), 8:29645 (RA:US)
RETRAN analysis of PWR small break LOCA, 8:29655 (RA:US)
Some applications of the moving finite element method to fluid flow and related problems (PWR; BWR), 8:29641 (R:US)
Suppression pool temperature transient analysis with RETRAN-01 (BWR), 8:29665 (RA:US)
Thermal mixing in a model cold leg and downcomer at low flow rates (PWR), 8:29673 (R:US)
Two-phase-flow characteristics during reflooding of a hot vertical tube. Final report (PWR), 8:29672 (R:US)
Hydraulics
Analysis of LOFT experiments on RETRAN-01, 8:29646 (RA:US)
LOCA simulation in the National Research Universal reactor program: data report for the third materials experiment (MT-3) (PWR), 8:29685 (R:US)
RETRAN-02 comparison with Semiscale Test S-07-10B (PWR), 8:29645 (RA:US)
RETRAN analysis of PWR small break LOCA, 8:29655 (RA:US)
Some applications of the moving finite element method to fluid flow and related problems (PWR; BWR), 8:29641 (R:US)
Suppression pool temperature transient analysis with RETRAN-01 (BWR), 8:29665 (RA:US)
Thermal mixing in a model cold leg and downcomer at low flow rates (PWR), 8:29673 (R:US)
Two-phase-flow characteristics during reflooding of a hot vertical tube. Final report (PWR), 8:29672 (R:US)
Meltdown
Doses received while crossing a plume of radioactive material released during an accident at a nuclear power plant, 8:29695 (J:GB)
Risk Assessment
Probabilistic assessment of the primary coolant loop pipe fracture due to fatigue crack growth for a PWR plant, 8:29697 (J:NL)
Simulation
Comparison of thermal behavior of different PWR fuel rod simulators for LOCA experiments, 8:29678 (R:DE)
Multi-rod burst test under a loss-of-coolant accident condition, (2). Experimental result of the bundle No.7806, 8:29675 (R:JP:In Japanese)
Test Facilities
Development of a generalized correlation for phase-velocity measurements obtained from impedance-probe pairs in two-phase flow systems (PWR), 8:29634 (R:US)
LOCA simulation in the National Research Universal reactor program: data report for the third materials experiment (MT-3) (PWR), 8:29685 (R:US)
LOSS OF FLOW
Heat Transfer
Hydrodynamic and thermal modeling of solid particles in a multi-phase, multi-component flow (LMFBR), 8:29636 (R:US)
New aspects in the analysis of loss-of-flow transients for homogeneous and heterogeneous LMFBR cores, 8:29628 (R:US)
Hydraulics
Hydrodynamic and thermal modeling of solid particles in a multi-phase, multi-component flow (LMFBR), 8:29636 (R:US)
New aspects in the analysis of loss-of-flow transients for homogeneous and heterogeneous LMFBR cores, 8:29628 (R:US)
LOUISIANA
Oil Fields
Design and implementation of four enhanced recovery projects in bay fields of south Louisiana, 8:29014 (J:US)
Study of Getty Oil Co.'s successful in-situ combustion project in the Bellevue Field, 8:29023 (J:US)
Weeks Island S Sand Reservoir B gravity stable miscible CO_2 displacement, Iberia Parish, Louisiana, 8:29012 (J:US)
Radioactive Waste Disposal
Environmental characterization report for the Gulf Interior Region Louisiana study area (Vacherie and Rayburn salt domes), 8:29250 (R:US)
LOW BTU GAS
150 to 250 Btu/ft³.
Combustion
Turbulent combustion experiments and modeling. Technical progress report, July 2, 1981-September 30, 1981, 8:30155 (R:US)
LOW-LEVEL RADIOACTIVE WASTES
Bibliographies
Low-level radioactive waste, 8:29125 (R:US)
Classification
10 CFR 61 waste form requirements, 8:29213 (BA:US)
Light-water reactors low-level waste forms, 8:29143 (RA:US)
Low- and intermediate-level waste management practices in Belgium, 8:29183 (BA:US)
Inventories
State-of-the-art review on the management of low-level radioactive and transuranic wastes, 8:29201 (BA:US)
Land Transport
EPICOR II Research and Disposition Program: FY-1982 annual report (Idaho National Engineering Laboratory), 8:29558 (R:US)
Materials Handling
EPICOR II Research and Disposition Program: FY-1982 annual report (Idaho National Engineering Laboratory), 8:29558 (R:US)
Meetings
Symposium on low-level waste disposal: facility design, construction, and operating practices, 8:29135 (R:US)
Regulations
10 CFR 61 waste form requirements, 8:29213 (BA:US)
LP-GAS
See LIQUEFIED PETROLEUM GASES
LUBRICATING OILS
Mutagen Screening
Light activation of natural and synthetic petroleums, 8:28982 (RA:US)

LUCIE-2 REACTOR
Reactor Licensing
Safety evaluation report related to the operation of St. Lucie Plant, Unit No. 2. Docket No. 50-389, 8:29597 (R:US)
Reactor Safety
Safety evaluation report related to the operation of St. Lucie Plant, Unit No. 2. Docket No. 50-389, 8:29597 (R:US)
LUMBER INDUSTRY
See WOOD PRODUCTS INDUSTRY
LUNG CLEARANCE
Biological Models
Modifications to the ICRP model for inhaled plutonium oxide based on the observed lung clearance and urinary excretion, 8:30510 (RA:US)
LUNGS
Biological Models
Estimation of the bronchial cancer risk from the inhalation of long-lived alpha emitting radionuclides, 8:30516 (RA:US)
Biological Radiation Effects
Dosimetry and response in rat pulmonary epithelium following inhalation of $^{239}PuO_2$, 8:30502 (RA:US)
Microdosimetry of alpha-irradiated lung, 8:30507 (RA:US)
Relevance of animal models for radionuclide inhalation in man, 8:30508 (RA:US)
Search of the relevant lung dose, 8:30499 (RA:US)
Delayed Radiation Effects
Effects of repeated inhalation exposure of rats to aerosols of $^{144}CeO_2$: a preliminary report, 8:30506 (RA:US)
Dynamic Function Studies
Effect of age on respiratory function of Fischer-344 rats, 8:30458 (J:US)
Immune Reactions
Recruitment of antibody-forming cells in the lung after local immunization is nonspecific, 8:30460 (J:US)
Meetings
Current concepts in lung dosimetry. Proceedings of a special workshop (Lead abstract), 8:30496 (R:US)
Metabolism
Use of radioisotopes in quantitative studies of lung metabolism, 8:30442 (J:US)
Mixed-Function Oxidases
Cytochrome P-450 dependent monooxygenase activity in rat nasal epithelial membranes, 8:30571 (J:NL)
Proceedings
Current concepts in lung dosimetry. Proceedings of a special workshop (Lead abstract), 8:30496 (R:US)
Radiation Dose Distributions
Relevance of animal models for radionuclide inhalation in man, 8:30508 (RA:US)
Radiation Doses
Current concepts in lung dosimetry. Proceedings of a special workshop (Lead abstract), 8:30496 (R:US)
Dosimetric concepts for inhaled radon decay products in the human lung, 8:30500 (RA:US)
Dosimetry of internally deposited radionuclides in lung and its usefulness in predicting biological effects, 8:30498 (RA:US)
Lung dose and lung cancer risk by inhalation of radon daughters, 8:30497 (RA:US)
Properties of radon progeny aerosols in mainstream cigarette smoke and the alpha dose at segmental bifurcations of smokers, 8:30513 (RA:US)
Theory of age dependence in the incidence of lung carcinomas following inhalation of a radioactive atmosphere, 8:30517 (RA:US)
Radionuclide Kinetics
Modifications to the ICRP model for inhaled plutonium oxide based on the observed lung clearance and urinary excretion, 8:30510 (RA:US)
Retention of relatively insoluble particles inhaled by dogs, rats and mice, 8:30504 (RA:US)
Sensitivity
Effects of prolonged inhalation exposure to oil shale dust, 8:30553 (RA:US)
Inhalation studies, 8:30535 (RA:US)
Spatial Dose Distributions
Dosimetry of internally deposited radionuclides in lung and its usefulness in predicting biological effects, 8:30498 (RA:US)
LWBR TYPE REACTORS
Reactor Cores
Shippingport Atomic Power Station. Technical progress report, July 26, 1982-January 25, 1983, 8:29566 (R:US)
LWR TYPE REACTORS
See WATER COOLED REACTORS
LYMPHOCYTES
Biological Radiation Effects
Chromosome aberrations in peripheral blood lymphocytes after controlled partial gamma-ray exposure in rabbits, 8:30480 (RA:DE)
Kinetics
Flow-cytometric analysis of human lymphocyte spheroids, 8:30427 (RA:US)
Radiosensitivity
Analysis of dose-response relations after X-irradiation of different human lymphocyte fractions, 8:30479 (RA:DE)
Sister Chromatid Exchanges
Sister chromatid exchange rates in geokinetics oil shale workers, 8:30551 (RA:US)
Sister chromatid exchange rates in Geokinetics oil shale workers, 8:29078 (RA:US)
LYMPHOID CELLS
See LYMPHOCYTES
LYSOSOMES
Quantitative Chemical Analysis
Effects of copper on the latency of lysosomal hexosaminidase in the digestive cells of Mytilus edulis, 8:30576 (J:DE)

Environmental degradation of engineering materials in hydrogen, 8:29865 (R:US)
Stresses
Cyclic inelastic deformation aspects of fatigue-crack-growth analysis, 8:29923 (J:US)
Surface Properties
Spatial dispersion effects in the interaction between metal surfaces, 8:30813 (J:GB)
METAMORPHIC ROCKS
Heat Transfer
Programme of research into the management and storage of radioactive waste. Thermal phenomena in crystalline rock, 8:29122 (R:GB)
Permeability
Programme of research into the management and storage of radioactive waste. Thermal phenomena in crystalline rock, 8:29122 (R:GB)
METAPHASE
See MITOSIS
METEOROLOGY
Measuring Instruments
Kolmogoroff constants at the 1976 ITCE, 8:30326 (J:NL)
METHANATION
Catalysts
Metallocarboranes structurally engineered for the reduction of carbon monoxide, 8:28792 (R:US)
Promoter modifications of catalytic activity and selectivity. Progress report, April 1, 1982-March 31, 1983, 8:29288 (R:US)
METHANE
Adsorption Isotherms
Low-energy process for separating hydrogen and methane in advanced coal-gasification processes. Final report, September 8, 1980-January 7, 1983, 8:28801 (R:US)
Biosynthesis
Rapid methane generation from solid waste. Final project report, 8:29309 (R:US)
Chemical Reaction Yield
Promoter modifications of catalytic activity and selectivity. Progress report, April 1, 1982-March 31, 1983, 8:29288 (R:US)
Compressibility
Methane modeling: predicting the inflow of methane gas into coal mines. Quarterly technical progress report, October 1, 1982-December 31, 1982, 8:28888 (R:US)
Electronic Structure
Electronic structure of Rydberg states of H_3, NeH, H_2F, H_3O, NH_4, and CH_5 molecules, 8:30012 (J:US)
Emission
Methane modeling: predicting the inflow of methane gas into coal mines. Quarterly technical progress report, October 1, 1982-December 31, 1982, 8:28888 (R:US)
Marketing
Feasibility of methane-gas recovery at the St. John's Landfill, 8:29852 (R:US)
Measuring Instruments
Methane modeling: predicting the inflow of methane gas into coal mines. Quarterly technical progress report, October 1, 1982-December 31, 1982, 8:28888 (R:US)
Monitoring
Methane modeling: predicting the inflow of methane gas into coal mines. Quarterly technical progress report, October 1, 1982-December 31, 1982, 8:28888 (R:US)
Production
A.S.E.F. solid waste to methane gas, Pompano Beach, Florida. RefCOM: technical status report, February 1 to April 2, 1983, 8:29840 (R:US)

Purification
Process for separating coal synthesized methane from unreacted intermediate and contaminant gases (Patent), 8:28817 (P:US)
Recovery
Feasibility of methane-gas recovery at the St. John's Landfill, 8:29852 (R:US)
Utilization of landfill gas for a vehicle fuel system: Rossman's Landfill, Clackamas County, Oregon. Feasibility study, 8:29851 (R:US)
Separation Processes
Low-energy process for separating hydrogen and methane in advanced coal-gasification processes. Final report, September 8, 1980-January 7, 1983, 8:28801 (R:US)
Sorption
Reservoir engineering aspects and resource-assessment methodology of eastern Devonian Gas shales, 8:29061 (R:US)
Thermodynamic Properties
Correlations for estimating critical constants, acentric factor, structure factor, and dipole moment for undefined fractions, 8:28831 (RA:US)
Viscosity
Methane modeling: predicting the inflow of methane gas into coal mines. Quarterly technical progress report, October 1, 1982-December 31, 1982, 8:28888 (R:US)

METHANOGENIC BACTERIA
Physiology
Physiology of thermophilic bacteria, 8:30451 (B:US)

METHANOL
Conversion
A general homogeneous catalytic method for the homologation of methanol to ethanol, 8:29291 (J:US)
Market
Methacoal fuels, or coal-alcohol slurry fuels, an entree for methanol to world markets, 8:28977 (RA:US)
Performance Testing
California Energy Commission policy affiliation, 8:29767 (RA:US)
Rheology
Methacoal fuels, or coal-alcohol slurry fuels, an entree for methanol to world markets, 8:28977 (RA:US)
Synthesis
Methacoal fuels, or coal-alcohol slurry fuels, an entree for methanol to world markets, 8:28977 (RA:US)
Thermal Conductivity
Thermal conductivity measurements and molecular association in a series of alcohol vapors: methanol, ethanol, isopropanol, and t-butanol (Temperature and pressure dependence), 8:29292 (J:US)
Thermodynamic Properties
Correlations for estimating critical constants, acentric factor, structure factor, and dipole moment for undefined fractions, 8:28831 (RA:US)
Thermodynamics
Thermal conductivity measurements and molecular association in a series of alcohol vapors: methanol, ethanol, isopropanol, and t-butanol (Temperature and pressure dependence), 8:29292 (J:US)

METHOXYBENZENE
See ANISOLE

METHYL ALCOHOL
See METHANOL

METHYL METHANESULFONATE
Toxicity
In vivo sister-chromatid exchange assay in the larvae of the mussel Mytilus edulis: response to 3 mutagens, 8:30573 (J:NL)

METHYL PHENOLS
See CRESOLS

METHYL PHENYL ETHER
See ANISOLE

METHYL VIOLOGEN
See BIPYRIDINES

METHYLBENZENE

METHANOL

MEXICO
Coordinated Research Programs
IIE geothermal research program: collaboration with EPRI, 8:29438 (RA:US)
Geothermal Energy
Perspectives on geothermal development in Mexico, 8:29431 (RA:US)
Geothermal Exploration
IIE geothermal research program: collaboration with EPRI, 8:29438 (RA:US)

MFTF DEVICES
Prior to October 1977, MX DEVICES was used to index this concept.
Cost
Electrical energy and cost for the Mirror Fusion Test Facility, 8:30926 (R:US)
Design
Options to upgrade the Mirror Fusion Test Facility, 8:30927 (R:US)
ECR Heating
Power deposition profiles in Maxwellian magneto-active plasmas, 8:30867 (R:US)
Neutron Spectra
Neutron diagnostics for magnetically confined plasmas, 8:30866 (RA:US)
Plasma Diagnostics
Neutron diagnostics for magnetically confined plasmas, 8:30866 (RA:US)
Power Generation
Electrical energy and cost for the Mirror Fusion Test Facility, 8:30926 (R:US)
Program Management
Mirror Fusion Test Facility Project, Lawrence Livermore National Laboratory, Livermore, California, 8:30895 (R:US)
Superconducting Magnets
Mirror fusion test facility: magnet cyrogenics, 8:30955 (J:US)

MHD CHANNELS
Boundary Layers
Three-dimensional MHD electrical boundary approximations and applications, 8:29778 (R:US)
Electric Currents
Three-dimensional MHD electrical boundary approximations and applications, 8:29778 (R:US)
Electric Potential
Three-dimensional MHD electrical boundary approximations and applications, 8:29778 (R:US)

MHD POWER PLANTS
Parametric Analysis
Parametric analysis of closed-cycle magnetohydrodynamic (MHD) power plants, 8:29780 (R:US)

MICE
Antigen-Antibody Reactions
Effects of 60-Hz electric fields on specific humoral and cellular components of the immune system, 8:30584 (J:US)
Immune Reactions
Infiltration of host defense cells into a foreign substratum, 8:30454 (RA:US)
Mutation Frequency
Relation of mouse specific-locus tests to other mutagenicity tests and to risk estimation, 8:30530 (R:US)
Sensitivity
Effects of solubility on tumorigenesis of two shale crude oils and two natural petroleums, 8:30533 (RA:US)

MICELLAR SYSTEMS
Phase Studies
Phases and interfacial tensions of aqueous/hydrocarbon systems containing low-equivalent-weight organic salts, 8:28996 (J:US)

MICELLAR-POLYMER FLOODING
See MICROEMULSION FLOODING

MICROCHANNEL ELECTRON MULTIPLIERS
Design
Development of high-speed microchannel photomultiplier, 8:30309 (R:US)
Performance Testing
Testing of gated microchannelplate (MCP) intensifiers at EG and G/LAO, 8:30305 (R:US)
MICRODOSIMETRY
Mathematical Models
Search of the relevant lung dose, 8:30499 (RA:US)
MICROEMULSION FLOODING
Bench-Scale Experiments
Interpretation of differential pressure in laboratory surfactant/polymer displacements, 8:29028 (J:US)
Multiple slug scaling of linear and pattern laboratory chemical floods, 8:29030 (J:US)
Efficiency
Effect of live crude on phase behavior and oil recovery efficiency of surfactant flooding systems, 8:29000 (J:US)
Phase Studies
Equilibrium of a microemulsion that coexists with oil or brine, 8:29040 (J:US)
Pressure Dependence
Interpretation of differential pressure in laboratory surfactant/polymer displacements, 8:29028 (J:US)
Radioactive Tracer Logging
Measuring well injection profiles of polymer-containing fluids, 8:29047 (J:US)
Water Requirements
Identification of water requirements for selected enhanced oil recovery methods, 8:28989 (R:US)
MICROEMULSIONS
Phase Studies
Critical scaling behavior of microemulsions, 8:29043 (J:US)
Interfacial light scattering study in microemulsions, 8:29044 (J:US)
Microemulsion phase behavior. Four-phase progressions in five-component mixtures, 8:28997 (J:US)
Thermodynamic Properties
Critical scaling behavior of microemulsions, 8:29043 (J:US)
MICRONESIA
Wind
Wind-energy assessment for the western Pacific based on ship reports, 8:29479 (R:US)
MICRO-SCALE HYDROELECTRIC POWER PLANTS
Construction

Design
Emitron: microwave diode, 8:30150 (P:US)
MIDDLE DISTILLATES
See PETROLEUM DISTILLATES
MIDLAND-1 REACTOR
Specifications
Current experience with central-station nuclear cogeneration plants, 8:29600 (R:US)
MIDLAND-2 REACTOR
Specifications
Current experience with central-station nuclear cogeneration plants, 8:29600 (R:US)
MIGRATION (RADIONUCLIDE)
See RADIONUCLIDE MIGRATION
MILL TAILINGS
Environmental Impacts
Environmental impact of uranium mining and milling: an American view, 8:30362 (R:US)
Erosion
Overland erosion of uranium-mill-tailings impoundments: physical processes and computational methods, 8:29247 (R:US)
Leachates
Laboratory measurements of contaminant attenuation of uranium mill tailings leachates by sediments and clay liners, 8:29249 (R:US)
Monitoring
Meteorological tower data: Grand Junction Tailings Site, Colorado. Final report, January-August 1982, 8:29253 (R:US)
Radiation Hazards
Environmental impact of uranium mining and milling: an American view, 8:30362 (R:US)
Radioactive Wastes
Management of the uranium mill tailings remedial action program, 8:29261 (R:US)
Stabilization
In-situ stabilization of a low-level radioactive site: a case history, 8:29219 (BA:US)
Influence of climatic parameters on movement of radionuclides in a multilayered saturated-unsaturated media, 8:30593 (RA:US)
MILLET
Hybridization
Apomictic interspecific hybrids between pearl millet and Pennisetum orientale L. C. Rich, 8:30436 (J:US)
Mutants
Stable cytoplasmic male-sterile mutants induced in Tift $23DB_1$ pearl millet with mitomycin and streptomycin, 8:30437 (J:US)
MINE ROADWAYS
Construction
Results of the first trial single entry development at Ellalong Colliery, 8:28881 (R:AU)

Strata Control
Ideal requirements of packs, 8:28897 (R:XE)
Supports
Development of new and improved types of roadway support, 8:28894 (R:XE)
MINE-MOUTH GENERATING PLANTS
See COAL MINES
FOSSIL-FUEL POWER PLANTS
MINERALIZATION
Radioinduction
Chronic radium intoxication: preliminary report of morphological and mineral changes in human bone, 8:30465 (RA:US)
MINERALS

Photoionization
Resonance ionization spectroscopy, 8:30072 (J:US)
MOLLUSCS
Sensitivity
In vivo sister-chromatid exchange assay in the larvae of the mussel Mytilus edulis: response to 3 mutagens, 8:30573 (J:NL)
MOLTEN CARBONATE FUEL CELLS
Prior to June 1980 this information was indexed with the descriptors HIGH-TEMPERATURE FUEL CELLS + MOLTEN SALTS + CARBONATES.

Cathodes
Development of cathode materials for the molten-carbonate fuel cell, 8:29784 (R:US)
Electrodes
AR and TD Fossil Energy Materials Program. Quarterly progress report for the period ending December 31, 1982, 8:28814 (R:US)
Electronic conductivity of Li_2MnO_3 doped with aluminum, magnesium, or zinc, 8:29785 (R:US)
Materials Testing
Development of cathode materials for the molten-carbonate fuel cell, 8:29784 (R:US)

MOLTEN SALT COOLANTS
See MOLTEN SALTS

MOLTEN SALTS
Corrosive Effects
AR and TD Fossil Energy Materials Program. Quarterly progress report for the period ending December 31, 1982, 8:28814 (R:US)
Dissolution
Coordination cluster theory of solutions, 8:30027 (BA:US)

MOLTING
Biological Pathways
Ecdysone metabolism in premolt land crabs (Gecarcinus lateralis), 8:30414 (J:US)

MOLYBDATES
Specific compounds should be indexed by coordination of a descriptor of the form (CATION) COMPOUNDS and the above anion descriptor.
Chemical Reactions
Characterization of molybdenum interfacial crud in a uranium mill that employs tertiary-amine solvent extraction, 8:29104 (R:US)

MOLYBDENUM
Ion Microscopy
Imaging metal surfaces by pulsed-laser-stimulated field desorption of field adsorbed atoms, 8:29921 (J:NL)
Lattice Vibrations
Vibrational frequencies via frozen phonons, 8:29982 (J:FR)
Neutron Reactions
Fast-neutron capture-cross-section measurements with the Argonne National Laboratory large-liquid-scintillator tank, 8:30752 (RA:US)
Redox Reactions
Investigation on the oxidation state and the behavior of molybdenum in silicate glass, 8:29972 (BA:US)
Surface Properties
Imaging metal surfaces by pulsed-laser-stimulated field desorption of field adsorbed atoms, 8:29921 (J:NL)
Valence
Investigation on the oxidation state and the behavior of molybdenum in silicate glass, 8:29972 (BA:US)

MOLYBDENUM 100 TARGET
Neutron Reactions
Neutron-capture-activation cross sections of ^{94,96}Zr and ^{98,100}Mo at thermal and 30 keV energy, 8:30751 (RA:US)

MOLYBDENUM 95
El-Transitions
El gamma strength from (γ,n) measurement in ^{96}Mo, 8:30747 (RA:US)

MOLYBDENUM 95 TARGET
Photonuclear Reactions
El gamma strength from (γ,n) measurement in ^{96}Mo, 8:30747 (RA:US)

MOLYBDENUM 98 TARGET
Neutron Reactions
Neutron-capture-activation cross sections of ^{94,96}Zr and ^{98,100}Mo at thermal and 30 keV energy, 8:30751 (RA:US)

MOLYBDENUM 99
Radioisotope Generators
Validation of the sterile manufacture of the AAEC MARK III molybdenum-99/techtnetium-99m generator, 8:30084 (R:AU)

MOLYBDENUM COMPLEXES
Physical Properties
Characterization of molybdenum interfacial crud in a uranium mill that employs tertiary-amine solvent extraction, 8:29104 (R:US)
Precipitation
Characterization of molybdenum interfacial crud in a uranium mill that employs tertiary-amine solvent extraction, 8:29104 (R:US)
Structural Chemical Analysis
Characterization of molybdenum interfacial crud in a uranium mill that employs tertiary-amine solvent extraction, 8:29104 (R:US)
New EXAFS models for the iron sites of the iron molybdenum cofactor of nitrogenase: the $[(p\text{-}CH_3C_6H_4S)_2FeS_2FeS_2MoS_2]^{3-}$ trianion and the $[C_6H_5O)_2FeS_2MoS_2]^{2-}$ dianion, 8:30006 (J:US)

MOLYBDENUM COMPOUNDS
See also MOLYBDATES
Chemical Bonds
Infrared intensity and the CO-metal bond, 8:30018 (J:NL)

MONAZITES
Isotope Ratio
Isotopic fractionation of thorium and uranium upon leaching of monozite: alpha-recoil damage effects, 8:29977 (BA:US)
Leaching
Isotopic fractionation of thorium and uranium upon leaching of monozite: alpha-recoil damage effects, 8:29977 (BA:US)
Radiation Effects
Isotopic fractionation of thorium and uranium upon leaching of monozite: alpha-recoil damage effects, 8:29977 (BA:US)

MONITORS (AIR POLLUTION)

MONITORS (FAILED ELEMENTS)
See FAILED ELEMENT MONITORS

MONITORS (REACTOR)
See REACTOR CONTROL SYSTEMS

MONOCHROMATORS
Design
Diffraction crystals for sagittally focusing x-rays, 8:30797 (P:US)

MONOCYTES
Cell Differentiation
Differentiation of mononuclear phagocytes, 8:30422 (RA:US)
Cell Flow Systems
Flow-cytometric analysis of cultured bone marrow mononuclear phagocytes, 8:30426 (RA:US)
Cell Proliferation
Flow-cytometric analysis of cultured bone marrow mononuclear phagocytes, 8:30426 (RA:US)
Proliferation kinetics of mononuclear phagocytes of the bone marrow, 8:30423 (RA:US)
Kinetics
Flow-cytometric analysis of human lymphocyte spheroids, 8:30427 (RA:US)

MOORINGS
Cables
Suppression of mooring cable strumming, 8:29367 (RA:US)
Life-Cycle Cost
OTEC mooring system development: recent accomplishments, 8:29365 (RA:US)

MORPHOLOGICAL CHANGES
Radioinduction
Chronic radium intoxication: preliminary report of morphological and mineral changes in human bone, 8:30465 (RA:US)

MORTARS
Compression Strength
Comparative studies of the effects of lignitic and bituminous flyashes in hydrated cement systems, 8:28845 (RA:US)
Effects of grinding on properties of fly ash cements, 8:28860 (RA:US)
Properties of mortars and concrete made with fly ash, 8:28855 (RA:US)
Curing
Comparative studies of the effects of lignitic and bituminous flyashes in hydrated cement systems, 8:28845 (RA:US)
Elasticity
Properties of mortars and concrete made with fly ash, 8:28855 (RA:US)

Flexural Strength
Properties of mortars and concrete made with fly ash, 8:28855 (RA:US)
Shrinkage
Properties of mortars and concrete made with fly ash, 8:28855 (RA:US)
Waste Product Utilization
Effects of grinding on properties of fly ash cements, 8:28860 (RA:US)
Wear Resistance
Properties of mortars and concrete made with fly ash, 8:28855 (RA:US)

MOULTING
See MOLTING

MULE DEER
See DEER

MULTI-PHOTON PROCESSES
Dissociation
Many-body processes in atomic and molecular physics. Progress report, September 1, 1982-August 31, 1983, 8:30636 (R:US)
Floquet Function
Many-body processes in atomic and molecular physics. Progress report, September 1, 1982-August 31, 1983, 8:30636 (R:US)

MULTIPLEXERS
Gating Circuits
8-input doublet analogue multiplexer, 8:30307 (R:SU:In Russian)

MULTIPOLAR CONFIGURATIONS
Magnetic Field Configurations
Closed expressions for the magnetic field of toroidal multipole configurations, 8:30924 (R:US)

MULTIWIRE DRIFT CHAMBERS
See DRIFT CHAMBERS

MULTIWIRE PROPORTIONAL CHAMBERS
See also DRIFT CHAMBERS
Gain
Investigation of gas gain in a proportional chamber, 8:30287 (R:SU:In Russian)

MUNICIPAL BUILDINGS
See PUBLIC BUILDINGS

MUNICIPAL WASTES
Anaerobic Digestion
A.S.E.F. solid waste to methane gas, Pompano Beach, Florida. RefCOM: technical status report, February 1 to April 2, 1983, 8:29840 (R:US)
Rapid methane generation from solid waste. Final project report, 8:29309 (R:US)
Power Generation
Megawatts from municipal waste, 8:29856 (J:US)

MUON NEUTRINOS
Leptonic Decay
Search for neutrino oscillations at Fermilab, 8:30676 (BA:US)

MUONIC MOLECULES
Energy Levels
Solution of high order of accuracy of the Sturm-Liouville partial problem for a system of differential equations of a special type, 8:30819 (R:SU:In Russian)

MUONIUM
Diffusion
Muonium in ultra-pure germanium, 8:30792 (J:US)
Hyperfine Structure
Self-consistent field investigation of location and hyperfine interaction of muonium in diamond, 8:29965 (J:US)
Temperature dependence of the anomalous muonium hyperfine interaction and depolarization rate in silicon, 8:30654 (J:US)
Temperature dependence of the hyperfine parameters of anomalous muonium in germanium, 8:29960 (J:US)

MUONS
See also MUONS PLUS
Magnetic Resonance
Muon spin rotation in antiferromagnetic oxides, 8:29964 (J:US)
Muon spin rotation study on magnetite, 8:29932 (J:US)
Particle Models
Spin, masses and anomalous magnetic moments of charged leptons (the ring model), 8:30693 (R:SU:In Russian)
Relaxation
Characteristics of muon states in silicon, 8:29963 (J:US)

MUONS PLUS
Diffusion
Calculation of the diffusion constant of muons in metals at low temperatures, 8:30791 (J:US)
Extracting maximal information on positive muon diffusion in metals, 8:30793 (J:US)
Theory of muon spin relaxation due to the hopping motion of positive muons in ferromagnets, 8:30794 (J:US)
Trapping
Diffusion and trapping of positive muons in niobium, 8:30795 (J:US)
Low-temperature mobility of positive muons in pure copper, 8:30796 (J:US)

MUSCLES
Physiology
Free radicals and tissue damage produced by exercise, 8:30408 (J:US)

MUSCULAR TISSUE
See MUSCLES

MUSEUMS

NAPHTHALENE
Thermodynamic Properties
Correlations for estimating critical constants, acentric factor, structure factor, and dipole moment for undefined fractions, 8:28831 (RA:US)
NAPHTHENES
See CYCLOALKANES
NATIONAL ACCELERATOR LABORATORY
See FERMILAB ACCELERATOR
NATIONAL GOVERNMENT
Use only when needed in conjunction with one or both of the terms LOCAL GOVERNMENT and STATE GOVERNMENT.
Research Programs
Federal funds for research and development, Fiscal years 1979, 1980, and 1981. Volume XXIX. Detailed statistical tables, 8:29758 (R:US)
NATIONAL SYNCHROTRON LIGHT SOURCE
See NSLS
NATURAL GAS
Fuel Consumption
Natural gas monthly, 8:29774 (R:US)
Prices
Cost and quality of fuels for electric utility plants (December 1982), 8:29496 (R:US)
Production
Natural gas monthly, 8:29774 (R:US)
Recommendations
Deep-coal-bed methane potential of the San Juan River coal region, southwestern Colorado, 8:28879 (R:US)
Reserves
Deep-coal-bed methane potential of the San Juan River coal region, southwestern Colorado, 8:28879 (R:US)
Resource Conservation
New concepts reduce process energy, 8:29831 (J:US)
NATURAL GAS APPLIANCES
See GAS APPLIANCES
NATURAL GAS DEPOSITS
Directional Drilling
Drilling of a deviated well: E.C. Newell 10056-D Meigs County, Ohio, 8:29063 (R:US)
Exploration
Deep-coal-bed methane potential of the San Juan River coal region, southwestern Colorado, 8:28879 (R:US)
Method to identify zones of intense jointing with application to the Parsons Lineament, West Virginia, 8:29059 (R:US)
Shallow seismic investigations of Devonian-shale gas production, 8:29062 (R:US)
Study of hydrogeologic trends in exploration for Devonian-shale gas in the Midway-Extra gas field of Putnam County, West virginia, 8:29058 (R:US)
Fractures
Method to identify zones of intense jointing with application to the Parsons Lineament, West Virginia, 8:29059 (R:US)
Shallow seismic investigations of Devonian-shale gas production, 8:29062 (R:US)
Geology
Study of hydrogeologic trends in exploration for Devonian-shale gas in the Midway-Extra gas field of Putnam County, West virginia, 8:29058 (R:US)
Hydrology
Study of hydrogeologic trends in exploration for Devonian-shale gas in the Midway-Extra gas field of Putnam County, West virginia, 8:29058 (R:US)
Land Leasing
Final Environmental Impact Statement on oil and gas leasing in the National Petroleum Reserve in Alaska, 8:30398 (R:US)
Resource Assessment
Reservoir engineering aspects and resource-assessment methodology of eastern Devonian Gas shales, 8:29061 (R:US)
Seismic Surveys
Shallow seismic investigations of Devonian-shale gas production, 8:29062 (R:US)
NATURAL GAS INDUSTRY
Productivity
Estimating the short-term producibility of oil and gas, 8:29763 (R:US)
NATURAL GAS WELLS
Production
Reservoir engineering aspects and resource-assessment methodology of eastern Devonian Gas shales, 8:29061 (R:US)

NEOCLASSICAL TRANSPORT THEORY
Hamiltonians
Collisional diffusion in a torus with imperfect magnetic surfaces, 8:30862 (R:US)
NEODYMIUM
Isotope Ratio
Determination of rare-earth isotope ratios by resonance ionization mass spectrometry, 8:29992 (J:NL)
Mass Spectroscopy
Determination of rare-earth isotope ratios by resonance ionization mass spectrometry, 8:29992 (J:NL)
NEODYMIUM 143 TARGET
Neutron Reactions
Status of recent fast capture cross section evaluations for important fission product nuclides, 8:30756 (RA:US)
NEODYMIUM 146
Energy Levels
IBA calculations near the Z=64 subshell, 8:30761 (J:NL)
NEODYMIUM CHLORIDES
Hydration
Direct determination of ionic solvation from neutron diffraction, 8:30009 (J:US)
NEODYMIUM PHOSPHATES
Chemical Preparation
Preparation of metal phosphates by a reaction using boron phosphate, 8:30017 (P:US)
NEON HYDRIDES
Electronic Structure
Electronic structure of Rydberg states of H_3, NeH, H_3F, H_3O, NH_4, and CH_5 molecules, 8:30012 (J:US)
NEOPENTANE
See 2-2-DIMETHYLPROPANE
NEOPLASMS
See also CARCINOMAS
LEUKEMIA
Epidemiology
Epidemiologic approach to determining the REM dose to bronchial epithelium from radon daughter exposures in man, 8:30514 (RA:US)
Impact of energy and industrial pollution on public health, 8:29749 (R:US)
Radioinduction
Biophysical aspects of radiation carcinogenesis, 8:30527 (BA:US)
Dosimetric concepts for inhaled radon decay products in the human lung, 8:30500 (RA:US)
Dosimetry of internally deposited radionuclides in lung and its usefulness in predicting biological effects, 8:30498 (RA:US)

Dosimetry and response in rat pulmonary epithelium following inhalation of $^{239}PuO_2$, 8:30502 (RA:US)
Effects of repeated inhalation exposure of rats to aerosols of $^{144}CeO_2$: a preliminary report, 8:30506 (RA:US)
Human health effects of radium: an epidemiologic perspective of research at Argonne National Laboratory, 8:30464 (RA:US)
Lung dose and lung cancer risk by inhalation of radon daughters, 8:30497 (RA:US)
Radiotherapy
Decreased incidences of neoplastic transformation in vitro following irradiation with multiple fractions of ^{60}Co γ-rays. Abstract no. 48, 8:30446 (J:NL)

NEPTUNIUM
Intestinal Absorption
Gastrointestinal absorption and retention of neptunium by fasted and fed mice, 8:30469 (RA:US)
Leaching
Leaching of actinides from simulated nuclear waste glass, 8:29229 (BA:US)

NEPTUNIUM 237 TARGET
Neutron Reactions
Some aspects of the evaluation of ^{237}Np, ^{239}Pu and ^{241}Am capture cross-sections in the unresolved region, 8:30773 (RA:US)

NEPTUNIUM PHOSPHATES
Chemical Preparation
Preparation of metal phosphates by a reaction using boron phosphate, 8:30017 (P:US)

NEPTUNIUM SULFATES
Chemical Preparation
The synthesis and characterization of neptunium hydroxysulfate, $Np(OH)_2SO_4$, 8:30090 (J:US)

NEPTUNYL COMPOUNDS
Diffusion
Diffusion of neptunyl(V) and pertechnetate ions in marine sediments, 8:29123 (R:US)

NETWORKS (COMPUTER)
See COMPUTER NETWORKS

NEUROSPORA
DNA
Homologies of Neurospora homothallic species using repeated and nonrepeated DNA sequences, 8:30450 (J:CH)
Hybridization
Homologies of Neurospora homothallic species using repeated and nonrepeated DNA sequences, 8:30450 (J:CH)

NEUTRAL ATOM BEAM INJECTION
Neutral-beam injector research and development at ORNL and LBL/LLL in the USA, 8:30969 (BA:XA)
Energy Losses
Theory of mode-induced beam-particle loss in tokamaks, 8:30864 (R:US)
Impurities
Effects of neutral-beam co- and counter-injection on impurity radiation from ISX-B plasmas, 8:30935 (J:AT)
Mathematical Models
Neutral beam heating in stellarators: a numerical approach, 8:30859 (R:US)

NEUTRAL BEAM SOURCES
Research Programs
Neutral-beam injector research and development at ORNL and LBL/LLL in the USA, 8:30969 (BA:XA)

NEUTRALIZATION (CHEMICAL)
See PH VALUE

NEUTRETTOS
See MUON NEUTRINOS

NEUTRINO DETECTION
Search for neutrino oscillations at Fermilab, 8:30676 (BA:US)
Underground neutrino astronomy, 8:30607 (R:US)
Shielding
Neutron and gamma-ray shielding requirements for a below-ground neutrino detector system at the Rutherford Laboratory Spallation Neutron Source, 8:30293 (R:US)

NEUTRINO-NEUTRON INTERACTIONS
Charged-Current Interactions
Study of diquark fragmentation into Λ and Y^{0+} nu n and nu p interactions, 8:30669 (R:US)

NEUTRINO-NUCLEON INTERACTIONS
See also NEUTRINO-NEUTRON INTERACTIONS
NEUTRINO-PROTON INTERACTIONS
Neutrino properties and interactions (1977-1980). Multileptonic events, 8:30670 (R:SU:In Russian)

NEUTRINO-PROTON INTERACTIONS
Charged-Current Interactions
Study of diquark fragmentation into Λ and Y^{0+} nu n and nu p interactions, 8:30669 (R:US)

NEUTRINOS
See also MUON NEUTRINOS
Astronomy
Underground neutrino astronomy, 8:30607 (R:US)

NEUTRON ACTIVATION ANALYSIS
See NEUTRON REACTIONS

NEUTRON ACTIVATION ANALYZERS
Irradiation Devices
Apparatus for irradiating a continuously flowing stream of fluid, 8:29993 (P:US)

NEUTRON CAPTURE
See NEUTRON REACTIONS

NEUTRON CHOPPERS
Crystals
Rotating crystal pulse shaper for use on a pulsed neutron source, 8:29269 (RA:US)

NEUTRON DETECTORS
See also FISSION CHAMBERS
Fiber Optics
Linear position sensitive neutron detector using fiber optic encoded scintillators, 8:30268 (RA:US)
Position Sensitive Detectors
Linear position sensitive neutron detector using fiber optic encoded scintillators, 8:30268 (RA:US)

NEUTRON DIFFRACTION
Status and neutron scattering experiments at KENS, 8:30198 (RA:US)

NEUTRON DIFFRACTOMETERS
Time-of-Flight Method
IPNS time-of-flight single crystal diffractometer, 8:30265 (RA:US)

NEUTRON DIFFUSION EQUATION
Computer Calculations
Applicability of three dimensional diffusion theory programmes based on coarse mesh methods to calculating nuclear characteristics of fast breeder reactors, 8:29587 (R:JP:In Japanese)

NEUTRON DOSIMETRY
Evaluation of personnel neutron dosimetry at operating nuclear power plants, 8:29565 (R:US)
Dose Equivalents
Determination of maximum neutron dose equivalent in the 10^{-8}-25 MeV energy range using thermal neutron detector with two moderators, 8:30806 (R:SU:In Russian)
Moderating Detectors
Determination of maximum neutron dose equivalent in the 10^{-8}-25 MeV energy range using thermal neutron detector with two moderators, 8:30806 (R:SU:In Russian)

NEUTRON LOGGING
Pulsed Neutron Techniques
Three-phase quantitative monitoring method for CO_2 floods, 8:29004 (J:US)

NEUTRON REACTIONS
Capture
Absolute measurements of the fast neutron capture cross section of ^{115}In, 8:30749 (RA:US)
Absolute measurement of the cross section for 23-keV neutron activation of thorium, 8:30769 (RA:US)
Absorption and activation techniques in measurements of fast-neutron capture cross sections, 8:30732 (RA:US)
Average capture cross section of the fission product nuclei ^{105}Pd and ^{108}Pd, 8:30755 (RA:US)
Calculation of average capture cross sections for actinides: level-statistical vs global approach, 8:30766 (RA:US)
Differential fission product capture cross section measurements since Bologna, 8:30754 (RA:US)

Evaluation of the radiation width of the 27.7 keV resonance in ^{56}Fe, 8:30742 (RA:US)
Fast-neutron capture cross sections, 8:30746 (R:US)
Fast neutron capture cross section measurement with pulse-height weighting technique, 8:30734 (RA:US)
Fast-neutron capture in ^{238}U and ^{232}Th, 8:30768 (RA:US)
Fast-neutron capture in fissile and fertile nuclides, 8:30774 (RA:US)
Fast-neutron capture in structural materials, 8:30743 (RA:US)
Fast-neutron capture cross sections for the most important fission-product nuclei, 8:30757 (RA:US)
Gamma-rays from radiative capture reactions in ^{133}Cs, ^{181}Ta and ^{197}Au, 8:30753 (RA:US)
Gold standard capture cross section from 100 keV to 15 MeV, 8:30764 (RA:US)
Measurements and model calculations of the ^{110}Cd(n,γ)/sup 111m/Cd cross section, 8:30750 (RA:US)
Measurement of neutron capture cross section and alpha of ^{235}U from 2 to 85 keV, 8:30772 (RA:US)
Neutron-capture-activation cross sections of ^{94} ^{96}Zr and ^{98} ^{100}Mo at thermal and 30 keV energy, 8:30751 (RA:US)
Neutron capture widths of s-wave resonances in ^{56}Fe, ^{58} ^{60}Ni and ^{27}Al, 8:30741 (RA:US)
Neutron spectroscopy. Final report, 8:30775 (R:US)
Prompt gamma-ray detectors for the measurement of neutron capture cross-sections, 8:30733 (RA:US)
Some aspects of the evaluation of ^{237}Np, ^{238}Pu and ^{241}Am capture cross-sections in the unresolved region, 8:30773 (RA:US)
Some summary reflections, 8:30758 (RA:US)
Status of neutron capture data of ^{233}U, ^{235}U and ^{239}Pu in the unresolved resonance region, 8:30770 (RA:US)
Status of structural material data in the resolved resonance region, 8:30740 (RA:US)
Status of recent fast capture cross section evaluations for important fission product nuclides, 8:30756 (RA:US)
Total γ-ray spectra and isomeric ratio calculations in fast neutron radiative capture, 8:30748 (RA:US)
Use of ABAREX for neutron capture calculations, 8:30767 (RA:US)

Capture-to-Fission Ratio
Measurement of neutron capture cross section and alpha of ^{235}U from 2 to 85 keV, 8:30772 (RA:US)

Cross Sections
Fast neutron capture in actinide isotopes: recent results from Karlsruhe, 8:30771 (RA:US)

Energy Absorption
Monte Carlo study of the energy deposition of a flux of spallation neutrons in various samples, 8:29281 (RA:US)

Fast Neutrons
Fast-neutron capture-cross-section measurements with the Argonne National Laboratory large-liquid-scintillator tank, 8:30752 (RA:US)

Fission
Measurements of the spallation and fission product production for depleted uranium and natural lead targets bombarded by 1100 MeV protons, 8:29278 (RA:US)
Neutron spectroscopy. Final report, 8:30775 (R:US)

Incoherent Scattering
Crystal analyzer TOF spectrometer (CAT) for high energy incoherent neutron scattering, 8:30786 (RA:US)

Meetings
Fast-neutron capture cross sections, 8:30746 (R:US)

Spallation
Measurements of the spallation and fission product production for depleted uranium and natural lead targets bombarded by 1100 MeV protons, 8:29278 (RA:US)

Standards
Gold standard capture cross section from 100 keV to 15 MeV, 8:30764 (RA:US)

NEUTRON SOURCE FACILITIES
See also IPNS-I SYNCHROTRON
Tandem mirrors for neutron production, 8:30931 (R:US)

Construction
Progress on the construction of the spallation neutron source at the Rutherford Appleton Laboratory, 8:30197 (RA:US)

Feasibility Studies
Status of the SNQ project at KFA Juelich, 8:30199 (RA:US)

NEUTRON SOURCES
Excludes reactors even when used as neutron sources.

Accelerator Facilities
Progress on the SNS target station, 8:29270 (RA:US)

Computerized Simulation
Monte Carlo study of the energy deposition of a flux of spallation neutrons in various samples, 8:29281 (RA:US)

Data Acquisition Systems
IPNS data acquisition system, 8:30202 (RA:US)

Design
D-T neutron generator development for cancer therapy: 1982 annual progress report, 8:30241 (R:US)

Deuteron Beams
How much thermal neutron flux is gained using deuterons instead of protons, 8:29280 (RA:US)

Fission
Measured and calculated neutron yields for 100 MeV protons on thick targets of Pb and Li, 8:29279 (RA:US)
Measurements of the spallation and fission product production for depleted uranium and natural lead targets bombarded by 1100 MeV protons, 8:29278 (RA:US)

Fission Neutrons
High-energy fission models validation and comparison with experiments, 8:29277 (RA:US)

Meetings
Proceedings of the sixth meeting of the international collaboration on advanced neutron sources, 8:29268 (R:US)

Moderators
Cryogenic moderator design, 8:29271 (RA:US)
Grooved cold moderator tests, 8:29274 (RA:US)

Neutron Dosimetry
Methods of neutron and proton dosimetry at spallation sources, 8:30805 (RA:US)

Neutron Flux
High-energy fission models validation and comparison with experiments, 8:29277 (RA:US)
Monte Carlo study of the energy deposition of a flux of spallation neutrons in various samples, 8:29281 (RA:US)
Some aspects of the neutronics of the SIN neutron source, 8:29276 (RA:US)

Neutron Spectra
Possible use of copper spallation reactions to measure high energy particle spectra in shielding experiments, 8:29282 (RA:US)

Performance Testing
D-T neutron generator development for cancer therapy: 1982 annual progress report, 8:30241 (R:US)

Proton Beams
How much thermal neutron flux is gained using deuterons instead of protons, 8:29280 (RA:US)

Proton Dosimetry
Methods of neutron and proton dosimetry at spallation sources, 8:30805 (RA:US)

Remote Handling Equipment
Remote handling equipment for SNS, 8:30096 (RA:US)

Shielding
Computational methods for high-energy source shielding, 8:30787 (RA:US)

Spallation
Measured and calculated neutron yields for 100 MeV protons on thick targets of Pb and Li, 8:29279 (RA:US)
Measurements of the spallation and fission product production for depleted uranium and natural lead targets bombarded by 1100 MeV protons, 8:29278 (RA:US)
Time-structure of thermal neutron leakage from fast and slow moderators for spallation neutron sources, 8:29275 (RA:US)

Targets
Developing an optimum target design for a high energy spallation neutron source with respect to mechanical and thermal constraints, 8:29273 (RA:US)
Thermofluid dynamics of the liquid lead-bismuth target for the spallation neutron source at SIN, 8:29272 (RA:US)

Thermal Neutrons
Time-structure of thermal neutron leakage from fast and slow moderators for spallation neutron sources, 8:29275 (RA:US)

NEUTRON SPECTROMETERS
Design
D-D fusion neutron-spectra measurements and ion-temperature determination at Alcator C, 8:30851 (R:US)
Neutron diagnostics for magnetically confined plasmas, 8:30866 (RA:US)
Energy Resolution
Gravitational neutron spectrometer, 8:30278 (R:SU:In Russian)
Performance
Inelastic rotor spectrometer at the Harwell Linac, 8:30269 (RA:US)
Polarized Beams
Polarized epithermal neutron spectrometer at KENS, 8:30267 (RA:US)
Pulse Techniques
Dynamic range aspects of pulsed source instruments, 8:30785 (RA:US)
Time-of-Flight Method
Crystal analyzer TOF spectrometer (CAT) for high energy incoherent neutron scattering, 8:30786 (RA:US)

NEUTRON SPECTROSCOPY
Pulse Techniques
Dynamic range aspects of pulsed source instruments, 8:30785 (RA:US)
Resonance Absorption
eV neutron spectroscopy using resonance absorption energy selection on a pulsed source, 8:30266 (RA:US)

NEUTRON TRANSPORT
Computer Codes
A2F computer code for data preparation to carry out group calculations by the Monte Carlo method on the basis of the ARAMAKO-2F system, 8:30790 (R:SU:In Russian)

NEUTRON TRANSPORT THEORY
Two-Dimensional Calculations
Development of the two-dimensional cross-section sensitivity and uncertainty analysis code SENSIT-2D with applications to the FED, 8:30914 (R:US)

NEVADA TEST SITE
Gravity Surveys
Principal facts of gravity stations with gravity and magnetic profiles from the southwest Nevada Test Site, Nye County, Nevada, as of January 1982, 8:30602 (R:US)
Ground Motion
Prediction of downhole waveforms, 8:29163 (R:US)
Magnetic Surveys
Principal facts of gravity stations with gravity and magnetic profiles from the southwest Nevada Test Site, Nye County, Nevada, as of January 1982, 8:30602 (R:US)
Radioactive Waste Disposal
Scenarios for consequence assessments of radioactive-waste repositories at Yucca Mountain, Nevada Test Site, 8:29258 (R:US)

Biological Fouling
Biofouling and corrosion stdies at Keahole Point, Hawaii (1978-1980), 8:29396 (RA:US)
Compatibility
Irradiation and compatibility testing of Li_2O materials at EBR-II, 8:30885 (R:US)
Corrosion
Biofouling and corrosion stdies at Keahole Point, Hawaii (1978-1980), 8:29396 (RA:US)
Corrosion Resistance
AR and TD Fossil Energy Materials Program. Quarterly progress report for the period ending December 31, 1982, 8:28814 (R:US)
Fabrication
Method of fabricating thin-walled articles of tungsten-nickel-iron alloy (Patent), 8:29895 (P:US)
Mechanical Properties
AR and TD Fossil Energy Materials Program. Quarterly progress report for the period ending December 31, 1982, 8:28814 (R:US)
Oxidation
Initial stages of oxidation of metals and alloys. Progress report, March 29, 1983, 8:29874 (R:US)
Physical Radiation Effects
Density of neutron irradiated and annealed amorphous $Fe_{80}Ni_{00}B_{20}$, 8:29879 (R:DE)
Point-defect clustering in the presence of mobile helium and immobile traps, 8:29909 (J:US)
Point Defects
Point-defect clustering in the presence of mobile helium and immobile traps, 8:29909 (J:US)
Stress Corrosion
Irradiation and compatibility testing of Li_2O materials at EBR-II, 8:30885 (R:US)
Welding
AR and TD Fossil Energy Materials Program. Quarterly progress report for the period ending December 31, 1982, 8:28814 (R:US)

NICKEL ARSENIDES
Mutagenesis
Nickel arsenide (NI_5As_2): the relationship between its solubility and its toxicity and mutagenicity, 8:29091 (RA:US)
Toxicity
Nickel arsenide (Ni_5As_2): the relationship between its solubility and its toxicity and mutagenicity, 8:30537 (RA:US)
Nickel arsenide (NI_5As_2): the relationship between its solubility and its toxicity and mutagenicity, 8:29091 (RA:US)

NICKEL BASE ALLOYS
See also HASTELLOY C
Corrosion Resistance
Protective coatings for utility gas turbines. Final report, 8:29878 (R:US)
Electronic Structure
Electronic structure and surface oxidation of the Haucke compounds $CaNi_5$, YNi_5, $LaNi_5$ and $ThNi_5$, 8:29894 (J:CH)
Oxidation
Electronic structure and surface oxidation of the Haucke compounds $CaNi_5$, YNi_5, $LaNi_5$ and $ThNi_5$, 8:29894 (J:CH)
Permeability
Hydrogen diffusion and trapping in metals by a periodic technique (1045 Steel, nickel-2% thoria), 8:29869 (RA:US)
Traps
Hydrogen diffusion and trapping in metals by a periodic technique (1045 Steel, nickel-2% thoria), 8:29869 (RA:US)

NICKEL COMPOUNDS
See also NICKEL ARSENIDES
NICKEL HYDRIDES
Chemical Bonds
Infrared intensity and the CO-metal bond, 8:30018 (J:NL)
Metabolism
Dissolution half-times of nickel compounds in water, rat serum, and renal cytosol, 8:30574 (J:US)

NICKEL HYDRIDES
Neutron Reactions
Crystal analyzer TOF spectrometer (CAT) for high energy incoherent neutron scattering, 8:30786 (RA:US)

NICKEL IONS
Emission Spectra
Spectroscopy and lifetime measurements of highly ionized nickel, 8:30647 (J:NL:In French)
Ion Sources
Ion-source development at Argonne, 8:30633 (R:US)

NICKEL STEELS
Hydrogen Embrittlement
Gaseous hydrogen embrittlement of steel - the rate controlling process, 8:29916 (J:US)

NICKEL-CADMIUM BATTERIES
Battery Charging
Charge efficiency and charge utilization in the sealed nickel-cadmium cell. Technical report, 8:29707 (R:US)

NIMONIC PE16
Physical Radiation Effects
Gamma prime coarsening and redistribution in nimonic PE16 (Neutron irradiation), 8:29911 (J:US)
Swelling in reactor-conditioned nickel-ion irradiated nimonic PE16 (Neutron irradiation and nickel-ion irradiation), 8:29910 (J:US)
Tensile properties of neutron-irradiated Nimonic PE16, 8:29904 (J:US)
Swelling
Swelling in reactor-conditioned nickel-ion irradiated nimonic PE16 (Neutron irradiation and nickel-ion irradiation), 8:29910 (J:US)
Tensile Properties
Tensile properties of neutron-irradiated Nimonic PE16, 8:29904 (J:US)

NIOBIUM
Charged-Particle Transport
Diffusion and trapping of positive muons in niobium, 8:30795 (J:US)
Crystal Growth
Oriented growth of niobium films on the NaCl plane (001), 8:29885 (RA:SU:In Russian)
Lattice Vibrations
Vibrational frequencies via frozen phonons, 8:29982 (J:FR)
Muon Probes
Diffusion and trapping of positive muons in niobium, 8:30795 (J:US)
Production
Vacuum methods for production of niobium superconducting films, 8:29884 (RA:SU:In Russian)

NIOBIUM ALLOYS
See also INCONEL 600
INCONEL 718
INCONEL 82
Extrusion
Extrusion-formed uranium-2.4 wt % article with decreased linear thermal expansion and method for making the same, 8:29896 (P:US)
Thermal Conductivity
Thermal conductivity of niobium-titanium alloys in mixed state, 8:29882 (R:SU:In Russian)

NIOBIUM OXIDES
Crystal Structure
Investigation of titanium in metamict Nb-Ta-Ti oxides using the extended x-ray absorption fine structure technique, 8:29978 (BA:US)
Radiation Effects
Investigation of titanium in metamict Nb-Ta-Ti oxides using the extended x-ray absorption fine structure technique, 8:29978 (BA:US)

NITINOL HEAT ENGINES
Operation
Condensed-state heat engines, 8:29798 (RA:US)
NITRO COMPOUNDS
Mutagen Screening
Acute and genetic toxicity of 1-nitropyrene and its fate after single oral doses to rats, 8:30563 (J:US)
Phase Diagrams
Ammonium nitrate with 15 wt % potassium nitrate-ethylenediamine dinitrate-nitroguanidine system, 8:30028 (J:DE)
Radiolysis
Redox properties of free radicals, 8:30083 (J:US)
Toxicity
Acute and genetic toxicity of 1-nitropyrene and its fate after single oral doses to rats, 8:30563 (J:US)
NITROGEN
Biogeochemistry
Biogeochemical cycling of carbon, nitrogen, and phosphorus in saltwater marshes of Lavaca Bay, Texas. Final report, 8:30380 (R:US)
Mass Transfer
Exchange of carbon, nitrogen, and phosphorus in Lavaca Bay, Texas marshes. Volume I. The role of sediments in nutrient exchange in the Lavaca Bay brackish marsh system. Final report, 8:30382 (R:US)
Exchange of carbon, nitrogen and phosphorus in Lavaca Bay, Texas marshes. Volume II. The role of plants in nutrient exchange in the Lavaca Bay brackish marsh system. Final report, 8:30381 (R:US)
Exchange rates for carbon, nitrogen, and phosphorus in the Colorado River delta marshes. Final report, 8:30383 (R:US)
Uptake
Sulfur and nitrogen uptake by loblolly pine seedlings as influenced by nitrogen and sulfur addition, 8:30554 (J:US)
NITROGEN 15
Mass Spectroscopy
Automation of a mass spectrometer for nitrogen isotope analysis, 8:30000 (BA:NL)
NITROGEN COMPOUNDS
See also CYANATES
NITROGEN HYDRIDES
NITROGEN OXIDES
Toxicity
Structure-toxicity relationships of selected nitrogenous heterocyclic compounds II. Dinitrogen molecules, 8:30578 (J:DE)
NITROGEN HYDRIDES
See also AMMONIA
Electronic Structure
Electronic structure of Rydberg states of H_3, NeH, H_3F, H_3O, NH_4, and CH_3 molecules, 8:30012 (J:US)
NITROGEN IONS
Energy-Level Transitions
Doubly excited states in some light atoms, 8:30649 (J:NL)
NITROGEN NITRIDES
See NITROGEN
NITROGEN OXIDES
Absorption Spectra
Temperature-dependent ultraviolet absorption spectrum for dinitrogen pentoxide, 8:30013 (J:US)
Absorption Spectroscopy
Temperature-dependent ultraviolet absorption spectrum for dinitrogen pentoxide, 8:30327 (J:US)
Air Pollution Control
Pulverized-coal burner with low NO/sub x/ emission, 8:28970 (TJ:GB)
Biological Effects
Pulverized-coal burner with low NO/sub x/ emission, 8:28970 (TJ:GB)
NITROSAMINES
Metabolism
Dimethylnitrosamine demethylase activity in Drosophila melanogaster, 8:30557 (J:US)
NITROSO COMPOUNDS
See also NITROSAMINES
Genetic Effects
Sister chromatid exchange, DNA repair, and single-gene mutation, 8:30564 (J:US)
NMR
See NUCLEAR MAGNETIC RESONANCE
NMR SPECTROMETERS
Errors
Systematic errors in polarization measurements of polarized proton targets by the Q-meter method, 8:30308 (R:SU:In Russian)
NOBELIUM ISOTOPES
Spontaneous Fission
Rapid disappearance of shell effects in the fission of transfermium nuclei, 8:30776 (R:US)
NONAXIAL NUCLEI
See DEFORMED NUCLEI
NONRADIOACTIVE WASTES
See GASEOUS WASTES
SOLID WASTES
NORBORNADIENE
Crystal Structure
Crystal structure of (eta^5-C_5H_5)Mn(CO)$_2$-(eta^2-norbornadiene): the absence of a postulated C-H-metal interaction in an 18-electron complex, 8:30056 (J:NL)
Lattice Parameters
Crystal structure of (eta^5-C_5H_5)Mn(CO)$_2$-(eta^2-norbornadiene): the absence of a postulated C-H-metal interaction in an 18-electron complex, 8:30056 (J:NL)
Molecular Structure
Crystal structure of (eta^5-C_5H_5)Mn(CO)$_2$-(eta^2-norbornadiene): the absence of a postulated C-H-metal interaction in an 18-electron complex, 8:30056 (J:NL)
NORTH ATLANTIC REGION
See FEDERAL REGION I
NORTH DAKOTA
Oil Fields
Enhanced oil recovery by CO_2 miscible displacement in the Little Knife Field, Billings County, North Dakota, 8:29013 (J:US)
NORTH SEA
Petroleum Deposits
Petroleum resources of the North Sea, 8:28986 (R:US)
NORTHERN IRELAND
See UNITED KINGDOM

NOVA FACILITY
Reviews
The Lawrence Livermore National laboratory inertial fusion program, 8:30953 (J:US)
NOVA SCOTIA
Coal Mining
Environmental quality in Sydney and northeast industrial Cape Breton, Nova Scotia, 8:28873 (R:CA)
NSLS
Beam Transport
Single bunch transfer system for the National Synchrotron Light Source, 8:30216 (R:US)
Computerized Control Systems
Microprocessor techniques and construction at the NSLS, 8:30209 (R:US)
DC to DC Converters
NSLS dipole power source, 8:30249 (J:US)
Gamma Sources
High-energy gamma-ray beams from Compton-backscattered laser light, 8:30220 (R:US)
Performance
Status of the National Synchrotron Light Source, 8:30218 (R:US)
Wiggler Magnets
Undulators as sources of synchrotron radiation, 8:30210 (R:US)
NUCLEAR CONTROVERSY
See HUMAN POPULATIONS

NUCLEAR EMULSIONS
Alpha Reactions
Inelastic interactions of p, d, ^{4}He and ^{12}C projectiles with light (CNO) and heavy (AgBr) nuclei at 4.5 GeV/c per nucleon, 8:30737 (R:SU)
Carbon 12 Reactions
Inelastic interactions of p, d, ^{4}He and ^{12}C projectiles with light (CNO) and heavy (AgBr) nuclei at 4.5 GeV/c per nucleon, 8:30737 (R:SU)
Deuteron Reactions
Inelastic interactions of p, d, ^{4}He and ^{12}C projectiles with light (CNO) and heavy (AgBr) nuclei at 4.5 GeV/c per nucleon, 8:30737 (R:SU)
Proton Reactions
Inelastic interactions of p, d, ^{4}He and ^{12}C projectiles with light (CNO) and heavy (AgBr) nuclei at 4.5 GeV/c per nucleon, 8:30737 (R:SU)
NUCLEAR EXPLOSION DETECTION
Telluric Surveys
E-field-ratio telluric techniques applied to cavity detection for OSI operations, 8:30322 (R:US)
NUCLEAR MAGNETIC RESONANCE
Group Theory
Topological and group theoretical analysis in dynamic nuclear magnetic resonance spectroscopy, 8:30811 (J:US)
Topological Mapping
Topological and group theoretical analysis in dynamic nuclear magnetic resonance spectroscopy, 8:30811 (J:US)
NUCLEAR MATERIALS DIVERSION
Detection
Statistical analysis of cumulative shipper-receiver data, 8:29262 (R:US)
NUCLEAR MATERIALS MANAGEMENT
Data Processing
Computer processing of nuclear material data in the German Democratic Republic - as of August 1980, 8:29263 (R:DD)
Inventories
Strategic special nuclear material inventory differences. Semi-annual report, 8:29259 (R:US)
Safeguards
Chemical processing monthly report, 8:29110 (R:US)
NUCLEAR MOLECULES
Binding Energy
Orbiting in collisions between light heavy ions (A/sub T/ + A/sub P/ < 50), 8:30736 (R:US)
NUCLEAR PHYSICS
Use only for indexing articles of very broad coverage, such as annual reviews, text books, etc.
Meetings
Nuclear physics and solid-state physics symposium. Volume 23B. Nuclear physics, 8:30728 (R:IN)
Research Programs
Progress report, Physics Division, 1 January - 31 March 1981, 8:30727 (R:CA)
NUCLEAR POWER PLANTS
Construction
US central station nuclear electric generating units: significant milestones. Status as of October 1, 1982, 8:29595 (R:US)
Containment Buildings
Design of reinforced-concrete containment-wall elements under combined action of shear and tension, 8:29693 (R:US)
Containment Systems
ABAQUS-EPGEN: a general-purpose finite element code. Volume 3. Example problems manual, 8:29670 (R:US)
Decision Making
Seismic risk analysis and decisions for nuclear power plants, 8:29696 (J:NL)
Design Basis Accidents
Doses received while crossing a plume of radioactive material released during an accident at a nuclear power plant, 8:29695 (J:GB)
Dynamics
Modular Modeling System (MMS): a code for the dynamic simulation of fossil and nuclear power plants: overview and general theory. Final report, 8:29499 (R:US)
Emergency Plans
Atmospheric release advisory capability pilot project at two nuclear power plants and associated state offices of emergency preparedness. Final report, 8:30345 (R:US)
Engineered Safety Systems
Quantitative software reliability in nuclear safety, 8:29638 (R:US)
Fallout
Sewage sludge as a sensitive indicator for airborne radionuclides from nuclear power plants. Studies of distribution and behaviour of activation products in the terrestrial environment, 8:29621 (R:SE)
Fuel Cycle
Reactors and fuel production, 8:29537 (R:US)
Fuel Rods
Licensing applications and requirements of an ideal steady-state fuel-performance code. Final report, 8:29545 (R:US)
SPEAR-FCODE-GAMMA functional specifications. Final report, 8:29546 (R:US)
Legal Aspects
Licensee Event Report (LER) compilation: for month of March 1983, 8:29683 (R:US)
Mechanical Structures
ABAQUS-EPGEN: a general-purpose finite element code. Volume 3. Example problems manual, 8:29670 (R:US)
Neutron Dosimetry
Evaluation of personnel neutron dosimetry at operating nuclear power plants, 8:29565 (R:US)
Operation
Modular Modeling System (MMS): a code for the dynamic simulation of fossil and nuclear power plants: overview and general theory. Final report, 8:29499 (R:US)
Personnel
Evaluation of personnel neutron dosimetry at operating nuclear power plants, 8:29565 (R:US)
Neutron dosimetry at commercial nuclear plants. Final report of Subtask B: dosimeter response, 8:29551 (R:US)
Pipes
ABAQUS-EPGEN: a general-purpose finite element code. Volume 3. Example problems manual, 8:29670 (R:US)
Piping seismic test with energy-absorbing devices. Final report, 8:29542 (R:US)
Planning
US central station nuclear electric generating units: significant milestones. Status as of October 1, 1982, 8:29595 (R:US)
Radioactive Effluents
Atmospheric release advisory capability pilot project at two nuclear power plants and associated state offices of emergency preparedness. Final report, 8:30345 (R:US)
Reactor Accidents
Dispersion coefficients for coastal regions, 8:29692 (R:US)
Reactor Control Systems
Data analysis through interactive computer animation method (DATICAM), 8:29619 (R:US)
Digital computer operation of a nuclear reactor (Patent), 8:29620 (P:US)
Reactor Licensing
Regulatory licensing status summary report. Nuclear power plants data for decisions (Blue Book), March 1-March 31, 1983, 8:29596 (R:US)
Reactor Operation
Reactor operating experiences, 1978-1980, 8:29550 (R:US)
US central station nuclear electric generating units: significant milestones. Status as of October 1, 1982, 8:29595 (R:US)
Reactor Protection Systems
Quantitative software reliability in nuclear safety, 8:29638 (R:US)
Reactor Safety
Licensee Event Report (LER) compilation: for month of March 1983, 8:29683 (R:US)
Long-range research plan, FY 1984-FY 1988, 8:29680 (R:US)
Regulations
Technical regulation and the standardization in French nuclear safety, 8:29594 (R:FR:In French)

Risk Assessment
Seismic risk analysis and decisions for nuclear power plants, 8:29696 (J:NL)
Safety Engineering
1981 NRC/BNL/IEEE standards workshop on human factors and nuclear safety. The man-machine interface and human reliability: an assessment and projection, 8:29682 (R:US)
Seismic Effects
Seismic risk analysis and decisions for nuclear power plants, 8:29696 (J:NL)
Specifications
Reactors and fuel production, 8:29537 (R:US)
Standardization
Technical regulation and the standardization in French nuclear safety, 8:29594 (R:FR:In French)

Technology Assessment
Ocean engineering for ocean thermal energy conversion, 8:29354 (R:US)

OCEAN THERMAL POWER PLANTS
Anchors
OTEC mooring and anchoring systems: technology development plan, 8:29366 (RA:US)
Aquaculture
Assessment of OTEC-based mariculture operations, 8:29378 (RA:US)
Feasibility study of the OTEC complex for island applications, 8:29373 (RA:US)
Integrated OTEC-mariculture system, 8:29377 (RA:US)
Bench-Scale Experiments
Model basin tests of a baseline 40 MW OTEC pilot plant, 8:29364 (RA:US)
Chemical Effluents
Effects of chemical pollutants from the OTEC plants on Mugil cephalus, 8:29407 (RA:US)
Cleaning
Development of cleaning system at the Seacoast Test Facility, 8:29392 (RA:US)
Concretes
Practicalities of concrete for OTEC applications, 8:29368 (RA:US)
Control
Transient behavior and control of closed-cycle OTEC power systems, 8:29386 (RA:US)
Corrosion Protection
Corrosion control of an OTEC platform, 8:29369 (RA:US)
Desalination Plants
Feasibility study of the OTEC complex for island applications, 8:29373 (RA:US)
Design
Conceptual design of a shelf-mounted OTEC platform/CWP system, 8:29360 (RA:US)
Design and integration of a 40 MWe OTEC shelf-mounted pilot plant, 8:29370 (RA:US)
Preliminary design of 1 MWe OTEC test plant, 8:29374 (RA:US)
Second generation design of commercial OTEC plants, 8:29375 (RA:US)
Environmental Impacts
Environmental assessment of the second deployment of mini-OTEC, 8:29399 (RA:US)
Near-field physical model studies of OTEC mixing and recirculation, 8:29402 (RA:US)
Preliminary environmental assessment of the OTEC pilot plant program, 8:29398 (RA:US)
Programmatic environmental impact statement on commercial OTEC licensing, 8:29400 (RA:US)
Evaporators
Microbiofouling of aluminum and titanium ocean thermal energy conversion (OTEC) evaporator tubes at a potential OTEC site, 8:29393 (RA:US)
Feasibility Studies
Feasibility study of the OTEC complex for island applications, 8:29373 (RA:US)
Foam-Lift Cycles
Periodic accelerations in a rising foam column, 8:29384 (RA:US)
Heat Exchangers
Biofouling countermeasure evaluations for OTEC heat exchangers, 8:29390 (RA:US)
Development of cleaning system at the Seacoast Test Facility, 8:29392 (RA:US)
Macrofouling in simulated OTEC evaporators at Punta Tuna, Puerto Rico, 8:29395 (RA:US)
Materials considerations for the aluminum-tubed OTEC test article heat exchangers, 8:29387 (RA:US)
Microbial deposits, resistant to removal by the M.A.N. brush, on aluminum and titanium heat exchanger surfaces exposed to ambient seawater, 8:29394 (RA:US)
Transient behavior and control of closed-cycle OTEC power systems, 8:29386 (RA:US)
Hybrid Systems
Geothermal-enhanced OTEC (GEOTEC) resources and plant concepts, 8:29376 (RA:US)

Installation
Conceptual design of a shelf-mounted OTEC platform/CWP system, 8:29360 (RA:US)
Licensing
Programmatic environmental impact statement on commercial OTEC licensing, 8:29400 (RA:US)
Maintenance
Inspection, maintenance and repair considerations in the design of OTEC ocean engineering system, 8:29361 (RA:US)
Mist-Lift Cycles
Experimental demonstration of the feasibility of the mist flow ocean thermal energy process, 8:29383 (RA:US)
Moorings
OTEC mooring system development: recent accomplishments, 8:29365 (RA:US)
OTEC mooring and anchoring systems: technology development plan, 8:29366 (RA:US)
Open-Cycle Systems
Overview and recent progress on open-cycle OTEC power systems, 8:29381 (RA:US)
Pipes
Comparative study of three OTEC cold water pipe design analysis computer models, 8:29357 (RA:US)
Comparison of four computer programs for cold water pipe analysis, 8:29363 (RA:US)
Conceptual design of a shelf-mounted OTEC platform/CWP system, 8:29360 (RA:US)
OTEC cold water pipe technology development plan, 8:29356 (RA:US)
OTEC cold water pipe laboratory test program, 8:29358 (RA:US)
Response of the OTEC cold water pipe to current-induced hydrodynamic loading, 8:29359 (RA:US)
Study on dynamical behavior of 1MW OTEC CWP in Japan, 8:29362 (RA:US)
Plumes
Intermediate field plumes from OTEC plants: predictions for typical site conditions, 8:29403 (RA:US)
Pollution Regulations
Ocean energy converter regulatory compliance monitoring: status and assessment, 8:29401 (RA:US)
Research Programs
Overview and recent progress on open-cycle OTEC power systems, 8:29381 (RA:US)
Scale Models
Model basin tests of a baseline 40 MW OTEC pilot plant, 8:29364 (RA:US)
Steam Turbines
Design and development of an open cycle OTEC turbine with particular emphasis on mechanical design aspects of rotor blades, 8:29382 (RA:US)
Thermodynamic Cycles
Ammonia water systems in OTEC power plants, 8:29388 (RA:US)
Thermoelectric Generators
Design of 100 KW thermo-electric OTEC experimental power plant, 8:29380 (RA:US)
Feasibility study on thermoelectric OTEC at ETL, 8:29379 (RA:US)
Transients
Transient behavior and control of closed-cycle OTEC power systems, 8:29386 (RA:US)
Uses
New and viable OTEC application, 8:29371 (RA:US)
Small-scale OTEC applications, 8:29372 (RA:US)
Wave Forces
Environmental description requirements for OTEC plants loading design, 8:29409 (RA:US)
Model basin tests of a baseline 40 MW OTEC pilot plant, 8:29364 (RA:US)
Wind Loads
Environmental description requirements for OTEC plants loading design, 8:29409 (RA:US)
OCEANIC CRUST
Geology
Marine geologic data at OTEC sites, 8:29408 (RA:US)

WASTE WATER

OIL SHALES
See also BLACK SHALES
Biological Effects
Biochemical and cellular effects of inhalation exposure to oil shale dusts, 8:29081 (RA:US)
Effects of prolonged inhalation exposure to oil shale dust, 8:30553 (RA:US)
Inhalation studies, 8:29080 (RA:US)
Carcinogenesis
Inhalation studies, 8:29080 (RA:US)
Chemical Analysis
Organic and pyritic sulfur determination in oil shale, 8:29074 (R:US)
Dusts
Inhalation studies, 8:30535 (RA:US)
Explosive Fracturing
Engineering model for prediction of in-situ oil-shale retort blasting, 8:29066 (R:US)
Fracture Properties
Static and dynamic fracture behavior of oil shale, 8:29075 (J:US)
Inhalation
Biochemical and cellular effects of inhalation exposure to oil shale dusts, 8:29081 (RA:US)
In-Situ Retorting
Investigation of the geokinetics horizontal in-situ oil-shale retorting process. Sixth annual report, 1982, 8:29067 (R:US)
Modified In-Situ Processes
Characterization of in-situ oil-shale retorts prior to ignition, 8:29070 (P:US)
Quantitative Chemical Analysis
Analytical chemistry of oil shale, 8:29092 (RA:US)
Toxicity
Aerosol support, 8:29079 (RA:US)
Water Pollution
Assessment and control of water contamination associated with shale oil extraction and processing, 8:29095 (RA:US)

OIL SPILL FINGERPRINTING
See OIL SPILLS

OIL SPILLS
Environmental Impacts
Assessing the impact of oil spills on a commercial fishery. Final report, 8:29051 (R:US)
Information Systems
Principal offshore oil-spill accidents and tanker casualties databank (1955-1980) compiled by the Institut Francais du Petrole, 8:29052 (J:FR)

OIL WELLS
Carbon Dioxide Injection
Alvord (3000-ft Strawn) LPG flood: design and performance evaluation, 8:29010 (J:US)
CO_2 injection for tertiary oil recovery, Granny's Creek field, Clay County, West Virginia, 8:29011 (J:US)
Design and implementation of four enhanced recovery projects in bay fields of south Louisiana, 8:29014 (J:US)
Dissolution effects of CO_2-brine systems on the permeability of UK and North Sea calcareous sandstones, 8:29005 (J:US)
Effects of mobile water on multiple contact miscible gas displacements, 8:29007 (J:US)
Effects of petroleum-reservoir conditions on oil recovery by carbon dioxide injection, 8:28991 (R:US)
Enhanced oil recovery by CO_2 miscible displacement in the Little Knife Field, Billings County, North Dakota, 8:29013 (J:US)
Identification of water requirements for selected enhanced oil recovery methods, 8:28989 (R:US)
Investigation of phase behavior-macroscopic bypassing interaction in CO_2 flooding, 8:29006 (J:US)
Slaughter Estate Unit CO_2 pilot reservoir description via a black oil model waterflood history match, 8:29039 (J:US)
Three-phase quantitative monitoring method for CO_2 floods, 8:29004 (J:US)
Three-phase relative permeability measurements using the centrifuge method, 8:29008 (J:US)
Weeks Island S Sand Reservoir B gravity stable miscible CO_2 displacement, Iberia Parish, Louisiana, 8:29012 (J:US)
Caustic Flooding
Alkaline flood prediction studies, Ranger VII pilot, Wilmington Field, California, 8:29034 (J:US)
Identification of water requirements for selected enhanced oil recovery methods, 8:28989 (R:US)
Model for interfacial activity of acidic crude oil-caustic systems for alkaline flooding, 8:29031 (J:US)
Study of the oil wedge phenomenon through the use of chemical flood simulator, 8:29041 (J:US)
Directional Drilling
Residual and heavy-oil recovery using directionally drilled wells, 8:28995 (R:US)
Fluid Injection
Alteration of rock properties by adsorption of petroleum heavy ends: implications for enhanced oil recovery, 8:29003 (J:US)
Fluid Injection Processes
Cogeneration in enhanced oil recovery operations, 8:28992 (RA:US)
In-Situ Combustion
Development of the in-situ combustion process on an industrial scale at Videle field, Rumania, 8:29024 (J:US)
Identification of water requirements for selected enhanced oil recovery methods, 8:28989 (R:US)
In-situ combustion in naturally fractured heavy oil reservoirs, 8:29035 (J:US)
Laboratory investigation of the oxygen combustion process for heavy oil recovery, 8:29022 (J:US)
Preliminary study of in-situ combustion in diatomites, 8:29018 (J:US)
Sandia Heavy Oil Subprogram. FY 1982 annual report, 8:28994 (R:US)
Study of Getty Oil Co.'s successful in-situ combustion project in the Bellevue Field, 8:29023 (J:US)
Microbial EOR
Experimental studies of in-situ microbial enhanced oil recovery, 8:29045 (J:US)
Microemulsion Flooding
Effect of live crude on phase behavior and oil recovery efficiency of surfactant flooding systems, 8:29000 (J:US)
Enhanced oil recovery in Rumania, 8:29016 (J:US)
Evaluation of a conventional steam drive with ancillary materials: North Kern Front Field, 8:29042 (J:US)
Identification of water requirements for selected enhanced oil recovery methods, 8:28989 (R:US)
Isenhour unit: a unique polymer-augmented alkaline flood, 8:29033 (J:US)
Loudon surfactant flood pilot test, 8:29046 (J:US)
Measuring well injection profiles of polymer-containing fluids, 8:29047 (J:US)
Mobilization and banking of residual oil in high salinity reservoir systems with the use of aqueous surfactant solutions of ethoxylated carboxymethylates, 8:29029 (J:US)
Multiple slug scaling of linear and pattern laboratory chemical floods, 8:29030 (J:US)
New polymer for enhanced oil recovery, 8:29026 (J:US)
North Burbank Unit 1440-acre polymer flood project design, 8:29032 (J:US)
Performance of DOE's micellar-polymer project in northwest Oklahoma, 8:29036 (J:US)
Phase behavior of simple salt tolerant sulfonates, 8:29951 (J:US)
Rules for achieving high solubilization of brine and oil by amphiphilic molecules, 8:28999 (J:US)
Three-parameter representation of surfactant-oil-brine interaction, 8:29001 (J:US)
Steam Injection
Analysis of the early performance of the M-6 steam-drive project, Venezuela, 8:29025 (J:US)
Chemical enhancement of oil production by cyclic steam injection, 8:29017 (J:US)

Cogeneration in enhanced oil recovery operations, 8:28992 (RA:US)
Comparative evaluation of surface and downhold steam generation techniques, 8:29020 (J:US)
Direct-fired downhole steam generator: from design to field test, 8:29021 (J:US)
Evaluation of a conventional steam drive with ancillary materials: North Kern Front Field, 8:29042 (J:US)
Identification of water requirements for selected enhanced oil recovery methods, 8:28989 (R:US)
Method of measuring steam quality and heat loss in distribution and downhole piping, 8:29019 (J:US)
Seismic imaging in enhanced recovery, 8:29002 (J:US)
Waterflooding
Design and implementation of four enhanced recovery projects in bay fields of south Louisiana, 8:29014 (J:US)
Effects of mobile water on multiple contact miscible gas displacements, 8:29007 (J:US)
Identification of water requirements for selected enhanced oil recovery methods, 8:28989 (R:US)
Mobile wellhead analyzer for the determination of unstable constituents in oil-field waters, 8:29048 (J:US)
Slaughter Estate Unit CO_2 pilot reservoir description via a black oil model waterflood history match, 8:29039 (J:US)
Well Drilling
Polycrystalline-diamond drill bits for Venezuelan oil-field application, 8:28993 (R:US)
OKLAHOMA
Oil Fields
North Burbank Unit 1440-acre polymer flood project design, 8:29032 (J:US)
OLEFINS
See ALKENES
OLIGONUCLEOTIDES
See NUCLEOTIDES
ONCOGENIC TRANSFORMATIONS
Radioinduction
Biophysical aspects of radiation carcinogenesis, 8:30527 (BA:US)
Fission-spectrum neutrons at reduced dose rates enhance neoplastic transformation, 8:30521 (J:GB)
ON-LINE COMPUTERS
See COMPUTERS
ON-LINE CONTROL SYSTEMS
Digital computer operation of a nuclear reactor (Patent), 8:29620 (P:US)
OPACITY
Measuring Instruments
Apparatus and method for quantitative measurement of small differences in optical absorptivity between two samples using differential interferometry and the thermooptic effect, 8:30312 (P:US)
Measuring Methods
Apparatus and method for measurement of weak optical absorptions by thermally induced laser pulsing, 8:30311 (P:US)
OPEN PLASMA DEVICES
See also MAGNETIC MIRRORS
PLASMA FOCUS DEVICES
Energy Losses
Effect of gas recycling and secondary electron emission on the axial power flow in an open-ended device, 8:30873 (J:AT)
OPTICAL DENSITY
See OPACITY
OPTICAL EQUIPMENT
Machining
Ultraprecision machining of optics at Los Alamos, 8:30115 (J:US)
Thermal Conductivity
Structure of thermal radiation field in an optically thick limit, 8:30815 (J:US)
OPTICAL MODELS
Computer Calculations
SCAT2: a spherical optical model code, 8:30777 (R:FR:In French)
OPTICAL SYSTEMS
Optical engineering at Los Alamos: a history, 8:30105 (R:US)
Refractivity
Effect of nonlinear refraction on beam brightness in laser fusion applications, 8:30979 (J:US)
OPTIMIZATION
Set Theory
Combinatorial optimization with Boolean constraints, 8:30999 (R:US)
ORES
See also URANIUM ORES
Hydraulic Transport
Integration of mine dewatering installations with a hydraulic hoisting system, 8:28927 (BA:US)
ORGANIC BROMINE COMPOUNDS
See also BROMINATED ALIPHATIC HYDROCARBONS
Toxicity
In vivo sister-chromatid exchange assay in the larvae of the mussel Mytilus edulis: response to 3 mutagens, 8:30573 (J:NL)
ORGANIC CHLORINE COMPOUNDS
Biological Effects
Inactivation of Rhodospirillum rubrum ribulose bisphosphate carboxylase/oxygenase by the affinity label 2-N-chloroamino-2-deoxypentitol 1,5-bisphosphate, 8:30409 (J:NL)
ORGANIC COMPOUNDS
See also ALDEHYDES
AMINES
AROMATICS
HETEROCYCLIC COMPOUNDS
HYDROCARBONS
KETONES
LIPIDS
NUCLEOTIDES
ORGANIC NITROGEN COMPOUNDS
ORGANIC OXYGEN COMPOUNDS
ORGANIC SULFUR COMPOUNDS
ORGANOMETALLIC COMPOUNDS
PROTEINS
Leaching
Development of a method for determining the leachability of organic compounds from solid wastes, 8:30361 (J:US)
ORGANIC FLUORINE COMPOUNDS
Excitation
Laser-excited infrared fluorescence in oxalyl fluoride. Relaxation in the presence of a low-energy, one-dimensional quasicontinuum, 8:30052 (J:US)
ORGANIC MATTER
Only for unspecified materials containing chain and ring compounds of carbon; if specific organic compounds are studied, use descriptors for the compounds.
Environmental Transport
Transport of organic carbon to the oceans by rivers of North America: a synthesis of existing data, 8:30384 (J:SE)
ORGANIC NITROGEN COMPOUNDS
Excluding PROTEINS, AMINES, ALKALOIDS, AMINO ACIDS, NUCLEIC ACIDS, and NUCLEOTIDES.
See also AMIDES
AZIDO COMPOUNDS
GUANIDINES
NITRO COMPOUNDS
NITROSO COMPOUNDS
PORPHYRINS
Electron Transfer
Excited-state redox properties of ruthenium(II) phthalocyanine from electron-transfer quenching, 8:30067 (J:US)
ORGANIC OXYGEN COMPOUNDS
Excluding HYDROXY COMPOUNDS, CARBONIC ACID DERIVATIVES, LIPIDS, STEROIDS, CARBOHYDRATES, ORGANIC ACIDS, ALDEHYDES, KETONES and ESTERS.
See also EPOXIDES
ETHERS
FURANS
HETEROCYCLIC OXYGEN COMPOUNDS
PSORALEN
PYRANS
QUINONES
RHODAMINES
NMR Spectra
Nuclear magnetic resonance detected nuclear resonance of transient radicals, 8:30077 (J:US)

ORGANIC SOLVENTS
Chemical Analysis
Heavy-recycle-solvent studies in two-stage coal liquefaction. Third technical progress report, December 11, 1982-March 10, 1983, 8:28808 (R:US)
Density
Rheology of coal slurries at process temperatures and pressures, 8:28827 (R:US)
Fractionation
Heavy-recycle-solvent studies in two-stage coal liquefaction. Third technical progress report, December 11, 1982-March 10, 1983, 8:28808 (R:US)
Liquid Column Chromatography
Heavy-recycle-solvent studies in two-stage coal liquefaction. Third technical progress report, December 11, 1982-March 10, 1983, 8:28808 (R:US)
Recycling
Heavy-recycle-solvent studies in two-stage coal liquefaction. Third technical progress report, December 11, 1982-March 10, 1983, 8:28808 (R:US)
Rheology of coal slurries at process temperatures and pressures, 8:28827 (R:US)
Rheology
Rheology of coal slurries at process temperatures and pressures, 8:28827 (R:US)
ORGANIC SULFUR COMPOUNDS

Frequency of chromosome aberrations found in peripheral blood lymphocytes of men servicing nuclear powered submarines, 8:30482 (RA:DE)
Chromosomal Aberrations
Frequency of chromosome aberrations found in peripheral blood lymphocytes of men servicing nuclear powered submarines, 8:30482 (RA:DE)

Conflicts of Interest
Investigation of allegations made in a fourteen-page document, 8:29730 (R:US)
Dosemeters
Neutron dosimetry at commercial nuclear plants. Final report of Subtask B: dosimeter response, 8:29551 (R:US)
Ethics
Investigation of allegations made in a fourteen-page document, 8:29730 (R:US)
Medical Examinations
Medical studies of oil shale workers at Geokinetics, Inc., Vernal, Utah, 8:29077 (RA:US)
Radiation Doses
Evaluation of personnel neutron dosimetry at operating nuclear power plants, 8:29565 (R:US)
Radiation Protection
Neutron dosimetry at commercial nuclear plants. Final report of Subtask B: dosimeter response, 8:29551 (R:US)
Sister Chromatid Exchanges
Sister chromatid exchange rates in Geokinetics oil shale workers, 8:29078 (RA:US)
Training
Information and training program for state and regional SLAP organizations. Final report, February 1, 1981-January 31, 1983, 8:29768 (R:US)
PERSONNEL MANAGEMENT
Investigation of allegations made in a fourteen-page document, 8:29730 (R:US)
PERSONNEL MONITORING
Personal monitoring and assessment of doses received by radiation workers, 8:30471 (R:AU)
PERTECHNETATES
Specific compounds should be indexed by coordination of a descriptor of the form (CATION) COMPOUNDS and the above anion descriptor.
Diffusion
Diffusion of neptunyl(V) and pertechnetate ions in marine sediments, 8:29123 (R:US)
PERU
Information Needs
Information services. Report to the Government of Peru, 8:31016 (R:XA)
PETROCHEMICAL FEEDSTOCKS
See PETROCHEMICALS
PETROCHEMICALS
See also PLASTICS
Prices
Monthly petroleum product price report, 8:29050 (R:US)
PETROLEUM
Limited to crude oil; see also COAL LIQUIDS, SHALE OIL, etc.
Adsorption
Alteration of rock properties by adsorption of petroleum heavy ends: implications for enhanced oil recovery, 8:29003 (J:US)
Biodegradation
Biodegradation of oil in ponds, 8:30379 (R:US)
Carcinogenesis
Dose-response study for three shale crude oils and two natural petroleums, 8:30534 (RA:US)
Chemical Activation
Light activation of natural and synthetic petroleums, 8:28982 (RA:US)
Distillation
Characterization of Cerro Negro crude. Part I. Physical and chemical separations (Project shared by Bartlesville Energy Technology Center, US DOE, and Institute de Tecnologico del Venezolana Petroleo), 8:29055 (J:US)
Enhanced Recovery
Contracts for field projects and supporting research on enhanced oil recovery and improved drilling technology. Progress review No. 32, quarter ending September 30, 1982, 8:28990 (R:US)
Imports
Reexamination of the oil-transfer pricing program, 8:29727 (R:US)
Mutagen Screening
Genotoxicity of natural and synthetic oils in the Ames/Salmonella test, 8:29082 (RA:US)
Light activation of natural and synthetic petroleums, 8:28982 (RA:US)
Mutagenesis
Light activation of natural and synthetic petroleums, 8:30548 (RA:US)
Near Ultraviolet Radiation
Light activation of natural and synthetic petroleums, 8:28982 (RA:US)
Phase Studies
Mobilization and banking of residual oil in high salinity reservoir systems with the use of aqueous surfactant solutions of ethoxylated carboxymethylates, 8:29029 (J:US)
Phase Transformations
Lumped-component characterization of crude oils for compositional simulation, 8:29009 (J:US)
Prices
Reexamination of the oil-transfer pricing program, 8:29727 (R:US)
Reserves
Petroleum resources of the North Sea, 8:28986 (R:US)
Resource Conservation
New concepts reduce process energy, 8:29831 (J:US)
Solubility
Effects of solubility on tumorigenesis of two shale crude oils and two natural petroleums, 8:30533 (RA:US)
Effects of solubility on tumorigenesis of two shale crude oils and two natural petroleums, 8:29089 (RA:US)
Rules for achieving high solubilization of brine and oil by amphiphilic molecules, 8:28999 (J:US)
Toxicity
Dose-response study for three shale crude oils and two natural petroleums, 8:30534 (RA:US)
Dose-response study for three shale crude oils and two natural petroleums, 8:29090 (RA:US)
Effects of solubility on tumorigenesis of two shale crude oils and two natural petroleums, 8:30533 (RA:US)
Effects of solubility on tumorigenesis of two shale crude oils and two natural petroleums, 8:29089 (RA:US)
Genotoxicity of natural and synthetic oils in the Ames/Salmonella test, 8:29082 (RA:US)
Light activation of natural and synthetic petroleums, 8:30548 (RA:US)
Underground Storage
User instructions for programs NEDIT and NPRED, 8:29057 (R:US)
Waste Processing
Biodegradation of oil in ponds, 8:30379 (R:US)
PETROLEUM COKE
See COKE
PETROLEUM PRODUCTS
PETROLEUM DEPOSITS
Land Leasing
Final Environmental Impact Statement on oil and gas leasing in the National Petroleum Reserve in Alaska, 8:30398 (R:US)
Leasing
Taxing Alaskan oil, 8:28984 (RA:US)
Resource Assessment
Petroleum resources of the North Sea, 8:28986 (R:US)
Taxes
Taxing Alaskan oil, 8:28984 (RA:US)
PETROLEUM DISTILLATES
Boiling point range 0-600°C.
Chemical Analysis
Characterization of Cerro Negro crude. Part I. Physical and chemical separations (Project shared by Bartlesville Energy Technology Center, US DOE, and Institute de Tecnologico del Venezolana Petroleo), 8:29055 (J:US)
Characterization of Cerro Negro crude. Part II. Chemical analysis (Project sponsored by Bartlesville Energy Technology Center and Institute de Tecnologico del Venezolana Petroleo), 8:29056 (J:US)

Liquid Column Chromatography
Characterization of Cerro Negro crude. Part II. Chemical analysis (Project sponsored by Bartlesville Energy Technology Center and Institute de Tecnologico del Venezolana Petroleo), 8:29056 (J:US)

PETROLEUM INDUSTRY
Productivity
Estimating the short-term producibility of oil and gas, 8:29763 (R:US)

PETROLEUM PRODUCTS
See also DIESEL FUELS
FUEL OILS
GASOLINE
KEROSENE
LIQUEFIED PETROLEUM GASES
LUBRICATING OILS
PETROCHEMICALS
Mutagen Screening
Genotoxicity of natural and synthetic oils in the Ames/Salmonella test, 8:30546 (RA:US)
Toxicity
Genotoxicity of natural and synthetic oils in the Ames/Salmonella test, 8:30546 (RA:US)

PETROLEUM REFINERIES
Energy Conservation
New concepts reduce process energy, 8:29831 (J:US)

PETROLEUM SULFONATES
Phase Studies
Phase behavior of simple salt tolerant sulfonates, 8:29951 (J:US)

PETT
See POSITRON COMPUTED TOMOGRAPHY

PH VALUE
Environmental Effects
Hydrogen and sulfate additions to the forest floor and their effects on soil and litter arthropods, 8:30358 (R:US)

PHASE CHANGE MATERIALS
Use with the specific phase change material (e.g. calcium chloride) when known.
Latent Heat Storage
Review of latent heat storage technology, 8:29706 (R:US)

PHENANTHRENE
Fluorescence Spectroscopy
Identification and quantification of polynuclear aromatic compounds in synthoil by room-temperature phosphorimetry, 8:28836 (J:NL)
Thermodynamic Properties
Correlations for estimating critical constants, acentric factor, structure factor, and dipole moment for undefined fractions, 8:28831 (RA:US)

PHENIX REACTOR
Doppler Coefficient
Measurements of the Doppler effect at Phenix, 8:29577 (R:FR)

PHENOLS
See also CRESOLS
XYLENOLS
Gas Chromatography
Identification by gas-liquid chromatography-mass spectrometry of low-molecular-weight products from the aqueous alkaline degradation of cellulose, 8:30061 (J:NL)
Liquid Column Chromatography
Identification by gas-liquid chromatography-mass spectrometry of low-molecular-weight products from the aqueous alkaline degradation of cellulose, 8:30061 (J:NL)
Mass Spectroscopy
Identification by gas-liquid chromatography-mass spectrometry of low-molecular-weight products from the aqueous alkaline degradation of cellulose, 8:30061 (J:NL)
Radiolysis
One-electron redox potentials of phenols. Hydroxy- and aminophenois and related compounds of biological interest, 8:30081 (J:US)
Redox properties of free radicals, 8:30083 (J:US)
Redox Potential
One-electron redox potentials of phenols. Hydroxy- and aminophenois and related compounds of biological interest, 8:30081 (J:US)

PHENOXY RADICALS
Raman Spectra
Resonance Raman spectra of galvinoxyl free radical, 8:30082 (J:NL)

PHENYL METHYL ETHER

GALLIUM PHOSPHATES
IRON PHOSPHATES
LANTHANUM PHOSPHATES
NEODYMIUM PHOSPHATES
NEPTUNIUM PHOSPHATES
PLUTONIUM PHOSPHATES
POTASSIUM PHOSPHATES
URANIUM PHOSPHATES
Chemical Reactions
Characterization of molybdenum interfacial crud in a uranium mill that employs tertiary-amine solvent extraction, 8:29104 (R:US)

PHOSPHINES
Synthesis
Metallocarboranes structurally engineered for the reduction of carbon monoxide, 8:28793 (R:US)

PHOSPHORIC ACID ESTERS
Structural Chemical Analysis
Di-rho-methylphenylphosphoric acid: the solid state structure of a unique dimeric hydrogen bonded phosphoric acid, 8:30058 (J:GB)

PHOSPHORUS
Biogeochemistry
Biogeochemical cycling of carbon, nitrogen, and phosphorus in saltwater marshes of Lavaca Bay, Texas. Final report, 8:30380 (R:US)
Mass Transfer
Exchange of carbon, nitrogen, and phosphorus in Lavaca Bay, Texas marshes. Volume I. The role of sediments in nutrient exchange in the Lavaca Bay brackish marsh system. Final report, 8:30382 (R:US)
Exchange of carbon, nitrogen and phosphorus in Lavaca Bay, Texas marshes. Volume II. The role of plants in nutrient exchange in the Lavaca Bay brackish marsh system. Final report, 8:30381 (R:US)
Exchange rates for carbon, nitrogen, and phosphorus in the Colorado River delta marshes. Final report, 8:30383 (R:US)
Metabolism
Longterm dissolved and particulate alkaline phosphatase activity in a hardwater lake in relation to lake stability and phosphorus enrichments, 8:30388 (J:DE)
Mineral Cycling
Mat-water phosphorus exchange in an acid bog lake, 8:30376 (J:US)
Solvent Extraction
Determination of extraction equilibria for several metals in the development of a process designed to recover aluminum and other metals from coal combustion ash, 8:28821 (J:NL)

PHOTOCHEMICAL OXIDANTS
Health Hazards
Incorporating oxidants in assessments of energy-related health effects, 8:29750 (R:US)

PHOTOCHEMISTRY
Research Programs
Radiation Laboratory quarterly report, January 1-March 31, 1983, 8:30076 (R:US)

PHOTODIODES
Design
Infrared photoemitting diode having reduced work function, 8:30149 (P:US)
PHOTODISINTEGRATION
See PHOTONUCLEAR REACTIONS
PHOTOIONIZATION
Spectroscopy
Resonance ionization spectroscopy, 8:30072 (J:US)
PHOTOMAGNETOELECTRIC EFFECT
See MAGNETIC FIELDS
PHOTOMULTIPLIERS
Stabilization
Light-stabilized photomultiplier detector assembly with pulse- and current-mode operation, 8:30276 (R:US)
PHOTON BEAMS
Beam Monitors
Current integrator using an ADC-module, 8:30279 (R:JP:In Japanese)
PHOTON COLLISIONS
See also PHOTON-MOLECULE COLLISIONS
Desorption
Photodissociative ionization of amorphous ice, 8:30655 (J:NL)
Dissociation
Photodissociative ionization of amorphous ice, 8:30655 (J:NL)
PHOTON-MOLECULE COLLISIONS
Absorption Spectra
Many-body processes in atomic and molecular physics. Progress report, September 1, 1982-August 31, 1983, 8:30636 (R:US)
Dissociation
Many-body processes in atomic and molecular physics. Progress report, September 1, 1982-August 31, 1983, 8:30636 (R:US)
Excitation
Multiphoton-induced fluorescence and ionization of B^1u^+ carbon monoxide, 8:30643 (R:US)
Ionization
Multiphoton-induced fluorescence and ionization of $B^1\Sigma^+$ carbon monoxide, 8:30643 (R:US)
PHOTON-PROTON INTERACTIONS
Cross Sections
Diffraction dissociation and the direct hadronic interaction of the photon, 8:30668 (R:US)
Diffraction Models
Diffraction dissociation and the direct hadronic interaction of the photon, 8:30668 (R:US)
Multiple Production
Jet production in diffractive dissociation of mesons and photons, 8:30706 (B:US)
PHOTONUCLEAR REACTIONS
Knock-Out Reactions
El gamma strength from (γ,n) measurement in ^{96}Mo, 8:30747 (RA:US)
PHOTOSYNTHESIS
Path of carbon: from stratosphere to cell, 8:30440 (R:US)
Biochemical Reaction Kinetics
Picosecond fluorescence kinetics and energy transfer in chloroplasts and algae, 8:30417 (J:NL)
Electron Transfer
Theoretical calculations of kinetics of the radical pair P/sup E/ state in bacterial photosynthesis, 8:30407 (J:NL)
PHOTOSYNTHETIC BACTERIA
Photosynthetic Reaction Centers
Theoretical calculations of kinetics of the radical pair P/sup E/ state in bacterial photosynthesis, 8:30407 (J:NL)
PHOTOVOLTAIC POWER PLANTS
Feasibility Studies
Penetration study for a photovoltaic central solar power plant of output 500 kW-1MW with storage-battery capacity, 8:29338 (R:XE:In German)
PHOTOVOLTAIC POWER SUPPLIES
Bibliographies
Bibliography of reports by the Sandia Photovoltaic Projects, 8:29322 (R:US)
Combined Collectors
Intermediate photovoltaic system application experiment operational performance report. Volume 8. For G.N. Wilcox Memorial Hospital, Kauai, Hawaii for December 1982, 8:29340 (R:US)
Concentrator Solar Cells
Intermediate photovoltaic system application experiment operational performance report. Volume 8. For G.N. Wilcox Memorial Hospital, Kauai, Hawaii for December 1982, 8:29340 (R:US)
Economic Analysis
Reliability-economics analysis models for photovoltaic power systems. Volume 1., 8:29348 (R:US)
Reliability-economics analysis models for photovoltaic power systems. Volume 2 (SOLREL), 8:29349 (R:US)
Economics
Resources and economic assessment of centralized and decentralized solar-electric systems. Final report, 8:29337 (R:US)
Meetings
Sandia photovoltaic systems definition and application experiment projects, 8:29350 (R:US)
Performance
Intermediate photovoltaic system application experiment operational performance report for CDC Light Manufacturing Bldg., San Bernadino, California for November 1982, 8:29346 (R:US)
Intermediate photovoltaic system application experiment operational performance report for CDC Light Manufacturing Bldg., San Bernadino, California for September 1982, 8:29344 (R:US)
Intermediate photovoltaic system application experiment operational performance report for Newman Power Station, El Paso, Texas for December 1982, 8:29342 (R:US)
Intermediate photovoltaic system application experiment operational performance report for Lovington Square Shopping Center, Lovington, New Mexico for December 1982, 8:29341 (R:US)
Intermediate photovoltaic system application experiment operational performance report. Volume 8. For G.N. Wilcox Memorial Hospital, Kauai, Hawaii for December 1982, 8:29340 (R:US)
Intermediate photovoltaic system application experiment operational performance report. Volume 10. For CDC Light Manufacturing Bldg., San Bernardino, California for December 1982, 8:29347 (R:US)
Intermediate photovoltaic system application experiment operational performance report. Volume 8. For Oklahoma Center for Science and Arts, Oklahoma City, Oklahoma for December 1982, 8:29343 (R:US)
Intermediate photovoltaic system application experiment operational performance report. Volume 8. For CDC Light Manufacturing Bldg., San Bernadino, California for October 1982, 8:29345 (R:US)
Reliability
Reliability-economics analysis models for photovoltaic power systems. Volume 1., 8:29348 (R:US)

Fast-ion orbit effects during ion-cyclotron range of frequency experiments on the Princeton large torus, 8:30865 (R:US)
Fast-wave ion cyclotron heating in the Princeton Large Torus, 8:30878 (BA:XA)

Reviews
PLT and PDX results, 8:30952 (J:US)
PLUTONIUM
Adsorption
Precipitation process for supernate decontamination, 8:29127 (R:US)
Chemistry
Study of plutonium in nitrate systems, 8:30089 (R:DE:GE)
Intestinal Absorption
Continued studies of the gastrointestinal absorption of plutonium by rodents: relationships to feeding regimen and age of animals, 8:30468 (RA:US)
Radiological and Environmental Research Division, Center for Human Radiobiology. Annual report, July 1981-June 1982 (Lead Abstract), 8:30463 (R:US)
Leaching
Leaching of actinides from simulated nuclear waste glass, 8:29229 (BA:US)
Mass Spectroscopy
Mobile mass spectrometry laboratory for isotopic ratio measurements of uranium and plutonium, 8:30310 (J:NL)
Nondestructive Analysis
Nondestructive evaluation of sampling error for plutonium assay, 8:29987 (R:US)
Nuclear Materials Management
Chemical processing monthly report, 8:29110 (R:US)
PLUTONIUM 238 TARGET
Neutron Reactions
Some aspects of the evaluation of ^{237}Np, ^{238}Pu and ^{241}Am capture cross-sections in the unresolved region, 8:30773 (RA:US)
PLUTONIUM 239
Chronic Exposure
Estimation of lung cancer risk from environmental exposure to airborne plutonium from the Rocky Flats Plant, 8:30515 (RA:US)
Environmental Exposure Pathway
Surficial contamination of vegetation by soil, 8:30365 (RA:US)
Inhalation
Estimation of lung cancer risk from environmental exposure to airborne plutonium from the Rocky Flats Plant, 8:30515 (RA:US)
Estimation of the bronchial cancer riak from the inhalation of long-lived alpha emitting radionuclides, 8:30516 (RA:US)
Microdosimetry of alpha-irradiated lung, 8:30507 (RA:US)
Lung Clearance
Dosimetry and response in rat pulmonary epithelium following inhalation of $^{239}PuO_2$, 8:30502 (RA:US)
Radioecological Concentration
Investigation of radionuclide concentrations in tissues of elk utilizing Los Alamos National Laboratory lands, 8:30364 (RA:US)
Solvent Extraction
Development of partitioning method - cold and semihot experimental works with partitioning testing apparatus, 8:29130 (R:JP:In Japanese)
Tissue Distribution
Dosimetry and response in rat pulmonary epithelium following inhalation of $^{239}PuO_2$, 8:30502 (RA:US)
PLUTONIUM 239 TARGET
Neutron Reactions
Status of neutron capture data of ^{233}U, ^{235}U and ^{239}Pu in the unresolved resonance region, 8:30770 (RA:US)
PLUTONIUM 240
Chronic Exposure
Estimation of lung cancer risk from environmental exposure to airborne plutonium from the Rocky Flats Plant, 8:30515 (RA:US)
Inhalation
Estimation of lung cancer risk from environmental exposure to airborne plutonium from the Rocky Flats Plant, 8:30515 (RA:US)
PLUTONIUM 240 TARGET
Neutron Reactions
Fast neutron capture in actinide isotopes: recent results from Karlsruhe, 8:30771 (RA:US)
PLUTONIUM 242 TARGET
Neutron Reactions
Fast neutron capture in actinide isotopes: recent results from Karlsruhe, 8:30771 (RA:US)
PLUTONIUM CARBONATES
Absorption Spectra
Study of plutonium in nitrate systems, 8:30089 (R:DE:GE)
PLUTONIUM DIOXIDE
Calorimetry
Nondestructive evaluation of sampling error for plutonium assay, 8:29987 (R:US)
Chemical Analysis
Nondestructive evaluation of sampling error for plutonium assay, 8:29987 (R:US)
PLUTONIUM ISOTOPES
See also PLUTONIUM 239
PLUTONIUM 240
Laser Isotope Separation
Isotope separation by laser means (Patent), 8:29106 (P:US)
PLUTONIUM NITRATES
Absorption Spectra
Study of plutonium in nitrate systems, 8:30089 (R:DE:GE)
PLUTONIUM OXIDES
See also PLUTONIUM DIOXIDE
Excretion
Modifications to the ICRP model for inhaled plutonium oxide based on the observed lung clearance and urinary excretion, 8:30510 (RA:US)
Inhalation
Microdosimetry of alpha-irradiated lung, 8:30507 (RA:US)
Lung Clearance
Dosimetry of internally deposited radionuclides in lung and its usefulness in predicting biological effects, 8:30498 (RA:US)
Dosimetry and response in rat pulmonary epithelium following inhalation of $^{239}PuO_2$, 8:30502 (RA:US)
Modifications to the ICRP model for inhaled plutonium oxide based on the observed lung clearance and urinary excretion, 8:30510 (RA:US)
Physical Radiation Effects
Spontaneous fragmentation of an alpha-active ceramic: a mechanism for dispersion of solid waste, 8:29943 (BA:US)
Tissue Distribution
Dosimetry and response in rat pulmonary epithelium following inhalation of $^{239}PuO_2$, 8:30502 (RA:US)
PLUTONIUM PHOSPHATES
Chemical Preparation
Preparation of metal phosphates by a reaction using boron phosphate, 8:30017 (P:US)
PNA
See POLYCYCLIC AROMATIC HYDROCARBONS
PNEUMATIC TRANSPORT
Measuring Instruments

POINT MUTATIONS
See GENE MUTATIONS
POISONS (CHEMICAL)
See HAZARDOUS MATERIALS
POLAND
District Heating
Use of coal for urban district heating, 8:29853 (R:XU)
Waste Product Utilization
International aspects of development of the uses of fly ash with cement (Denmark, India, France, Great Britain, Canada, Japan, South Africa, Australia, USA, China, Poland), 8:28857 (RA:US)
POLARIZED TARGETS
Meetings
Workshop on polarized targets and materials. Summary, 8:30204 (R:US)
POLICY
See ENERGY POLICY
ENVIRONMENTAL POLICY

POLLUTANTS
Not for radioactive contaminants for which use RADIOACTIVE WASTES or other related terminology.
Biological Accumulation
Assay for bioavailability of uranium mill tailings contaminants, 8:30356 (RA:US)
Environmental Transport
Development of a simplified model to predict runoff, sediment yield, and contaminant transport in Mortandad Canyon, 8:30390 (RA:US)
Uptake
Assay for bioavailability of uranium mill tailings contaminants, 8:30356 (RA:US)
POLLUTION ABATEMENT
Methods of preventing the occurrence of pollution.
Decision Making
Decision under several objectives. Technical report SOL 77-20, 8:29753 (R:US)
Economic Elasticity
Decision under several objectives. Technical report SOL 77-20, 8:29753 (R:US)
Economic Impact
Model energy audit procedure for the RCS program, 8:29751 (BA:US)
Social Impact
Model energy audit procedure for the RCS program, 8:29751 (BA:US)
POLLUTION REGULATIONS
Regulations for nonradioactive pollution only; see also CONTAMINATION REGULATIONS.
Energy Demand
Industrial energy use, nonattainment, and the Clean Air Act reauthorization, 8:30348 (R:US)
POLOIDAL DIVERTOR EXPERIMENT
See PDX DEVICES
POLOIDAL DIVERTORS
A divertor which takes out poloidal magnetic field lines, forming a separatrix in the poloidal field.
Performance
Simplified poloidal divertor experiments in Doublet III, 8:30963 (BA:XA)
POLONIUM 214
Inhalation
Assessment of lung dose from radon daughters in the mine atmosphere, 8:30512 (RA:US)
POLONIUM 218
Inhalation
Assessment of lung dose from radon daughters in the mine atmosphere, 8:30512 (RA:US)
POLYACRYLATES
Evaluation
New polymer for enhanced oil recovery, 8:29026 (J:US)
POLYATOMIC MOLECULES
Anions
Negative ions of polyatomic molecules, 8:30661 (J:US)
Electron-Molecule Collisions
Negative ions of polyatomic molecules, 8:30661 (J:US)
Energy Levels
Classical estimates of the numbers of normal, local and stochastic states of polyatomic molecules as functions of energy: applications to H_2O, 8:30631 (R:US)
Vibrational States
Classical estimates of the numbers of normal, local and stochastic states of polyatomic molecules as functions of energy: applications to H_2O, 8:30631 (R:US)
POLYCYCLIC AROMATIC HYDROCARBONS
Fluorescence Spectroscopy
Identification and quantification of polynuclear aromatic compounds in synthoil by room-temperature phosphorimetry, 8:28836 (J:NL)
Stability
Relative stability of cations and anions of conjugated polycyclic hydrocarbons, 8:30047 (J:US)
Structural Chemical Analysis
Characterization of Cerro Negro crude. Part II. Chemical analysis (Project sponsored by Bartlesville Energy Technology Center and Institute de Tecnologico del Venezolana Petroleo), 8:29056 (J:US)
Relative stability of cations and anions of conjugated polycyclic hydrocarbons, 8:30047 (J:US)
POLYETHERS
See POLYETHYLENE GLYCOLS
POLYETHYLENE GLYCOLS
Elasticity
Viscosity enhancement by molecular association complexes, 8:29950 (J:US)
Toxicity
Acute toxicity of polyethylene glycol p-isooctylphenol ether in Syrian hamsters exposed by inhalation or bronchopulmonary lavage, 8:30572 (J:US)
Viscosity
Viscosity enhancement by molecular association complexes, 8:29950 (J:US)
POLYETHYLENE OXIDES
See POLYETHYLENE GLYCOLS
POLYETHYLENES
Deuteron Reactions
Study and use of the ion beams formed in the Focus experiment, 8:30933 (TG:US)
POLY(ISOBUTYLENE OXIDE)

Education
Ionizing radiation 584 - student manual, 8:30495 (R:US)
Nonionizing radiation 583, 8:30583 (R:US)
PROFLAVINE
Genetic Effects
Sister chromatid exchange, DNA repair, and single-gene mutation, 8:30564 (J:US)
PROGRAM MANAGEMENT
Planning
Addendum to network analysis planning for project management: a Primer, 8:30998 (R:US)
PROGRAMMING
Limited to computer programming.
See also LINEAR PROGRAMMING
Modulation
Procedure implementation through demodulation and related tricks, 8:30990 (R:US)
PROJECT INDEPENDENCE EVALUATION SYSTEM
See FIES
PROJECT MANAGEMENT
See PROGRAM MANAGEMENT
PROMETHIUM 147
Lung Clearance
Dosimetry of internally deposited radionuclides in lung and its usefulness in predicting biological effects, 8:30498 (RA:US)
PROMOTERS
See also TUMOR PROMOTERS
Promoter modifications of catalytic activity and selectivity. Progress report, April 1, 1982-March 31, 1983, 8:29288 (R:US)
PROMPT GAMMA RADIATION
Radiation Detection
Prompt gamma-ray detectors for the measurement of neutron capture cross-sections, 8:30733 (RA:US)
PROPANE
Chemical Reaction Yield
Promoter modifications of catalytic activity and selectivity. Progress report, April 1, 1982-March 31, 1983, 8:29288 (R:US)
Thermodynamic Properties
Correlations for estimating critical constants, acentric factor, structure factor, and dipole moment for undefined fractions, 8:28831 (RA:US)
1-PROPANOL
See PROPANOLS
2-PROPANOL
See PROPANOLS
PROPANOLS
Thermal Conductivity
Thermal conductivity measurements and molecular association in a series of alcohol vapors: methanol, ethanol, isopropanol, and t-butanol (Temperature and pressure dependence), 8:29292 (J:US)
Thermodynamic Properties
Correlations for estimating critical constants, acentric factor, structure factor, and dipole moment for undefined fractions, 8:28831 (RA:US)
Thermodynamics
Thermal conductivity measurements and molecular association in a series of alcohol vapors: methanol, ethanol, isopropanol, and t-butanol (Temperature and pressure dependence), 8:29292 (J:US)
PROPANONE
See ACETONE
PROPELLANTS
Turbulent Flow
Dusty gas influences on transport in turbulent erosive propellant flow, 8:30134 (J:US)
PROPERTY MANAGEMENT
Program Management
Thefts of property: James Forrestal Building, 8:29729 (R:US)
Security
Thefts of property: James Forrestal Building, 8:29729 (R:US)
Theft
Thefts of property: James Forrestal Building, 8:29729 (R:US)
PROPHASE
See MITOSIS
PROPHYLAXIS
See PREVENTIVE MEDICINE
PROPORTIONAL COUNTERS
See also MULTIWIRE PROPORTIONAL CHAMBERS
Tritium monitoring within the reactor hall of a DT fusion reactor, 8:30908 (R:US)
Design
Soudan nucleon decay program, 8:30271 (R:US)
PROPYL ALCOHOLS
See PROPANOLS
PROTECTION (RADIATION)
See RADIATION PROTECTION
PROTECTIVE CLOTHING
Design
Protective supplied-breathing-air garment, 8:30111 (P:US)
PROTEINS
See also HISTONES
LIPOPROTEINS
METALLOTHIONEIN
Biosynthesis
Amplification of the uvrA gene product of Escherichia coli to 7% of cellular protein by linkage to the p/sub L/ promoter of pKC30, 8:30410 (J:US)
Physiology of thermophilic bacteria, 8:30451 (B:US)
Use of radioisotopes in quantitative studies of lung metabolism, 8:30442 (J:US)
PROTEOLIPIDS
See LIPOPROTEINS
PROTON BEAMS
Comparative Evaluations
How much thermal neutron flux is gained using deuterons instead of protons, 8:29280 (RA:US)
PROTON REACTIONS
Coherent Production
Study of the $^{3}He(p,\pi^{+})^{4}He$ reaction close to threshold, 8:30735 (R:FR)
Neutron Emission
Measured and calculated neutron yields for 100 MeV protons on thick targets of Pb and Li, 8:29279 (RA:US)
Spallation
Possible use of copper spallation reactions to measure high energy particle spectra in shielding experiments, 8:29282 (RA:US)
PROTON SPECTROMETERS
Coincidence Methods
Coincidence-type ion-electron converter detector for low-energy protons., 8:30292 (R:AT)
PROTON-ANTIPROTON INTERACTIONS
Colliding Beams
Some remarks on performance of very-high-energy colliders, 8:30253 (R:US)
Cross Sections
Charged particle multiplicity distribution in anti pp interactions at 22.4 GeV/c, 8:30671 (R:SU)
Diffraction Models
QCD diffraction: a critical phenomenon reflecting both confinement and chiral-symmetry breaking, 8:30709 (R:US)
Interactive Display Devices
Review of currently available high performance interactive graphics systems, 8:30295 (R:GB)

Pattern Recognition
Review of currently available high performance interactive graphics systems, 8:30295 (R:GB)
Scattering
Rapidity spectra in proton-proton and proton-antiproton scattering up to 540 GeV in a dual parton model, 8:30697 (R:FR)
PROTON-PROTON INTERACTIONS
Scattering
Rapidity spectra in proton-proton and proton-antiproton scattering up to 540 GeV in a dual parton model, 8:30697 (R:FR)
PROTONS
Energy Losses
Energy spectra of heavy fragments from the interaction of protons with communications materials, 8:30800 (J:US)
Nuclear Magnetic Resonance
Proton NMR and magnetic susceptibility study of TiCrsub(1.8)Hsub(x), 8:29891 (J:NL)
PSORALEN
Biological Effects
Psoralen-plus-light damage and repair in transforming DNA of Bacillus subtilis, 8:30524 (BA:US)
PUBLIC BUILDINGS
See also SHOPPING CENTERS
Bead Walls
Analysis of performance of the passive-solar-heated Patoka Nature Center, Birdseye, Indiana. Final project report, 8:29412 (R:US)
Direct Gain Systems
Analysis of performance of the passive-solar-heated Patoka Nature Center, Birdseye, Indiana. Final project report, 8:29412 (R:US)
Solar Water Heaters
Demonstration of a retrofit solar heating system on the Jemez Pueblo Civic Center, 8:29415 (R:US)
Trombe Walls
Demonstration of a retrofit solar heating system on the Jemez Pueblo Civic Center, 8:29415 (R:US)
PUBLIC HEALTH
Decision Making
Risk estimation and decision making: the health effects on populations of exposure to low levels of ionizing radiation, 8:30526 (J:US)
PUBLIC UTILITY REGULATORY POLICIES ACT
Avoided cost standard under PURPA, 8:29855 (R:US)
PUERTO RICO
Oceanography
Structure of the ocean off Punta Tuna, Puerto Rico in relation to OTEC, 8:29410 (RA:US)
PULMONARY CANCER
See CARCINOMAS
PULMONARY LAVAGE
See LUNGS
PULPS
See SLURRIES
PULSARS
Wave Propagation
Nonlinear mechanism of radiation generation in pulsar plasma, 8:30621 (R:SU:In Russian)
PULSATING VARIABLE STARS
Reviews
Delta Scuti variables. Lecture 6, 8:30614 (R:US)
PULSE CIRCUITS
Design
Low-noise pulse conditioner, 8:30151 (P:US)
Voltage Regulators
Regulator to control current sharing among parallel-connected power transistors, 8:30143 (R:US)
PULSE COMBUSTORS
Operation
Experimental gas-fired pulse-combustion studies, 8:30152 (R:US)
Testing
Experimental gas-fired pulse-combustion studies, 8:30152 (R:US)
PULSED MAGNET COILS
Magnetic Fields
Pulsed air-core deflector-magnet design parameters, 8:30224 (R:US)
PULVERIZED FUEL ASH
See FLY ASH
PUMPED STORAGE POWER PLANTS
Intake Structures
Analytic predictions of circulation and vortices at intakes. Final report, 8:29704 (R:US)
Water Reservoirs
Analytic predictions of circulation and vortices at intakes. Final report, 8:29704 (R:US)
PUMPS
See also CENTRIFUGAL PUMPS
ELECTROMAGNETIC PUMPS
Cavitation
Cavitation characterization by the acoustic method. Application to a pump model and to the primary pump of the Super Phenix fast reactor, 8:29580 (R:FR:In French)
Compressed Air
Pressure charged airlift pump, 8:30107 (P:US)
Design
High pressure coal slurry pumping with hydraulic exchange pumps, 8:28932 (BA:US)
Diffusers
Continuous-diffusion crossover-system design, 8:30100 (R:US)
Electric Motors
Application of the electronicaly controlled synchronous motor to slurry pipeline pumping, 8:28929 (BA:US)
Maintenance
Fosfertil phosphate pipeline: three years of operation, 8:28943 (BA:US)
Materials
Abrasiveness of fine grain particles in slurry machinery, 8:28952 (BA:US)
Packings
Testing of high temperature coal slurry pump packings, 8:28813 (R:US)
Service Life
Operating experience of the Black Mesa Pipeline, 8:28964 (BA:US)
Test Facilities
Coal-slurry pump development. Technical progress report No. 42, 8:28799 (R:US)
Washing
Plunger flush system (Development and testing of flushing system to keep slurry away from packing), 8:28931 (BA:US)
Wear
Abrasiveness of fine grain particles in slurry machinery, 8:28952 (BA:US)
PUREX PROCESS
Start-Up
Chemical processing monthly report, 8:29110 (R:US)
PURPA
See PUBLIC UTILITY REGULATORY POLICIES ACT
PWR TYPE REACTORS
See also ARKANSAS-2 REACTOR
LUCIE-2 REACTOR
MIDLAND-1 REACTOR
MIDLAND-2 REACTOR
MUTSU REACTOR
ROWE YANKEE REACTOR
SHIPPINGPORT REACTOR
SURRY-1 REACTOR
THREE MILE ISLAND-2 REACTOR
ATWS
LOFTRAN/RETRAN comparison calculations for a postulated loss of feedwater ATWS in the Sizewell B PWR, 8:29660 (RA:US)
Construction
US central station nuclear electric generating units: significant milestones. Status as of October 1, 1982, 8:29595 (R:US)
Containment Buildings
Scale-model tests of turbine missile containment by reinforced concrete. Final report, 8:29671 (R:US)

ECCS
First-order model for non-equilibrium ECC pressure suppression, 8:29635 (R:US)
Some applications of the moving finite element method to fluid flow and related problems, 8:29641 (R:US)
Thermal mixing in a model cold leg and downcomer at low flow rates, 8:29673 (R:US)
Two-phase-flow characteristics during reflooding of a hot vertical tube. Final report, 8:29672 (R:US)
Fuel Assemblies
Evaluation and demonstration of methods for improved nuclear-fuel utilization. Fifth semi-annual progress report, January 1-June 30, 1982, 8:29599 (R:US)
LOCA simulation in the National Research Universal reactor program: data report for the third materials experiment (MT-3), 8:29685 (R:US)
Qualification of the B and W Mark B fuel assembly for high burnup. Eighth semi-annual progress report, January-June 1982, 8:29557 (R:US)
Fuel Cans
Comparison of the high-temperature oxidation behavior of Zircaloy-4 and pure zirconium, 8:29568 (J:US)
Effect of hydrogen on the oxygen embrittlement of beta-quenched Zircaloy-4 fuel cladding, 8:29698 (J:US)
Effects of temperature and pressure on the in-reactor creepdown of Zircaloy fuel cladding, 8:29567 (J:US)
LOCA simulation in the National Research Universal reactor program: data report for the third materials experiment (MT-3), 8:29685 (R:US)
Fuel Cycle
Evaluation and demonstration of methods for improved nuclear-fuel utilization. Fifth semi-annual progress report, January 1-June 30, 1982, 8:29599 (R:US)
Reactors and fuel production, 8:29537 (R:US)
Fuel Element Failure
Effect of hydrogen on the oxygen embrittlement of beta-quenched Zircaloy-4 fuel cladding, 8:29698 (J:US)
Fuel Management
Evaluation and demonstration of methods for improved nuclear-fuel utilization. Fifth semi-annual progress report, January 1-June 30, 1982, 8:29599 (R:US)
Fuel Rods
Comparison of thermal behavior of different PWR fuel rod simulators for LOCA experiments, 8:29678 (R:DE)
Fuel-Performance-Improvement Program. Semiannual progress report, April-September 1982, 8:29540 (R:US)
Licensing applications and requirements of an ideal steady-state fuel-performance code. Final report, 8:29545 (R:US)
SPEAR-BETA fuel-performance code system. Volume 2 (revision 1). Part 1. Programmer's manuals. Part 2. User's manual, 8:29555 (R:US)
SPEAR-FCODE-GAMMA functional specifications. Final report, 8:29546 (R:US)
Fuel-Cladding Interactions
Effects of temperature and pressure on the in-reactor creepdown of Zircaloy fuel cladding, 8:29567 (J:US)
Legal Aspects
Licensee Event Report (LER) compilation: for month of March 1983, 8:29683 (R:US)
Loss of Coolant
Analysis of LOFT experiments on RETRAN-01, 8:29646 (RA:US)
Development of a generalized correlation for phase-velocity measurements obtained from impedance-probe pairs in two-phase flow systems, 8:29634 (R:US)
LOCA simulation in the National Research Universal reactor program: data report for the third materials experiment (MT-3), 8:29685 (R:US)
Non-condensible gas fraction predictions using wet and dry bulb temperature measurements, 8:29689 (R:US)
Probabilistic assessment of the primary coolant loop pipe fracture due to fatigue crack growth for a PWR plant, 8:29697 (J:NL)
RETRAN-02 comparison with Semiscale Test S-07-10B, 8:29645 (RA:US)
RETRAN analysis of PWR small break LOCA, 8:29655 (RA:US)
Some applications of the moving finite element method to fluid flow and related problems, 8:29641 (R:US)
Thermal mixing in a model cold leg and downcomer at low flow rates, 8:29673 (R:US)
Two-phase-flow characteristics during reflooding of a hot vertical tube. Final report, 8:29672 (R:US)
Materials Testing
Light water reactor and polymeric materials, 8:29549 (R:JP:In Japanese)
Neutron Dosimetry
Evaluation of personnel neutron dosimetry at operating nuclear power plants, 8:29565 (R:US)
Operation
Taking human error into account in the design of nuclear reactor centres, 8:29624 (R:AU)
Personnel
Evaluation of personnel neutron dosimetry at operating nuclear power plants, 8:29565 (R:US)
Neutron dosimetry at commercial nuclear plants. Final report of Subtask B: dosimeter response, 8:29551 (R:US)
Pipes
Piping seismic test with energy-absorbing devices. Final report, 8:29542 (R:US)
Planning
US central station nuclear electric generating units: significant milestones. Status as of October 1, 1982, 8:29595 (R:US)
Primary Coolant Circuits
Non-condensible gas fraction predictions using wet and dry bulb temperature measurements, 8:29689 (R:US)
Plant Materials Program: progress June 1981 to May 1982, 8:29541 (R:US)
Probabilistic assessment of the primary coolant loop pipe fracture due to fatigue crack growth for a PWR plant, 8:29697 (J:NL)
Thermal mixing in a model cold leg and downcomer at low flow rates, 8:29673 (R:US)
Two-phase jet loads, 8:29690 (R:US)
Reactor Accidents
Aerosol release and transport program. Quarterly progress report, October-December 1982, 8:29688 (R:US)
Calculational limitations in PWR system analysis, 8:29639 (R:US)
RETRAN's role in the development of northeast utilities analytical capabilities, 8:29651 (RA:US)
Review of solution approach, methods, and recent results of the RELAP5 system code, 8:29640 (R:US)
Winfrith studies of severe PWR pressurized faults, 8:29649 (RA:US)
Reactor Components
Two-phase jet loads, 8:29690 (R:US)
Reactor Licensing
Regulatory licensing status summary report. Nuclear power plants data for decisions (Blue Book), March 1-March 31, 1983, 8:29596 (R:US)
Reactor Materials
Fatigue performance of Ni-Cr-Fe Alloy 600 under typical PWR steam-generator conditions. Final report, 8:29561 (R:US)
Mechanistic aspects of stress-corrosion cracking of type 304 stainless steel in LWR systems, 8:29553 (R:US)
Plant Materials Program: progress June 1981 to May 1982, 8:29541 (R:US)
Reactor Operation
Reactor operating experiences, 1978-1980, 8:29550 (R:US)
US central station nuclear electric generating units: significant milestones. Status as of October 1, 1982, 8:29595 (R:US)
Reactor Operators
RETRAN analyses for improving plant procedures and operator training, 8:29654 (RA:US)
Reactor Safety
Licensee Event Report (LER) compilation: for month of March 1983, 8:29683 (R:US)
Long-range research plan, FY 1984-FY 1988, 8:29680 (R:US)
Safety research programs sponsored by Office of Nuclear Regulatory Research. Quarterly progress report, July 1-September 30, 1982, 8:29684 (R:US)

RHR Systems
Common cause evaluations in applied risk analysis of nuclear power plants, 8:29694 (R:US)
Safety
Taking human error into account in the design of nuclear reactor centres, 8:29624 (R:AU)
Specifications
Reactors and fuel production, 8:29537 (R:US)
Spent Fuel Casks
Shielding analysis on spent fuel transport cask by RADHEAT-V3 code system, 8:30101 (R:JP:In Japanese)
Spent Fuels
Fuel inventories and derived parameters for the reactor systems CDFR, LWR, AGR and MAGNOX, 8:29598 (R:GB)
Steam Generators
Analysis of steam-generator transients with RETRAN-02, 8:29658 (RA:US)
Diffusion and hideout in crevices. Final report, 8:29564 (R:US)
Fatigue performance of Ni-Cr-Fe Alloy 600 under typical PWR steam-generator conditions. Final report, 8:29561 (R:US)
Investigation of phosphate-sludge interactions. Final report, 8:29562 (R:US)
Primary-side deposits on PWR steam-generator tubes, 8:29563 (R:US)
RETRAN-02 analysis of a steam generator tube break incident, 8:29652 (RA:US)
Steam-generator tube-plugging and tube-sleeving criteria: assessment of current practices, 8:29559 (R:US)
Steam Systems
Plant Materials Program: progress June 1981 to May 1982, 8:29541 (R:US)
Steam Turbines
Scale-model tests of turbine missile containment by reinforced concrete. Final report, 8:29671 (R:US)
Transients
Conference proceedings: second international RETRAN conference, 8:29642 (R:US)
Exact analytic technique for three-dimensional to one-dimensional cross section collapsing, 8:29667 (RA:US)
Investigation of the one-dimensional reactor kinetics model in RETRAN-02 MOD-002, 8:29668 (RA:US)
Numerical solution method improvements for RETRAN, 8:29644 (RA:US)
PWR systems transient analysis, 8:29637 (R:US)
RETRAN-01/RETRAN-02 comparison calculations for PWR transients, 8:29659 (RA:US)
RETRAN-02 calculations of operational transients in LOFT, 8:29647 (RA:US)
RETRAN analyses for improving plant procedures and operator training, 8:29654 (RA:US)
RETRAN nonequilibrium two-phase flow model for operational transient analyses, 8:29643 (RA:US)

PYRANS
Chemical Radiation Effects
Thermally induced free-radical reactions in α-D-glucopyranose single crystals. An electron spin resonance-electron nuclear double resonance study (X-radiation), 8:30079 (J:US)

PYRENE
Fluorescence Spectroscopy
Identification and quantification of polynuclear aromatic compounds in synthoil by room-temperature phosphorimetry, 8:28836 (J:NL)
Thermodynamic Properties
Correlations for estimating critical constants, acentric factor, structure factor, and dipole moment for undefined fractions, 8:28831 (RA:US)

PYRIDINES
See also ACRIDINES
BIPYRIDINES
PYRIDINIUM COMPOUNDS
QUINOLINES
Phase Studies
Coexistence curve of 2,6-lutidine + water, near its lower critical point, 8:30059 (J:NL)
Radiolysis
Redox properties of free radicals, 8:30083 (J:US)
Refractivity
Coexistence curve of 2,6-lutidine + water, near its lower critical point, 8:30059 (J:NL)

PYRIDINIUM COMPOUNDS
Electrochemistry
Electrochemical studies of Fe(II) and Fe(III) in an aluminum chloride-butylpyridinium chloride ionic liquid, 8:30063 (RA:US)

PYRITE
Structural Chemical Analysis
Organic and pyritic sulfur determination in oil shale, 8:29074 (R:US)

PYRITES
See PYRITE

PYROCARBON
See PYROLYTIC CARBON

PYROCHLORE
$GdvTivO_6$.
Radiation Effects
Study of radiation effects in curium-doped $Gd_2Ti_2O_7$ (pyrochlore) and $CaZrTi_2O_7$ (zironolite), 8:29939 (BA:US)
Self-Irradiation
Study of radiation effects in curium-doped $Gd_2Ti_2O_7$ (pyrochlore) and $CaZrTi_2O_7$ (zironolite), 8:29939 (BA:US)

PYROLYSIS PRODUCTS
See also CHARS
Sampling
Fundamental pyrolysis studies. Annual report FY 1982, 8:29326 (R:US)

PYROLYTIC CARBON
Chemical Vapor Deposition
Evaluation of coated particle waste forms, 8:29199 (BA:US)
Fabrication
Method for fabricating thin films of pyrolytic carbon (Patent), 8:29945 (P:US)

PYRROLES
Molecular Weight
Characterization of Cerro Negro crude. Part I. Physical and chemical separations (Project shared by Bartlesville Energy Technology Center, US DOE, and Institute de Tecnologico del Venezolana Petroleo), 8:29055 (J:US)
Structural Chemical Analysis
Characterization of Cerro Negro crude. Part I. Physical and chemical separations (Project shared by Bartlesville Energy Technology Center, US DOE, and Institute de Tecnologico del Venezolana Petroleo), 8:29055 (J:US)

Q

QUADRUPOLE LINACS
Beam Dynamics
Errors in radio-frequency quadrupole structures, 8:30187 (R:US)
Operating characteristics of a 2.0-MeV RFQ, 8:30186 (R:US)
Design
Mechanical features of the ATS RFQ linear accelerator, 8:30171 (R:US)
Electrodes
Radio-frequency quadrupole vane-tip geometries, 8:30191 (R:US)
Performance
Operating characteristics of a 2.0-MeV RFQ, 8:30186 (R:US)

QUANTUM CHROMODYNAMICS
Color Model
Effect of scalar partons at short distances in unified theories with spontaneously broken colour symmetry, 8:30708 (R:IT)
Exchange Interactions
Higher order corrections for the running coupling constant of QCD and an effective potential of the one-gluon exchange in t- and s-channels, 8:30691 (R:SU)
Mathematical Operators
Renormalization and short-distance properties of gauge invariant gluonium and hadron operators, 8:30690 (R:SU)

QUANTUM FIELD THEORY
See also LATTICE FIELD THEORY
QUANTUM CHROMODYNAMICS
QUANTUM FLAVORDYNAMICS
YUKAWA NONLOCAL THEORY
New approach to quantum field theory and a spacetime quantization, 8:30724 (J:US)
QUANTUM FLAVORDYNAMICS
Chirality
Dimensional reduction and flavor chirality, 8:30720 (J:NL)
QUANTUM MECHANICS
Algebra
Schroedinger equation for non-associative quantum mechanics and No-Go theorem, 8:30831 (J:US)
Hamiltonian Function
Quantum mechanical Hamiltonian models of discrete processes that erase their own histories: application to Turing machines, 8:30987 (R:US)
Stochastic Processes
Reciprocity principle in stochastic quantum mechanics, 8:30821 (J:US)
QUARK MODEL
See also COLOR MODEL
Topological theory of electric charge, 8:30705 (J:NL)
Diffraction
Relativistic model of diffraction scattering, 8:30692 (R:SU:In Russian)
Glauber Theory
Relativistic model of diffraction scattering, 8:30692 (R:SU:In Russian)
QUARK-ANTIQUARK INTERACTIONS
Quantum Chromodynamics
Second order QCD corrections to qantiq-annihilation into a lepton pair at large transverse momentum, 8:30695 (R:DD)
QUARKS
Bound State
Study of diquark fragmentation into Λ and Y^{*+} nu n and nu p interactions, 8:30669 (R:US)
Detection
Could (+1/3e) stable particles be consistent with present observations. A search for fractionally charged particles with an all-electrostatic system, 8:30667 (R:US)
QUARTZ
Air Pollution
Quantitative determination of alpha-quartz in airbone dust samples by X-ray diffraction, 8:30334 (R:ES:In Spanish)
Biological Effects
Biochemical and cellular effects of inhalation exposure to oil shale dusts, 8:29081 (RA:US)
Inhalation
Biochemical and cellular effects of inhalation exposure to oil shale dusts, 8:29081 (RA:US)
X-Ray Diffraction
Quantitative determination of alpha-quartz in airbone dust samples by X-ray diffraction, 8:30334 (R:ES:In Spanish)
Reflection intensities of photons in the n-th diffraction order for crystal planes of quartz. LiF, Ge and Si, 8:29931 (R:SU:In Russian)
QUEENSLAND
Surface Mining
An integrated report on slope failure mechanisms at Goonyella - November 1976, 8:28905 (B:AU)
Sensitivity and back-analysis of translational failures in Goonyella highwalls, 8:28904 (B:AU)
QUINOLINES
Thermodynamic Properties
Correlations for estimating critical constants, acentric factor, structure factor, and dipole moment for undefined fractions, 8:28831 (RA:US)
QUINONES
See also ANTHRAQUINONES
VITAMIN K
Photolysis
Electron attachment to p-benzoquinone and photodetachment from benzoquinone anion in nonpolar solvents, 8:30080 (J:US)
Radiolysis
Electron attachment to p-benzoquinone and photodetachment from benzoquinone anion in nonpolar solvents, 8:30080 (J:US)
Redox properties of free radicals, 8:30083 (J:US)

Long-term high-level waste technology. Composite quarterly technical report, July-September 1982, 8:29126 (R:US)
Low- and intermediate-level waste management practices in Japan, 8:29187 (BA:US)
Low level and intermediate level wastes management practice in France, 8:29184 (BA:US)
Materials balance: scientific fundamentals for the quality assurance of vitrified waste, 8:29973 (BA:US)
Method of preparing nuclear wastes for transportation and interim storage, 8:29166 (P:US)
Microstructures and crystallization in simulated waste glasses, 8:29181 (BA:US)
Microstructure of Synroc, 8:29936 (BA:US)
New waste calcining facility at ICPP, 8:29211 (BA:US)
Recent advances in power plant radwaste volume reduction systems and end product characteristics, 8:29204 (BA:US)
Spray calcination of SRP waste compositions for ceramic waste forms, 8:29209 (BA:US)
Treatment of TRU wastes: recent results of developments underway in Germany, 8:29202 (BA:US)
Utilization of a drum drier for the conditioning of radioactive wastes, 8:29180 (BA:US)
Volume reduction and solidification of low radioactive and plutonium waste: technology and operation experience, 8:29203 (BA:US)
Strontium
Precipitation-adsorption process for the decontamination of nuclear waste supernates (Patent), 8:29172 (P:US)
Precipitation process for supernate decontamination, 8:29127 (R:US)

RADIOACTIVE WASTE STORAGE
High-Level Radioactive Wastes
High level waste management and characterization at the Hanford plant site, 8:29212 (BA:US)
Monitored retrievable storage of nuclear waste in the US, 8:29129 (R:US)
Radioactive waste management, 8:29245 (BA:SU:In Russian)
Intermediate-Level Radioactive Wastes
Canadian experience with the storage and disposal of low- and intermediate-level wastes, 8:29154 (RA:US)
Low- and intermediate-level waste management practices in Canada, 8:29186 (BA:US)
Low-Level Radioactive Wastes
Canadian experience with the storage and disposal of low- and intermediate-level wastes, 8:29154 (RA:US)
Low- and intermediate-level waste management practices in Canada, 8:29186 (BA:US)

RADIOACTIVE WASTES
See also ALPHA-BEARING WASTES
HIGH-LEVEL RADIOACTIVE WASTES
INTERMEDIATE-LEVEL RADIOACTIVE WASTES
LOW-LEVEL RADIOACTIVE WASTES
RADIOACTIVE EFFLUENTS
Leaching
Standard leach tests for nuclear waste materials, 8:29244 (BA:US)
Solubility
Radionuclide solubility and transport in basalt, 8:29171 (J:US)

RADIOACTIVITY TRANSPORT
Aerosol release and transport program. Quarterly progress report, October-December 1982 (Oak Ridge National Laboratory; PWR; BWR; LMFBR), 8:29688 (R:US)

RADIOBIOLOGICAL EFFECTS
See BIOLOGICAL RADIATION EFFECTS

RADIOFREQUENCY SYSTEMS
See RF SYSTEMS

RADIOISOTOPE BATTERIES
Specifications
Specification for strontium-90 500-watt(e) radioisotopic thermoelectric generator. Final report, 8:29284 (R:US)

RADIOISOTOPE GENERATORS
Fabrication
Validation of the sterile manufacture of the AAEC MARK III molybdenum-99/techtnetium-99m generator, 8:30084 (R:AU)
Technetium 99
Preparation of a sup(99m) Tc generator for use in nuclear medicine, using calcinated (1000°C) alumina as an adsorber for ^{99}Mo, 8:30445 (R:BR:In Portuguese)

RADIOISOTOPE HEAT SOURCES
Design
Specification for strontium-90 500-watt(e) radioisotopic thermoelectric generator. Final report, 8:29284 (R:US)

RADIOISOTOPE KINETICS
See RADIONUCLIDE KINETICS

RADIOISOTOPE MIGRATION
See RADIONUCLIDE MIGRATION

RADIOLOGICAL PERSONNEL
Radiation Doses
Personal monitoring and assessment of doses received by radiation workers, 8:30471 (R:AU)

RADIOLOGICAL PROTECTION
See RADIATION PROTECTION

RADIOMETERS
Design
Simplified techniques to study components of solar radiation under haze and clouds, 8:29298 (J:US)

RADIONUCLIDE DISTRIBUTIONS
See RADIONUCLIDE KINETICS

RADIONUCLIDE KINETICS
For radionuclides in living organisms only; see also TRANSLOCATION.
Data Acquisition Systems
SABRE: a computer-based system for the assessment of body radioactivity by photon spectrometry. Part 4., 8:30804 (R:GB)
Microprocessors
SABRE: a computer-based system for the assessment of body radioactivity by photon spectrometry. Part 4., 8:30804 (R:GB)

RADIONUCLIDE METABOLISM
See RADIONUCLIDE KINETICS

RADIONUCLIDE MIGRATION
In environment.
Environmental Effects
Uncertainty estimates for site-specific atmospheric diffusion parameters, 8:30346 (J:US)
Research Programs
Progress report, Health Sciences Division, 1 July - 30 September, 1981, 8:30803 (R:CA)

RADIONUCLIDE TRANSFER (IN ENVIRONMENT)
See RADIONUCLIDE MIGRATION

RADIONUCLIDE TRANSFER (IN ORGANISMS)
See RADIONUCLIDE KINETICS

RADIONUCLIDE TURNOVER
See RADIONUCLIDE KINETICS

RADIOPRESERVATION
Mutagen Screening
In vivo mutagenicity studies in rats mice and Chinese hamsters fed irradiated foodstuffs - chicken, fish, dates, pulses, mangoes and cocoa beans, 8:30452 (R:DE)

RADIOPROTECTIVE SUBSTANCES
Chemical Preparation
Synthesis of new prophylactic antiradiation drugs. Progress report no. 2 (annual), 1 Aug 80-31 Jul 81, 8:30038 (R:US)
RADIOSURGERY
See RADIOTHERAPY
RADIOTHERAPY
Side Effects
Chromosome aberrations in women treated by gamma-rays for breast carcinoma, 8:30484 (RA:DE)
Deoxyribonucleoside-urea and some immunological changes in postirradiation effects, 8:30490 (RA:DE)
RADIOTHORIUM
See THORIUM 228
RADIUM 226
Activity Levels
^{226}Ra and ^{228}Ra in drinking water, 8:30467 (RA:US)
Relative activities of ^{228}Ra and ^{226}Ra in early Illinois radium dial workers, 8:30466 (RA:US)
Chronic Exposure
Exposure data for radium patients, 8:30470 (RA:US)
Environmental Exposure Pathway
Radium-226 in drinking water and terrestrial food chains: a review of parameters and an estimate of potential exposure and dose, 8:30366 (R:US)
Health Hazards
Human health effects of radium: an epidemiologic perspective of research at Argonne National Laboratory, 8:30464 (RA:US)
Radiation Monitoring
Review of well-logging techniques, 8:30317 (R:US)
Radioecological Concentration
Hydrogeology of the Dakota Group aquifer with emphasis on the radium-226 content of its contained ground water, Canon City Embayment, Fremont and Pueblo Counties, Colorado, 8:30391 (R:US)
Radium-226 in drinking water and terrestrial food chains: a review of parameters and an estimate of potential exposure and dose, 8:30366 (R:US)
Research Programs
Radiological and Environmental Research Division, Center for Human Radiobiology. Annual report, July 1981-June 1982 (Lead Abstract), 8:30463 (R:US)
Sampling
An American scientist visits the Altamira cave in northern Spain, 8:30350 (J:US)
RADIUM 228
Activity Levels
^{228}Ra and ^{226}Ra in drinking water, 8:30467 (RA:US)
Relative activities of ^{228}Ra and ^{226}Ra in early Illinois radium dial workers, 8:30466 (RA:US)
Chronic Exposure
Exposure data for radium patients, 8:30470 (RA:US)
Health Hazards
Human health effects of radium: an epidemiologic perspective of research at Argonne National Laboratory, 8:30464 (RA:US)
Research Programs
Radiological and Environmental Research Division, Center for Human Radiobiology. Annual report, July 1981-June 1982 (Lead Abstract), 8:30463 (R:US)
RADIUM A
See POLONIUM 218
RADIUM C
See POLONIUM 214
RADON
Equilibrium
Some measurements of the equilibrium factor for radon daughters in houses, 8:30344 (RA:US)
Sampling
Instrumentation for collecting and measuring radon and its daughters, 8:30264 (RA:US)
Some measurements of the equilibrium factor for radon daughters in houses, 8:30344 (RA:US)
RADON 210
High Spin States
Yrast traps and high spin states in ^{210}Rn, 8:30765 (R:AU)
Yrast States
Yrast traps and high spin states in ^{210}Rn, 8:30765 (R:AU)
RADURIZATION
See RADIOPRESERVATION
RAILWAYS
Comparative Evaluations
Coal transportation: the economic alternatives, 8:28940 (BA:US)
Coalstream pipeline project, 8:28916 (BA:US)
Development of coal/liquid CO_2 slurry transportation: current status, 8:28939 (BA:US)
Environmental Impact Statements
Proposed Navajo Railroad Project. Final environmental impact statement, 8:30397 (R:US)
Fuel Substitution
Advanced locomotive heat engines, 8:29860 (R:US)
Heat Engines
Advanced locomotive heat engines, 8:29860 (R:US)
RAMAN SPECTRA
Measuring Instruments
Turbulent combustion experiments and modeling. Technical progress report, October 1, 1979-December 31, 1979, 8:30151 (R:US)
RANKINE CYCLE ENGINES
Capitalized Cost
Advanced locomotive heat engines, 8:29860 (R:US)
Technology Assessment
Advanced locomotive heat engines, 8:29860 (R:US)
RARE EARTHS

Absorption Spectroscopy
Rare earth aerosol analysis by atomic absorption spectrophotometry using electrothermal atomization, 8:30085 (RA:US)
Rare earth analysis in human biological samples by atomic absorption using electrothermal atomization, 8:30086 (RA:US)
Magnetic Susceptibility
Magnetic excitation damping in heavy rare earth metals, 8:29883 (R:SU:In Russian)
Magnons
Magnetic excitation damping in heavy rare earth metals, 8:29883 (R:SU:In Russian)
Radiochemical Analysis
Rare earth aerosol analysis by atomic absorption spectrophotometry using electrothermal atomization, 8:30085 (RA:US)
RATS
Leukemia
Hematologic and serum chemical characteristics of mononuclear leukemia in Fischer 344 rats, 8:30453 (J:US)
RAW MATERIALS
Cost
World energy crisis, 8:29766 (RA:US)
Global Aspects
World energy crisis, 8:29766 (RA:US)
Government Policies
World energy crisis, 8:29766 (RA:US)
RAYLEIGH WAVES
Wave Propagation
Application of metal single crystal wedges to high frequency Rayleigh wave propagation, 8:30138 (J:US)
RDF
See REFUSE DERIVED FUELS

REACTION INTERMEDIATES
Study of intermediates from transition metal excited-state electron-transfer reactions. Progress report, August 1, 1981-March 31, 1983, 8:29285 (R:US)

REACTOR ACCIDENTS
See also ATWS
FUEL ELEMENT FAILURE
LOSS OF COOLANT
LOSS OF FLOW
MELTDOWN
REACTOR CORE DISRUPTION

Environmental Impacts
Dispersion coefficients for coastal regions, 8:29692 (R:US)

Fission Product Release
Aerosol release and transport program. Quarterly progress report, October-December 1982 (Oak Ridge National Laboratory; PWR; BWR; LMFBR), 8:29688 (R:US)

Heat Transfer
Calculational limitations in PWR system analysis, 8:29639 (R:US)
Code portability and data management considerations in the SAS3D LMFBR accident-analysis code, 8:29626 (R:US)
Physics of reactor safety. Quarterly report, October-December 1982 (LMFBR; Argonne National Laboratory), 8:29687 (R:US)
RETRAN's role in the development of northeast utilities analytical capabilities (PWR), 8:29651 (RA:US)
Review of solution approach, methods, and recent results of the RELAP5 system code (PWR), 8:29640 (R:US)
Thermal-hydraulic posttest analysis for the ANL/MCTF 360° model heat-exchanger water test under mixed convection (LMFBR), 8:29632 (R:US)
Winfrith studies of severe PWR pressurized faults, 8:29649 (RA:US)

Hydraulics
Calculational limitations in PWR system analysis, 8:29639 (R:US)
Code portability and data management considerations in the SAS3D LMFBR accident-analysis code, 8:29626 (R:US)
Physics of reactor safety. Quarterly report, October-December 1982 (LMFBR; Argonne National Laboratory), 8:29687 (R:US)
RETRAN's role in the development of northeast utilities analytical capabilities (PWR), 8:29651 (RA:US)
Review of solution approach, methods, and recent results of the RELAP5 system code (PWR), 8:29640 (R:US)
Thermal-hydraulic posttest analysis for the ANL/MCTF 360° model heat-exchanger water test under mixed convection (LMFBR), 8:29632 (R:US)
Winfrith studies of severe PWR pressurized faults, 8:29649 (RA:US)

Radioactive Aerosols
Aerosol release and transport program. Quarterly progress report, October-December 1982 (Oak Ridge National Laboratory; PWR; BWR; LMFBR), 8:29688 (R:US)

Radioactivity Transport
Aerosol release and transport program. Quarterly progress report, October-December 1982 (Oak Ridge National Laboratory; PWR; BWR; LMFBR), 8:29688 (R:US)

REACTOR CELLS
Heterogeneous Effects
Heterogeneity effects in Masurca rodlet cells, 8:29610 (R:FR)

REACTOR COMPONENTS

RHR SYSTEMS

Hydrodynamics
BLAZER: a RELAP5/MODI post processor to generate force-time history input data for structural computer codes, 8:29701 (J:US)
Effect of elbow translations on pressure transient analysis of piping systems, 8:29592 (J:US)

Transients
Effect of elbow translations on pressure transient analysis of piping systems, 8:29592 (J:US)

Two-Phase Flow
Simulation of thermal transient induced pipe flow stratification using COMMIX-2, 8:29613 (J:US)

REACTOR CORE DISRUPTION
Heat Transfer
Hydrodynamic and thermal modeling of solid particles in a multi-phase, multi-component flow (LMFBR), 8:29636 (R:US)
Status of core-debris coolability experiments with real and simulant materials at Argonne National Laboratory (LMFBR), 8:29630 (R:US)

Hydraulics
Hydrodynamic and thermal modeling of solid particles in a multi-phase, multi-component flow (LMFBR), 8:29636 (R:US)
Status of core-debris coolability experiments with real and simulant materials at Argonne National Laboratory (LMFBR), 8:29630 (R:US)

REACTOR CORES
See also HETEROGENEOUS REACTOR CORES

Burnup
Extended Fuel-Burnup Program: cold critical measurement performed before Cycle 8 startup at Monticello reactor, 8:29539 (R:US)

Creep
Irradiated materials measurement technology, 8:29914 (J:US)

Criticality
Extended Fuel-Burnup Program: cold critical measurement performed before Cycle 8 startup at Monticello reactor, 8:29539 (R:US)

Heat Transfer
Analysis of density-wave oscillations in ventilated channels (BWR;MAZDA-1F code;MAZDA-4S;MAZDA-4F code), 8:29552 (R:US)
Integrated Compartment Method appication to the transient heat transfer in gas-cooled reactor, 8:29569 (R:US)

Hydraulics
Analysis of density-wave oscillations in ventilated channels (BWR;MAZDA-1F code;MAZDA-4S;MAZDA-4F code), 8:29552 (R:US)

Neutron Flux
DIF3D nodal neutronics option for two- and three-dimensional diffusion theory calculations in hexagonal geometry (LMFBR), 8:29574 (R:US)
Extended Fuel-Burnup Program: cold critical measurement performed before Cycle 8 startup at Monticello reactor, 8:29539 (R:US)

Physical Radiation Effects
Irradiated materials measurement technology, 8:29914 (J:US)
Power Density
Dynamic behavior of homogeneous and heterogeneous LMFBR core-design concepts, 8:29584 (R:US)
Reactivity Coefficients
DIF3D nodal neutronics option for two- and three-dimensional diffusion theory calculations in hexagonal geometry (LMFBR), 8:29574 (R:US)
Dynamic behavior of homogeneous and heterogeneous LMFBR core-design concepts, 8:29584 (R:US)
Reactor Kinetics
Dynamic behavior of homogeneous and heterogeneous LMFBR core-design concepts, 8:29584 (R:US)
HTGR Plant Technology Program. Semiannual report for the period ending September 24, 1982, 8:29571 (R:US)
Supports
Integrated compartment method application to the transient heat transfer in gas-cooled reactor, 8:29573 (R:US)
Two-Phase Flow
Analysis of density-wave oscillations in ventilated channels (BWR;MAZDA-1F code;MAZDA-4S;MAZDA-4F code), 8:29552 (R:US)

REACTOR KINETICS
DIF3D nodal neutronics option for two- and three-dimensional diffusion theory calculations in hexagonal geometry (LMFBR), 8:29574 (R:US)

REACTOR MATERIALS
To be assigned in conjunction with the specific descriptor for the material used in a reactor, provided this descriptor is not yet up-posted to reactor materials.
Compression Strength
Finite-element treatment of concrete cracking and thermal structural analysis (LMFBR), 8:29583 (R:US)
Corrosion
Integrated compartment method application to the transient heat transfer in gas-cooled reactor, 8:29573 (R:US)
Cracks
Effects of neutron irradiation on fatigue and creep-fatigue crack propagation in type 316 stainless steel at 649 degree C produced no significant effect on the crack propagation rate when compared with unirradiated steel tested at 649 degree C, 8:29905 (J:US)
Fatigue
Effects of neutron irradiation on fatigue and creep-fatigue crack propagation in type 316 stainless steel at 649 degree C produced no significant effect on the crack propagation rate when compared with unirradiated steel tested at 649 degree C, 8:29905 (J:US)
Fatigue performance of Ni-Cr-Fe Alloy 600 under typical PWR steam-generator conditions. Final report, 8:29561 (R:US)
Fracture Mechanics
Weld residual-stress redistribution near growing cracks. Final report (BWR), 8:29548 (R:US)
Fracture Properties
Finite-element treatment of concrete cracking and thermal structural analysis (LMFBR), 8:29583 (R:US)
Materials Testing
Light water reactor and polymeric materials, 8:29549 (R:JP:In Japanese)
Performance Testing
Fatigue performance of Ni-Cr-Fe Alloy 600 under typical PWR steam-generator conditions. Final report, 8:29561 (R:US)
Physical Radiation Effects
Effects of neutron irradiation on fatigue and creep-fatigue crack propagation in type 316 stainless steel at 649 degree C produced no significant effect on the crack propagation rate when compared with unirradiated steel tested at 649 degree C, 8:29905 (J:US)
Gamma prime coarsening and redistribution in nimonic PE16, 8:29911 (J:US)
Irradiation-induced precipitation in binary palladium-refractory metal alloys (400-KeV protons), 8:29912 (J:US)
Point-defect clustering in the presence of mobile helium and immobile traps, 8:29909 (J:US)
Study of radiation damage produced in thinned specimens of 316 stainless steel by energetic helium ions, 8:29913 (J:US)
Swelling in reactor-conditioned nickel-ion irradiated nimonic PE16 (Neutron irradiation and nickel-ion irradiation), 8:29910 (J:US)
Tensile properties of neutron-irradiated Nimonic PE16, 8:29904 (J:US)
Radiation Effects
Reduction of irradiation-induced creep and swelling in AISI 316 by compositional modifications, 8:29915 (J:US)
Reactor Cores
HTGR Plant Technology Program. Semiannual report for the period ending September 24, 1982, 8:29571 (R:US)
Research Programs
Progress report, Chemistry and Materials Division, 1 April - 30 June, 1981, 8:30807 (R:CA)
Stress Corrosion
Mechanistic aspects of stress-corrosion cracking of type 304 stainless steel in LWR systems, 8:29553 (R:US)
Plant Materials Program: progress June 1981 to May 1982 (PWR; BWR), 8:29541 (R:US)
Weld residual-stress redistribution near growing cracks. Final report (BWR), 8:29548 (R:US)
Tensile Properties
HTGR Plant Technology Program. Semiannual report for the period ending September 24, 1982, 8:29571 (R:US)
Tensile properties of neutron-irradiated Nimonic PE16, 8:29904 (J:US)
Thermal Stresses
Integrated compartment method application to the transient heat transfer in gas-cooled reactor, 8:29573 (R:US)
Wear
HTGR Plant Technology Program. Semiannual report for the period ending September 24, 1982, 8:29571 (R:US)

REACTOR OPERATORS
Behavior
Taking human error into account in the design of nuclear reactor centres, 8:29624 (R:AU)
Chromosomal Aberrations
Chromosome aberrations in lymphocytes of workers of nuclear power plants, 8:30483 (RA:DE)
Training
RETRAN analyses for improving plant procedures and operator training (PWR; BWR), 8:29654 (RA:US)

REACTOR PHYSICS
Use only for indexing articles of very broad coverage, such as annual reviews, text book, etc.
Research Programs
Neutron spectroscopy. Final report, 8:30775 (R:US)

Impact of ocean transportation and ports on the marketing of Alaskan coal in the Pacific Rim, 8:28908 (RA:US)
RESEARCH PROGRAMS
To be used jointly with descriptor(s) for subject field and/or organization concerned.
Grants
Federal funds for research and development, Fiscal years 1979, 1980, and 1981. Volume XXIX. Detailed statistical tables, 8:29758 (R:US)
RESEARCH REACTORS
See also R-2 REACTOR

R3-0 REACTOR
Fuel Plates
French LEU fuel for research reactor with emphasis on the Osiris experience of core conversion and reactor operation with the new fuel, 8:29622 (R:FR)
RESERVOIR FLUIDS
Phase Transformations
Lumped-component characterization of crude oils for compositional simulation, 8:29009 (J:US)
RESERVOIR ROCK
Compression Strength
Pre-test geological and geochemical evaluation of the Caprock, St. Peter Sandstone and formation fluids, Yakley Field, Pike County, Illinois, 8:29517 (R:US)
Dissolution
Dissolution effects of CO_2-brine systems on the permeability of UK and North Sea calcareous sandstones, 8:29005 (J:US)
Geochemistry
Pre-test geological and geochemical evaluation of the Caprock, St. Peter Sandstone and formation fluids, Yakley Field, Pike County, Illinois, 8:29517 (R:US)
Lithology
Pre-test geological and geochemical evaluation of the Caprock, St. Peter Sandstone and formation fluids, Yakley Field, Pike County, Illinois, 8:29517 (R:US)
Mineralogy
Pre-test geological and geochemical evaluation of the Caprock, St. Peter Sandstone and formation fluids, Yakley Field, Pike County, Illinois, 8:29517 (R:US)
Oil Saturation
Magnitude and detailed structure of residual oil saturation, 8:28988 (J:US)
Permeability
Pre-test geological and geochemical evaluation of the Caprock, St. Peter Sandstone and formation fluids, Yakley Field, Pike County, Illinois, 8:29517 (R:US)
Porosity
Pre-test geological and geochemical evaluation of the Caprock, St. Peter Sandstone and formation fluids, Yakley Field, Pike County, Illinois, 8:29517 (R:US)
RESERVOIRS (WATER)
See WATER RESERVOIRS
RESIDENCES
See HOUSES
RESIDENTIAL BUILDINGS
See also HOUSES
Energy Audits
Overview of national residential and small commercial energy-conservation programs, 8:29803 (R:US)
Heating Systems
Evaluation and assessment of thermal-energy storage for residential heating, 8:29705 (R:US)
RESIDENTIAL SECTOR
Energy Demand
Model of interfuel and capital-fuel substitution by consumers. Technical report SOL 78-22, 8:29741 (R:US)
RESIDUAL FUEL OIL
See RESIDUAL FUELS
RESIDUAL FUELS
Prices
Monthly petroleum product price report, 8:29050 (R:US)
RESIDUAL HEAT REMOVAL
See RHR SYSTEMS
RESIDUES (RADIOACTIVE)
See RADIOACTIVE WASTES
RESIDUUMS
See RESIDUAL FUELS
RESONANCE CAVITIES
See CAVITY RESONATORS
RESPIRABLE DUSTS
See DUSTS
RESTRAINTS
Spring bypass assembly (LMFBR; Patent), 8:29590 (P:US)
RESUSPENSION
See PARTICLE RESUSPENSION
RETENTION FUNCTIONS
Mathematical Models
Retention of relatively insoluble particles inhaled by dogs, rats and mice, 8:30504 (RA:US)
RETINA
Biological Effects
Basal body and striated rootlet changes in primate macular retinal pigmented epithelium after low level diffuse argon laser radiation. Final report 1981-1982, 8:30580 (R:US)
RETORTED SHALES
See SPENT SHALES
RETORTING
See also IN-SITU RETORTING
Waste Water
Processing needs and methodology for contaminated water streams from synfuels processes (Low-temperature coal gasification, direct coal liquefaction and oil shale retorting processes), 8:28866 (R:US)
RETORTS
Characterization of in-situ oil-shale retorts prior to ignition, 8:29070 (P:US)
Bench-Scale Experiments
Laboratory-scale retort, 8:29068 (RA:US)
Design
Investigation of the geokinetics horizontal in-situ oil-shale retorting process. Sixth annual report, 1982, 8:29067 (R:US)
Laboratory-scale retort, 8:29068 (RA:US)
REVEGETATION
Comparative Evaluations
Self-revegetation of disturbed ground in the deserts of Nevada and Washington, 8:30354 (J:US)
REVERSE-FIELD PINCH
Initial reversed-field pinch experiments on ZT-40 and recent advances in RFP theory, 8:30879 (BA:XA)
Plasma Simulation
Zero-dimensional simulations of reversed-field pinch experiments, 8:30871 (J:AT)
RF SYSTEMS
Biological Effects
The influence of radiofrequency/microwave energy absorption on physiological regulation, 8:30585 (J:GB)
Performance Testing
Performance tests of the 600-kW, cw, 80-MHz, radio-frequency systems for the FMIT accelerator, 8:30232 (R:US)
RHENIUM
Catalytic Effects
Rhenium: an ammonia synthesis catalyst, 8:30010 (J:US)
Neutron Reactions
Fast-neutron capture-cross-section measurements with the Argonne National Laboratory large-liquid-scintillator tank, 8:30752 (RA:US)
RHENIUM CHLORIDES
Electronic Structure
Electronic states of the quadruply bonded $Re_2Cl_8^{2-}$ species: an ab initio theoretical study, 8:30003 (J:US)
RHENIUM COMPOUNDS
Catalytic Effects
A general homogeneous catalytic method for the homologation of methanol to ethanol, 8:29291 (J:US)
RHODAMINES
Decay Amplitudes
Viscosity dependence of the rotational reorientation of rhodamine B in mono- and polyalcohols. Picosecond transient grating experiments, 8:30043 (J:US)
Rotational States
Viscosity dependence of the rotational reorientation of rhodamine B in mono- and polyalcohols. Picosecond transient grating experiments, 8:30043 (J:US)
RHODIUM COMPLEXES
Electron Transfer
Study of intermediates from transition metal excited-state electron-transfer reactions. Progress report, August 1, 1981-March 31, 1983, 8:29285 (R:US)
Molecular Structure
Metallocarboranes structurally engineered for the reduction of carbon monoxide, 8:28793 (R:US)

Metallocarboranes structurally engineered for the reduction of carbon monoxide, 8:28792 (R:US)

Reaction Intermediates

Study of intermediates from transition metal excited-state electron-transfer reactions. Progress report, August 1, 1981-March 31, 1983, 8:29285 (R:US)

Synthesis

Metallocarboranes structurally engineered for the reduction of carbon monoxide, 8:28793 (R:US)

Metallocarboranes structurally engineered for the reduction of carbon monoxide, 8:28792 (R:US)

Testing

Metallocarboranes structurally engineered for the reduction of carbon monoxide, 8:28792 (R:US)

RHODIUM OXIDES

Chemical Reactions

Interaction of CO, CO_2, and D_2 with rhodium oxide: its reduction and catalytic stability, 8:30007 (J:US)

Sorptive Properties

Interaction of CO, CO_2, and D_2 with rhodium oxide: its reduction and catalytic stability, 8:30007 (J:US)

RHR SYSTEMS

HTGR Plant Technology Program. Semiannual report for the period ending September 24, 1982, 8:29571 (R:US)

Failures

Common cause evaluations in applied risk analysis of nuclear power plants (PWR), 8:29694 (R:US)

Heat Pipes

Passive heat-transfer means for nuclear reactors (Patent; LMFBR), 8:29589 (P:US)

Heat Transfer

SASSYS LMFBR systems analysis code, 8:29633 (R:US)

Hydraulics

SASSYS LMFBR systems analysis code, 8:29633 (R:US)

Risk Assessment

Common cause evaluations in applied risk analysis of nuclear power plants (PWR), 8:29694 (R:US)

RIBONUCLEIC ACID

See RNA

RIGHTS-OF-WAY

Comparative Evaluations

Computer assisted data analysis of slurry pipeline route selection, 8:28937 (BA:US)

RINGOTRON

See ELECTRON-RING ACCELERATORS

RINGS (STORAGE)

See STORAGE RINGS

RIO BLANCO OIL SHALE PROJECT

Process Solutions

Mutagenicity of various oil shale retort process waters in the Ames/Salmonella bioassay, 8:29083 (RA:US)

RISER CRACKING

See COAL LIQUEFACTION

RIVERS

See also SAVANNAH RIVER

Carbon Cycle

Transport of organic carbon to the oceans by rivers of North America: a synthesis of existing data, 8:30384 (J:SE)

RIVETING

See FASTENING

RIVETS

See FASTENERS

RNA

Biosynthesis

Physiology of thermophilic bacteria, 8:30451 (B:US)

Use of radioisotopes in quantitative studies of lung metabolism, 8:30442 (J:US)

RNA POLYMERASE

See RNA

ROADWAYS (MINES)

See MINE ROADWAYS

ROCK SALT

See SALT DEPOSITS

ROCKETS

Servomechanisms

Fracture tolerance analysis of the solid rocket booster servo-actuator for the space shuttle, 8:29898 (J:US)

ROCKS

See also IGNEOUS ROCKS
METAMORPHIC ROCKS
SYNTHETIC ROCKS

Tensile Properties

Method and apparatus for determining tensile strength, 8:30604 (P:US)

ROCKWELL FLASH HYDROLIEUEFACTION PROCESS

See CS-R PROCESS

ROCKY FLATS PLANT

Radioactive Waste Facilities

New aqueous waste treatment facility at Rocky Flats, 8:29207 (BA:US)

Radioactive Waste Processing

New aqueous waste treatment facility at Rocky Flats, 8:29207 (BA:US)

ROD BUNDLES

Mechanical Vibrations

Acoustic loading effects on oscillating rod bundles, 8:30098 (R:US)

RODS (FUEL)

See FUEL RODS

ROMANIA

Oil Fields

Development of the in-situ combustion process on an industrial scale at Videle field, Rumania, 8:29024 (J:US)

Enhanced oil recovery in Rumania, 8:29016 (J:US)

ROOF BOLTS

Optimization

Pre-tensioning rock bolts, 8:28901 (B:AU)

ROOSEVELT HOT SPRINGS

Geothermal Exploration

Milford geothermal No. 1, Roosevelt Hot Springs KGRA, 8:29430 (RA:US)

Resource Development

Milford geothermal No. 1, Roosevelt Hot Springs KGRA, 8:29430 (RA:US)

ROOTS

Plant Growth

Nitrogen-nutritional strategies of plants, in natural ecosystems and in agriculture, 8:30456 (RA:US)

ROTARY SEPARATOR TURBINES

Performance Testing

Wellhead power production with a rotary separator turbine, 8:29451 (RA:US)

ROTATING GENERATORS

Electrical Properties

Determination of saturated values of rotating machinery incremental and apparent inductances by an energy perturbation method, 8:29521 (BA:US)

ROTORS

See also DARRIEUS ROTORS
TIPVANE ROTORS

Fatigue

Torsional fatigue life of power-plant-shaft material. Final report, Task I, 8:29498 (R:US)

Power Losses

Special losses in rotors of electronically commutate brushless dc motors induced by non-uniformly rotating armature MMFS, 8:29522 (BA:US)

Stress Analysis

Torsional fatigue life of power-plant-shaft material. Final report, Task I, 8:29498 (R:US)

ROWE YANKEE REACTOR

After-Heat Removal

RETRAN-02 analysis of upper head cooling during controlled natural circulation cooldown of Yankee Nuclear Power Station, 8:29656 (RA:US)

Loss of Flow

RETRAN-02 analysis of upper head cooling during controlled natural circulation cooldown of Yankee Nuclear Power Station, 8:29656 (RA:US)

RUBIDIUM

Membrane Transport

Transport of alkali metal cations across liquid membranes by crown ether carboxylic acids, 8:29995 (J:NL)

Separation Processes
Transport of alkali metal cations across liquid membranes by crown ether carboxylic acids, 8:29995 (J:NL)
RUBIDIUM CHLORIDES
Thermodynamic Properties
Some thermodynamic properties of molten binary mixtures of alkaline-earth and alkali-metal chlorides, 8:30036 (TJ:US)
RUBIDIUM COMPLEXES
Chemical Reactions
Nuclear, electronic, and frequency factors in electron-transfer reactions, 8:30014 (J:US)
RUM JUNGLE PROJECT
Solid Wastes
Microbial ecology of Rum Jungle, III. Leaching behaviour of sulphidic waste material under controlled conditions, 8:30378 (R:AU)
RUMANIA
See ROMANIA
RUMEN
See RUMINANTS
RUMINANTS
See also DEER
Contamination
Investigation of radionuclide concentrations in tissues of elk utilizing Los Alamos National Laboratory lands, 8:30364 (RA:US)
Diet
Comparative winter nutrition of elk in the Jemez Mountains, New Mexico, 8:29444 (RA:US)
Migration
Biotelemetry studies on Elk-updates, 8:30351 (RA:US)
Nutrition
Physiologic response of elk to variations in winter range quality, 8:30455 (RA:US)
Physiology
Physiologic response of elk to variations in winter range quality, 8:30455 (RA:US)
Population Dynamics
Biotelemetry studies on Elk-updates, 8:30351 (RA:US)
Nutritional ecology of elk at the LA/NERP, 8:30352 (RA:US)
RUSSELLVILLE-2 ARKANSAS REACTOR
See ARKANSAS-2 REACTOR
RUTHENIUM 101 TARGET
Neutron Reactions
Status of recent fast capture cross section evaluations for important fission product nuclides, 8:30756 (RA:US)
RUTHENIUM 102 TARGET
Neutron Reactions
Status of recent fast capture cross section evaluations for important fission product nuclides, 8:30756 (RA:US)
RUTHENIUM 103 TARGET
Neutron Reactions
Status of recent fast capture cross section evaluations for important fission product nuclides, 8:30756 (RA:US)
RUTHENIUM COMPLEXES
Electron Transfer
Excited-state redox properties of ruthenium(II) phthalocyanine from electron-transfer quenching, 8:30067 (J:US)
Molecular Structure
Metallocarboranes structurally engineered for the reduction of carbon monoxide, 8:28793 (R:US)
Metallocarboranes structurally engineered for the reduction of carbon monoxide, 8:28792 (R:US)
Photolysis
Visible light photolysis of tris(bipyridine)ruthenium(II)-titanium(II) solutions, 8:30070 (J:NL)
Synthesis
Metallocarboranes structurally engineered for the reduction of carbon monoxide, 8:28793 (R:US)
Metallocarboranes structurally engineered for the reduction of carbon monoxide, 8:28792 (R:US)
RUTHENIUM OXIDES
Catalytic Effects
Transition-metal-oxide coated titanium electrodes for redox batteries. Final report, 8:29787 (R:US)

SHOCK ABSORBERS
Performance Testing
Piping seismic test with energy-absorbing devices. Final report (PWR; BWR), 8:29542 (R:US)
SHOPPING CENTERS
Photovoltaic Power Supplies
Intermediate photovoltaic system application experiment operational performance report for Lovington Square Shopping Center, Lovington, New Mexico for December 1982, 8:29341 (R:US)
SHOWER COUNTERS
Detects high energy gamma radiation or high energy particles on basis of cascade showers in layered absorbers.
Calibration
Development and performance of a calibration system for a large calorimeter array, 8:30273 (R:US)
Design
Calorimetry design for high-energy particle detection, 8:30298 (J:US)
SIALON
See ALUMINIUM OXIDES
SILICON NITRIDES
SIGMA-410 RESONANCES
Lagrangian Function
U(1)-problem, THETA-term and CP-violation, 8:30686 (R:SU)
SILICA
Catalytic Effects
Promoter modifications of catalytic activity and selectivity. Progress report, April 1, 1982-March 31, 1983, 8:29288 (R:US)
Study of Fischer-Tropsch synthesis through the use of surface intermediate scavengers. Progress report, August 1, 1982-April 1, 1983, 8:29287 (R:US)
Physical Radiation Effects
Structural effects of radiation damage in silica based glasses, 8:29975 (BA:US)
SILICON
Atom Collisions
Long range interaction between a He atom and a semiconductor surface, 8:30658 (J:NL)
Charged-Particle Transport
Muonium in ultra-pure germanium, 8:30792 (J:US)
Crystal Defects
Analysis of defect structure in silicon: characterization of Semix material. Silicon sheet growth development for the Large Area Silicon Sheet Task of the Low-Cost Solar Array Project. Final report, 8:29305 (R:US)
Crystal Doping
Recrystallization of amorphous and small-grain-size polycrystalline silicon. Final report, July 1979-July 1980, 8:29310 (R:XE)
Crystal Growth
Large-area sheet task: advanced dendritic web growth development. Quarterly report, October 23, 1982-December 31, 1982, 8:29306 (R:US)
Crystal-Phase Transformations
H-Division. Materials Physics quarterly report, October-December 1982, 8:29888 (R:US)
Deformation
Recrystallization of amorphous and small-grain-size polycrystalline silicon. Final report, July 1979-July 1980, 8:29310 (R:XE)
Electroplating
Process for producing silicon (Patent), 8:29333 (P:US)
Ion Implantation
Ion implantation of glow-discharge amorphous silicon and possible application to solar-cell devices. Final report, 8:29314 (R:XE)
Lattice Vibrations
Vibrational frequencies via frozen phonons, 8:29982 (J:FR)
Magnetic Resonance
Muonium in ultra-pure germanium, 8:30792 (J:US)
Muon Probes
Temperature dependence of the hyperfine parameters of anomalous muonium in germanium, 8:29960 (J:US)
Muonium
Screening of impurities in semiconductors: muonium in germanium, silicon and diamond, 8:29962 (J:US)
Temperature dependence of the anomalous muonium hyperfine interaction and depolarization rate in silicon, 8:30654 (J:US)
Temperature dependence of the hyperfine parameters of anomalous muonium in germanium, 8:29960 (J:US)
Muons
Characteristics of muon states in silicon, 8:29963 (J:US)
Physical Radiation Effects
Energy spectra of heavy fragments from the interaction of protons with communications materials, 8:30800 (J:US)
Recrystallization
Recrystallization of amorphous and small-grain-size polycrystalline silicon. Final report, July 1979-July 1980, 8:29310 (R:XE)
Research Programs
Process research on polycrystalline-silicon material (PROPSM). Quarterly report No. 6, March 1-June 30, 1982, 8:29307 (R:US)
Thermal Stresses
Large-area sheet task: advanced dendritic web growth development. Quarterly report, October 23, 1982-December 31, 1982, 8:29306 (R:US)
X-Ray Diffraction
Reflection intensities of photons in the n-th diffraction order for crystal planes of quartz. LiF, Ge and Si, 8:29931 (R:SU:In Russian)
SILICON 28 REACTIONS
Many-Nucleon Transfer Reactions
Orbiting in collisions between light heavy ions (A/sub T/ + A/sub P/ < 50), 8:30736 (R:US)
SILICON ALLOYS
Physical Radiation Effects
Point-defect clustering in the presence of mobile helium and immobile traps, 8:29909 (J:US)
Point Defects
Point-defect clustering in the presence of mobile helium and immobile traps, 8:29909 (J:US)
SILICON CARBIDES
Chemical Vapor Deposition
Evaluation of coated particle waste forms, 8:29199 (BA:US)
Production
Method of producing novel silicon carbide articles (Patent application), 8:29935 (P:US)
Synthesis
AR and TD Fossil Energy Materials Program. Quarterly progress report for the period ending December 31, 1982, 8:28814 (R:US)
SILICON COMPOUNDS
See also SILANES, SILOXANES and SILICONES.
See also SILICON CARBIDES
SILICON NITRIDES
Chemical Bonds
Silicon-carbon double bond: a healthy rivalry between theory and experiment, 8:30015 (J:US)
Chemical Preparation
Silicon-carbon double bond: a healthy rivalry between theory and experiment, 8:30015 (J:US)
SILICON IONS
Ion Sources
Ion-source development at Argonne, 8:30633 (R:US)
SILICON NITRIDES
Synthesis
AR and TD Fossil Energy Materials Program. Quarterly progress report for the period ending December 31, 1982, 8:28814 (R:US)
SILICON SOLAR CELLS
Electric Contacts
Development of metallization process: FSA project, cell and module formation research area. Quarterly technical progress report for the period ending December 31, 1982, 8:29308 (R:US)
Electrical Properties
Recrystallization of amorphous and small-grain-size polycrystalline silicon. Final report, July 1979-July 1980, 8:29310 (R:XE)
Fabrication
Thin-film amorphous silicon solar cells, 8:29311 (R:XE)

Inspection
Optical-diffraction method for determining crystal orientation, 8:29334 (P:US)
Performance
Thin-film amorphous silicon solar cells, 8:29311 (R:XE)
Research Programs
Process research on polycrystalline-silicon material (PROPSM). Quarterly report No. 6, March 1-June 30, 1982, 8:29307 (R:US)

SILVER
Carbon 12 Reactions
Disintegration of Nuclei in Violent Heavy Ion Interactions at 55A MeV - 110A MeV, 8:30760 (R:SE)
Diffusion
Laboratory measurements of contaminant attenuation of uranium mill tailings leachates by sediments and clay liners, 8:29249 (R:US)
Heavy Ion Reactions
Disintegration of Nuclei in Violent Heavy Ion Interactions at 55A MeV - 110A MeV, 8:30760 (R:SE)
Ion Collisions
Disintegration of Nuclei in Violent Heavy Ion Interactions at 55A MeV - 110A MeV, 8:30760 (R:SE)
Ion-Molecule Collisions
Studies of the structure and bonding of inorganic clusters, 8:30023 (J:NL)
Neutron Reactions
Fast-neutron capture-cross-section measurements with the Argonne National Laboratory large-liquid-scintillator tank, 8:30752 (RA:US)
Solvent Extraction
Determination of extraction equilibria for several metals in the development of a process designed to recover aluminum and other metals from coal combustion ash, 8:28821 (J:NL)

SILVER 109 TARGET
Neutron Reactions
Status of recent fast capture cross section evaluations for important fission product nuclides, 8:30756 (RA:US)

SIN CYCLOTRON
Includes the 590 MeV ring cyclotron and the two injector cyclotrons.
Neutron Sources
Some aspects of the neutronics of the SIN neutron source, 8:29276 (RA:US)
Status report on the SIN neutron source, 8:30200 (RA:US)

SKELETON
Delayed Radiation Effects
Human health effects of radium: an epidemiologic perspective of research at Argonne National Laboratory, 8:30464 (RA:US)
Mineralization
Chronic radium intoxication: preliminary report of morphological and mineral changes in human bone, 8:30465 (RA:US)
Morphological Changes
Chronic radium intoxication: preliminary report of morphological and mineral changes in human bone, 8:30465 (RA:US)
Radiochemical Analysis
Rare earth analysis in human biological samples by atomic absorption using electrothermal atomization, 8:30086 (RA:US)

SLAGS
Dissolution
Coordination cluster theory of solutions, 8:30027 (BA:US)
Hydration
Pore structure formation during hydration of fly-ash and slag cement blends, 8:28846 (RA:US)
Waste Product Utilization
Pore structure formation during hydration of fly-ash and slag cement blends, 8:28846 (RA:US)

SLUDGES
See also SEWAGE SLUDGE
Removal
Removal of fines from recirculation water in a coal slurry system, 8:28962 (BA:US)
Waste Product Utilization
Removal of sulfur dioxide from a hot-gas stream using water-softening sludge, 8:28864 (R:US)

SLUGS (FUEL)
See FUEL RODS

SLURRIES
See also FUEL SLURRIES
Ground Disposal
Stabilization of fine-coal-refuse slurry through use of cement-type additives, 8:28872 (J:US)
Mixing
Power characteristics of two principal axial impeller types for slurry holding tanks, 8:28934 (BA:US)
Pumping
Coal-slurry pump development. Technical progress report No. 42, 8:28799 (R:US)
Rheology
Effects of viscosity reducing chemical additives on slurry rheology and pipeline transport performance for various mineral slurries (Viscosity reducing additives), 8:28935 (BA:US)
Laminar transport of Bingham plastic slurries (Newtonian fluids, heterogeneous slurries and Bingham plastic slurries), 8:28938 (BA:US)
New viscometer for determining the effect of particle size distributions and concentration on slurry rheology, 8:28835 (BA:US)
Seventh international technical conference on slurry transportation. Proceedings, 8:28912 (B:US)
Viscosity
Development of coal/liquid CO_2 slurry transportation: current status, 8:28939 (BA:US)

SLURRIES (FUEL)
See FUEL SLURRIES

SLURRY PIPELINES
Calculation Methods
Computational approach for coal slurry pipelines, 8:28936 (BA:US)
Coal Preparation
Controlling bulk inventories for slurry preparation, 8:28944 (BA:US)
ETSI Coal Evaluation Plant, 8:28920 (BA:US)
Operating experience of the Black Mesa Pipeline, 8:28964 (BA:US)
Comparative Evaluations
Coal transportation: the economic alternatives, 8:28940 (BA:US)
Coalstream pipeline project (Illinois Basin and Appalachia to Georgia and Florida), 8:28916 (BA:US)
Development of coal/liquid CO_2 slurry transportation: current status, 8:28939 (BA:US)
Control Systems
Survey of coarse coal slurries (0 to 50 mm size of coal), 8:28926 (BA:US)
Corrosion
Fosfertil phosphate pipeline: three years of operation, 8:28943 (BA:US)
Corrosion Protection
Studies on molybdate as pipeline corrosion inhibitor in coal water slurries, 8:28953 (BA:US)
Design
Alton pipeline Allen-Warner Valley energy system, 8:28915 (BA:US)
Computational approach for coal slurry pipelines, 8:28936 (BA:US)
ETSI to date, 8:28913 (BA:US)
Fosfertil phosphate pipeline: three years of operation, 8:28943 (BA:US)
Survey of coarse coal slurries (0 to 50 mm size of coal), 8:28926 (BA:US)
Economics
Effect of particle size distribution on the economics of short distance coal slurry pipelines (Minus 50 mm compared to minus 1.2 mm top size), 8:28958 (BA:US)
Seventh international technical conference on slurry transportation. Proceedings, 8:28912 (B:US)

Eminent Domain
San Marco Pipeline (Walsenburg, Co to near Houston, TX), 8:28918 (BA:US)
Environmental Impact Statements
Enviromental impact statement: the ETSI project (Preparation), 8:28921 (BA:US)
Feasibility Studies
Alberta coal supply pipeline study - 1981 (Coalspur, Alberta to Kitimat, British Columbia; 1016 km), 8:28959 (BA:US)
Coal slurry pipelines in Virginia: a preliminary feasibility study status report (West to east in Virginia), 8:28919 (BA:US)
Computer application of a preliminary feasibility model to a Turkish iron-ore and a Virginia coal slurry pipeline, 8:28960 (BA:US)
Powder River Pipeline project (Montana and Wyoming to Great Lakes), 8:28914 (BA:US)
Seventh international technical conference on slurry transportation. Proceedings, 8:28912 (B:US)
Flexibility
Examination of flexible pipe for slurry use (For special uses such as ship loading or special positions), 8:28954 (BA:US)
Fluid Mechanics
Computational approach for coal slurry pipelines, 8:28936 (BA:US)
Laminar transport of Bingham plastic slurries (Newtonian fluids, heterogeneous slurries and Bingham plastic slurries), 8:28938 (BA:US)
Legislation
Legislative aspects of slurry transportation: luncheon speech (Review of attempt to pass eminent domain legislation), 8:28922 (BA:US)
Liners
Pipe behavior in bottom ash slurry systems, 8:28957 (BA:US)
Maintenance
Operating experience of the Black Mesa Pipeline, 8:28964 (BA:US)
Materials
Abrasiveness of fine grain particles in slurry machinery, 8:28952 (BA:US)
Pipe behavior in bottom ash slurry systems, 8:28957 (BA:US)
Materials Testing
Pipe behavior in bottom ash slurry systems, 8:28957 (BA:US)
Meetings
Seventh international technical conference on slurry transportation. Proceedings, 8:28912 (B:US)
Operation
Fosfertil phosphate pipeline: three years of operation, 8:28943 (BA:US)
Operating experience of the Black Mesa Pipeline, 8:28964 (BA:US)
Permit Applications
Enviromental impact statement: the ETSI project (Preparation), 8:28921 (BA:US)
Planning
Alton pipeline Allen-Warner Valley energy system, 8:28915 (BA:US)
Coalstream pipeline project (Illinois Basin and Appalachia to Georgia and Florida), 8:28916 (BA:US)
ETSI to date, 8:28913 (BA:US)
Pacific bulk transportation system, 8:28917 (BA:US)
Powder River Pipeline project (Montana and Wyoming to Great Lakes), 8:28914 (BA:US)
San Marco Pipeline (Walsenburg, Co to near Houston, TX), 8:28918 (BA:US)
Ponds
Lining coal slurry pipeline ponds with soil-cement, 8:28956 (BA:US)
Pressure Drop
Hydraulic transport of coarse solids in circular and segmented pipes (Pipe cross section: major ore with flat bottom vs circular), 8:28924 (BA:US)
Laminar transport of Bingham plastic slurries (Newtonian fluids, heterogeneous slurries and Bingham plastic slurries), 8:28938 (BA:US)
Survey of coarse coal slurries (0 to 50 mm size of coal), 8:28926 (BA:US)
Pumps
Application of the electronicaly controlled synchronous motor to slurry pipeline pumping, 8:28929 (BA:US)
Application and experience of hydroviscous drives in slurry pipeline pumps service, 8:28930 (BA:US)
Fosfertil phosphate pipeline: three years of operation, 8:28943 (BA:US)
High pressure coal slurry pumping with hydraulic exchange pumps, 8:28932 (BA:US)
Operating experience of the Black Mesa Pipeline, 8:28964 (BA:US)
Plunger flush system (Development and testing of flushing system to keep slurry away from packing), 8:28931 (BA:US)
Pump scaling and leakage charcteristics of a positive displacement rotary ram slurry pump (Detection of the slurry by a water-powered rotating barrel slurry pump), 8:28933 (BA:US)
Seventh international technical conference on slurry transportation. Proceedings, 8:28912 (B:US)
Rights-of-Way
Alton pipeline Allen-Warner Valley energy system, 8:28915 (BA:US)
Computer assisted data analysis of slurry pipeline route selection, 8:28937 (BA:US)
Linear routing methodologies to locate slurry pipelines, 8:28947 (BA:US)
Site Selection
Computer assisted data analysis of slurry pipeline route selection, 8:28937 (BA:US)
Linear routing methodologies to locate slurry pipelines, 8:28947 (BA:US)
Test Facilities
Prediction of size degradation of coarse coal during slurry pipeline transportation, 8:28961 (BA:US)
Transients
Calculating transient flows in slurry pipelines, 8:28951 (BA:US)
Values
Operating experience of the Black Mesa Pipeline, 8:28964 (BA:US)
Valves
Fosfertil phosphate pipeline: three years of operation, 8:28943 (BA:US)
Waste Water
Coal slurry dewatering operations wastewater treatability studies, 8:28948 (BA:US)
Water quality as a factor in the reuse and disposal of coal slurry water, 8:28946 (BA:US)
Water quality aspects of coal slurry pipelining: a literature survey, 8:28949 (BA:US)
Water quality simulation for the design of the ESTI wastewater treatment facilities, 8:28950 (BA:US)
Water Hammer
Calculating transient flows in slurry pipelines, 8:28951 (BA:US)
Water Removal
ETSI Coal Evaluation Plant, 8:28920 (BA:US)
Water Rights
San Marco Pipeline (Walsenburg, Co to near Houston, TX), 8:28918 (BA:US)
Water Supply
Alton pipeline Allen-Warner Valley energy system, 8:28915 (BA:US)
ETSI to date, 8:28913 (BA:US)
Wear
Abrasiveness of fine grain particles in slurry machinery, 8:28952 (BA:US)
Welding
CRC automatic pipeline welding system (Contains list of 36 pipelines constructed since 1978: location, company, length, pipe size and wall thickness), 8:28955 (BA:US)

SMOKATRON
See ELECTRON-RING ACCELERATORS

SNG
See HIGH BTU GAS

SODIUM
Crystal-Phase Transformations
H-Division. Materials Physics quarterly report, October-December 1982, 8:29888 (R:US)
Ion-Molecule Collisions
Studies of the structure and bonding of inorganic clusters, 8:30023 (J:NL)
Membrane Transport
Transport of alkali metal cations across liquid membranes by crown ether carboxylic acids, 8:29995 (J:NL)
Photoionization
Studies of photoionization processes from ground-state and excited-state atoms and molecules, 8:30635 (R:US)
Separation Processes
Transport of alkali metal cations across liquid membranes by crown ether carboxylic acids, 8:29995 (J:NL)
Solvent Extraction
Determination of extraction equilibria for several metals in the development of a process designed to recover aluminum and other metals from coal combustion ash, 8:28821 (J:NL)
SODIUM CHLORIDES
Chemical Reactions
Characterization of molybdenum interfacial crud in a uranium mill that employs tertiary-amine solvent extraction, 8:29104 (R:US)
Color Centers
Temperature dependence of radiation colloidal centers production and annealing in alkali halide crystals, 8:29955 (R:SU)
Phase Diagrams
Amphiphilic properties of low-equivalent-weight organic salts, 8:30039 (R:US)
Phase Studies
Amphiphilic properties of low-equivalent-weight organic salts, 8:30039 (R:US)
Physical Radiation Effects
Temperature dependence of radiation colloidal centers production and annealing in alkali halide crystals, 8:29955 (R:SU)
Raman Spectra
Raman spectra of molten $SbCl_3/AlCl_3$ mixtures, 8:30034 (J:NL)
Structural Chemical Analysis
Raman spectra of molten $SbCl_3/AlCl_3$ mixtures, 8:30034 (J:NL)
Thermodynamic Properties
Some thermodynamic properties of molten binary mixtures of alkaline-earth and alkali-metal chlorides, 8:30036 (TJ:US)
SODIUM CITRATES
See SODIUM COMPOUNDS
SODIUM COMPOUNDS
See also SODIUM CHLORIDES
SODIUM FLUORIDES
Lattice Parameters
Structure of sodium methanesulfonate, 8:30025 (J:DK)
Orthorhombic Lattices
Structure of sodium methanesulfonate, 8:30025 (J:DK)
Reaction Kinetics
Estimation of activity coefficients in concentrated sulfite-sulfate solutions, 8:28870 (J:US)
Thermodynamic Activity
Estimation of activity coefficients in concentrated sulfite-sulfate solutions, 8:28870 (J:US)
SODIUM FLUORIDES
Phase Diagrams
Computer analysis of phase diagrams and thermodynamic properties of cryolite based systems: 1. The AlF_3-LiF-NaF system, 8:30031 (J:US)
Thermodynamic Properties
Computer analysis of phase diagrams and thermodynamic properties of cryolite based systems: 1. The AlF_3-LiF-NaF system, 8:30031 (J:US)
SODIUM LAURYL SULFATES
See SODIUM COMPOUNDS
SODIUM MINERALS
See MINERALS
SODIUM-SULFUR BATTERIES
Design
Secondary batteries - new batteries: high temperature, 8:29724 (BA:US)
Performance
Secondary batteries - new batteries: high temperature, 8:29724 (BA:US)
SOILS
Decontamination
Radiological guidelines for application to DOE's Formerly Utilized Sites Remedial Action Program, 8:29256 (R:US)
Erosion
Overland erosion of uranium-mill-tailings impoundments: physical processes and computational methods, 8:29247 (R:US)
Heat Transfer
Coupled heat and moisture transport in unsaturated soils, 8:30592 (RA:US)
Hydrology
Influence of climatic parameters on movement of radionuclides in a multilayered saturated-unsaturated media, 8:30593 (RA:US)
Radionuclide Migration
Predictability of solute transport in diffusion-controlled hydrogeologic regimes, 8:29246 (RA:US)
SOLAR ABSORBERS
Weathering
Environmental degradation of solar optical materials. Volume 1. Literature survey, 8:29422 (R:US)
SOLAR AIR HEATERS
Convection
Forced- and natural-convection studies on solar collectors for heating and cooling applications. Final report, 8:29418 (R:US)
SOLAR CELLS

PROCESS SOLUTIONS
Absorptivity
Apparatus and method for measurement of weak optical absorptions by thermally induced laser pulsing, 8:30311 (P:US)
Apparatus and method for quantitative measurement of small differences in optical absorptivity between two samples using differential interferometry and the thermooptic effect, 8:30312 (P:US)
Statistical Mechanics
Coordination cluster theory of solutions, 8:30027 (BA:US)

SOLVENT EXTRACTION
Centrifuges
Flow over circular weirs in a centrifugal field, 8:29114 (J:CA)

SOLVENT-REFINED COAL
Mutagen Screening
Light activation of natural and synthetic petroleums, 8:28982 (RA:US)

SOLVENT-REFINING COAL PLANTS
See COAL PREPARATION PLANTS

SONDES
See PROBES
SOOT
Chemical Reaction Kinetics
Oxidation of SO_2 in droplets which contain soot particles, 8:30340 (J:GB)
SOUTH AFRICA
Terminal Facilities
Coal slurry shiploading world trade applications (Location, capacity, limiting ship size), 8:28928 (BA:US)
Waste Product Utilization
International aspects of development of the uses of fly ash with cement (Denmark, India, France, Great Britain, Canada, Japan, South Africa, Australia, USA, China, Poland), 8:28857 (RA:US)
SOUTH KOREA
See REPUBLIC OF KOREA
SOUTHWEST REGION
See FEDERAL REGION VI
SOYBEANS
Genetic Engineering
Genetic engineering with a gene encoding a soybean storage protein. Progress report, 8:30434 (R:US)
SPACE HEATERS
Combustion Chambers
Ceramic boilers: ready for series production in 3 years, 8:29814 (TJ:GB)
SPACE POWER REACTORS
Comparative Evaluations
Space reactor electric systems: system integration studies, Phase 1 report, 8:29593 (R:US)
Cost
Space reactor electric systems: system integration studies, Phase 1 report, 8:29593 (R:US)
Specifications
Space reactor electric systems: system integration studies, Phase 1 report, 8:29593 (R:US)
SPACE VEHICLES
Electrostatics
Spacecraft charging and related effects during Halley encounter, 8:30620 (R:US)
Materials
Recent developments in graphite, 8:29953 (R:US)
Rockets
Fracture tolerance analysis of the solid rocket booster servo-actuator for the space shuttle, 8:29898 (J:US)
SPAIN
Archaeological Sites
An American scientist visits the Altamira cave in northern Spain, 8:30350 (J:US)
SPARK IGNITION ENGINES
Combustion Chambers
Enhanced ignition for I.C. engines with premixed gases, 8:29859 (J:US)
Ignition Systems
Enhanced ignition for I.C. engines with premixed gases, 8:29859 (J:US)
SPECTRA UNFOLDING
Computer Codes
GRANAS system for graphic analysis of nuclear spectrometrical data, 8:30996 (R:SU:In Russian)
Interactive Display Devices
GRANAS system for graphic analysis of nuclear spectrometrical data, 8:30996 (R:SU:In Russian)
SPECTRALLY SELECTIVE SURFACES
Technology Assessment
Status of black chrome coating research, 8:29419 (R:US)
SPECTROCHEMISTRY
See EMISSION SPECTROSCOPY
SPECTROMETERS
See also EPR SPECTROMETERS
GAMMA SPECTROMETERS
MAGNETIC SPECTROMETERS
MASS SPECTROMETERS
NEUTRON SPECTROMETERS
NMR SPECTROMETERS
PROTON SPECTROMETERS
TIME-OF-FLIGHT SPECTROMETERS
Data Acquisition Systems
Three-level system for spectrometric data acquisition, processing and analysis, 8:30282 (R:SU:In Russian)
Data Processing
Program TXRES - convolution of sharp excitation cross-section with triple-axis resolution function, 8:30262 (R:GB)
Gratings
Space and time resolved soft x-ray spectra using x-ray transmission gratings, 8:30315 (J:US)
SPENT FUEL CASKS
Design
Summary report on optimized designs for shipping casks containing 2-, 3-, 5-, 7-, or 10-year-old PWR spent fuel, 8:29115 (R:US)
Shielding
Shielding analysis on spent fuel transport cask by RADHEAT-V3 code system, 8:30101 (R:JP:In Japanese)
SPENT FUEL ELEMENTS
Burnup
Method and apparatus for measuring irradiated fuel profiles (Patent), 8:29617 (P:US)
Cherenkov Counters
Portable instrument for inspecting irradiated nuclear-fuel assemblies in a water-filled storage pond by measurement of induced Cerenkov radiation (Patent), 8:30299 (P:US)
Dimensions
Use of lasers at the Los Alamos Hot-Cell Facility, 8:30103 (R:US)
Fuel Scanning
Method and apparatus for measuring irradiated fuel profiles (Patent), 8:29617 (P:US)
Remote Handling
Operational experience in remote handling during the reprocessing of PFR fuel elements, 8:29112 (BA:US)
Removal
Vibrating fuel grapple (Patent), 8:29591 (P:US)
Transport
Experience with fuel damage from abnormal conditions in handling and transport, 8:29117 (R:US)
Uses
"Fabrice" process for reconstituting experimental rods in a hot cell from pre-irradiated rods in power reactors, 8:29615 (R:FR:In French)
SPENT FUEL STORAGE
Monitored retrievable storage of nuclear waste in the US, 8:29129 (R:US)
SPENT FUELS
Inventories
Fuel inventories and derived parameters for the reactor systems CDFR, LWR, AGR and MAGNOX, 8:29598 (R:GB)
Leaching
Probable leaching mechanisms for UO_2 and spent fuel, 8:29941 (BA:US)
Reprocessing
Chemical processing monthly report, 8:29110 (R:US)
Equilibrium theory of a pressure swing adsorption process, 8:29113 (J:GB)
Operational experience in remote handling during the reprocessing of PFR fuel elements, 8:29112 (BA:US)
Plutonium issue: an analysis of policies deferring the introduction of plutonium-fueled reactors in the US. Technical report SOL 78-24, 8:29739 (R:US)
Waste-Rock Interactions
Comparison of the hydrothermal stability of simulated spent fuel and borosilicate glass in a basaltic environment, 8:29161 (R:US)
SPENT SHALES
Biological Effects
Biochemical and cellular effects of inhalation exposure to oil shale dusts, 8:29081 (RA:US)
Inhalation studies, 8:29080 (RA:US)
Carcinogenesis
Inhalation studies, 8:29080 (RA:US)

Inhalation
Biochemical and cellular effects of inhalation exposure to oil shale dusts, 8:29081 (RA:US)
Toxicity
Aerosol support, 8:29079 (RA:US)
Water Pollution
Assessment and control of water contamination associated with shale oil extraction and processing, 8:29095 (RA:US)

SPERM
See SPERMATOZOA

SPERMATIDS
See SPERMATOZOA

SPERMATOZOA
Biological Dosemeters
Applicability of micronucleus and sperm abnormality assays in cytogenetic dosimetry, 8:30488 (RA:DE)

SPHENE
$CaTiSiO_5$.
Leaching
Leaching of natural and synthetic sphene and perovskite, 8:29938 (BA:US)
SIMS depth profiling studies of sphene-based ceramics and glass ceramics leached in synthetic groundwater, 8:29937 (BA:US)

SPHEROMAK DEVICES
Studies of conceptual spheromak fusion reactors, 8:30943 (J:AT)
Flute Instability
Kinetic and resistive effects on interchange instabilities for a cylindrical model spheromak, 8:30863 (R:US)

SPOIL BANKS
Failures
An integrated report on slope failure mechanisms at Goonyella - November 1976, 8:28905 (B:AU)

SPRAY PONDS
See COOLING PONDS

SQUID DEVICES
Superconducting Quantum Interference Devices
Design
Apparatus and method for detecting a magnetic anomaly contiguous to remote location by SQUID gradiometer and magnetometer systems, 8:30116 (P:US)

STABILITY (REACTOR)
See REACTOR STABILITY

STABLE ISOTOPES
For specific terms, consult the Appendix.
See also CARBON 13

NEODYMIUM 146
NITROGEN 15
OXYGEN 17
OXYGEN 18
SAMARIUM 148
Catalogs
Stable isotope research pool inventory, 8:29265 (R:US)
Inventories
Stable isotope research pool inventory, 8:29265 (R:US)
Research Programs
National stable isotopes resource, 8:30406 (RA:US)

STAINLESS STEEL-304
Crack Propagation
An interactive damage equation for creep-fatigue interaction, 8:29925 (BA:GB)
Fracture Mechanics
Weld residual-stress redistribution near growing cracks. Final report, 8:29548 (R:US)
Fracture Properties
An interactive damage equation for creep-fatigue interaction, 8:29925 (BA:GB)
Stress Corrosion
Mechanistic aspects of stress-corrosion cracking of type 304 stainless steel in LWR systems, 8:29553 (R:US)
Plant Materials Program: progress June 1981 to May 1982, 8:29541 (R:US)
Weld residual-stress redistribution near growing cracks. Final report, 8:29548 (R:US)

STAINLESS STEEL-304L
Corrosion
Dissolution and passivation kinetics of Fe-Cr-Ni alloys during localized corrosion, 8:29864 (R:US)

STAINLESS STEEL-308
Chemical Composition
Microstructural effects on H motion in fcc stainless alloys, 8:29870 (RA:US)
Fcc Lattices
Microstructural effects on H motion in fcc stainless alloys, 8:29870 (RA:US)

STAINLESS STEEL-310
Chemical Composition
Microstructural effects on H motion in fcc stainless alloys, 8:29870 (RA:US)
Fcc Lattices
Microstructural effects on H motion in fcc stainless alloys, 8:29870 (RA:US)

STAINLESS STEEL-316
Chemical Composition
Corrosion studies on structural alloys for flue-gas desulfurization systems, 8:28863 (R:US)
Compatibility
Irradiation and compatibility testing of Li_2O materials at EBR-II, 8:30885 (R:US)
Corrosion
Compatibility of stainless steel with Pb-17 at. pct. Li, 8:29893 (J:US)
Corrosion studies on structural alloys for flue-gas desulfurization systems, 8:28863 (R:US)
Cracks
Effects of neutron irradiation on fatigue and creep-fatigue crack propagation in type 316 stainless steel at 649 degree C produced no significant effect on the crack propagation rate when compared with unirradiated steel tested at 649 degree C, 8:29905 (J:US)
Creep
Reduction of irradiation-induced creep and swelling in AISI 316 by compositional modifications, 8:29915 (J:US)
Fatigue
Effects of neutron irradiation on fatigue and creep-fatigue crack propagation in type 316 stainless steel at 649 degree C produced no significant effect on the crack propagation rate when compared with unirradiated steel tested at 649 degree C, 8:29905 (J:US)
Mechanical Properties
Microstructural interpretation of the fluence and temperature dependence of the mechanical properties of irradiated AISI 316 (Neutron irradiation), 8:29906 (J:US)
Microstructure
Microstructural development in dual-ion-bombarded 316 stainless steel, 8:29908 (J:US)
Study of radiation damage produced in thinned specimens of 316 stainless steel by energetic helium ions, 8:29913 (J:US)
Physical Radiation Effects
Effects of neutron irradiation on fatigue and creep-fatigue crack propagation in type 316 stainless steel at 649 degree C produced no significant effect on the crack propagation rate when compared with unirradiated steel tested at 649 degree C, 8:29905 (J:US)
Microstructural interpretation of the fluence and temperature dependence of the mechanical properties of irradiated AISI 316 (Neutron irradiation), 8:29906 (J:US)
Microstructural development in dual-ion-bombarded 316 stainless steel, 8:29908 (J:US)
Study of radiation damage produced in thinned specimens of 316 stainless steel by energetic helium ions, 8:29913 (J:US)
Radiation Effects
Reduction of irradiation-induced creep and swelling in AISI 316 by compositional modifications, 8:29915 (J:US)
Stress Corrosion
Irradiation and compatibility testing of Li_2O materials at EBR-II, 8:30885 (R:US)
Swelling
Reduction of irradiation-induced creep and swelling in AISI 316 by compositional modifications, 8:29915 (J:US)

STAINLESS STEELS
STAINLESS STEEL-304

STAINLESS STEEL-308
STAINLESS STEEL-310
STAINLESS STEEL-316
Biological Fouling
Biofouling and corrosion stdies at Keahole Point, Hawaii (1978-1980), 8:29396 (RA:US)
Corrosion
Biofouling and corrosion stdies at Keahole Point, Hawaii (1978-1980), 8:29396 (RA:US)
Ductility
Coarse slip processes and crack propagation in irradiated stainless steel, 8:29907 (J:US)
Fracture Properties
Fracture resistance of HT-9 after irradiation at elevated temperature, 8:29903 (J:US)
Molecule Collisions
Phenomenological study of heterogeneous chemical reactions on heated stainless steel surfaces relevant to mercuric halide lasers, 8:30628 (RA:US)
Physical Radiation Effects
Coarse slip processes and crack propagation in irradiated stainless steel, 8:29907 (J:US)
Fracture resistance of HT-9 after irradiation at elevated temperature, 8:29903 (J:US)
Internally consistent model for radiation-induced void swelling, 8:29902 (J:US)
Swelling
Internally consistent model for radiation-induced void swelling, 8:29902 (J:US)
Tensile Properties
Fracture resistance of HT-9 after irradiation at elevated temperature, 8:29903 (J:US)
STANDARD MAN
See REFERENCE MAN
STANDING CROP
See BIOMASS
STANFORD 20-GEV LINAC
Waveguides
SLAC down stream waveguide bend (X-5) (Engineering Materials), 8:30250 (E:US)
STANFORD LINEAR ACCELERATOR CENTER
Colliding Beams
Status of the SLAC Linear Collider Project, 8:30242 (R:US)
STAR ACCRETION
Mathematical Models
Accretion disks, 8:30612 (R:US)
STAR MODELS
Mathematical models of stars.
Hydrodynamic Model
Nonlinear hydrodynamics. Lecture 9, 8:30616 (R:US)
Pulsations
Nonlinear hydrodynamics. Lecture 9, 8:30616 (R:US)
STARFIRE TOKAMAK
Design
Starfire - a conceptual design of a commercial tokamak power plant, 8:30959 (BA:XA)
Radioactivity
Waste management of first wall and blanket structural materials for tokamak fusion reactors, 8:30890 (R:US)
STATE BUILDINGS
See PUBLIC BUILDINGS
STATE GOVERNMENT
Federal Assistance Programs
Information and training program for state and regional SLAP organizations. Final report, February 1, 1981-January 31, 1983, 8:29768 (R:US)
Research Programs
Federal funds for research and development, Fiscal years 1979, 1980, and 1981. Volume XXIX. Detailed statistical tables, 8:29758 (R:US)
STATISTICAL MECHANICS
Entropy
Interpretation of fine entropy from non-conservative statistical mechanics, 8:30820 (J:US)
STEAM GENERATORS
HTGR Plant Technology Program. Semiannual report for the period ending September 24, 1982, 8:29571 (R:US)
Comparative Evaluations
Comparative evaluation of surface and downhold steam generation techniques, 8:29020 (J:US)
Corrosion Products
Primary-side deposits on PWR steam-generator tubes, 8:29563 (R:US)
Eddy Current Testing
Contribution to perfecting eddy current testing of steam generator tubes of sodium cooled breeders: description of the Monacault loop for the study of sodium deposit influence, 8:29579 (R:FR:In French)
Field Tests
Direct-fired downhole steam generator: from design to field test, 8:29021 (J:US)
Heat Transfer
RETRAN-02 analysis of a steam generator tube break incident (PWR), 8:29652 (RA:US)
Hydraulics
RETRAN-02 analysis of a steam generator tube break incident (PWR), 8:29652 (RA:US)
Leaks
RETRAN-02 analysis of a steam generator tube break incident (PWR), 8:29652 (RA:US)
Transients
Analysis of steam-generator transients with RETRAN-02, 8:29658 (RA:US)
Tubes
Diffusion and hideout in crevices. Final report (PWR), 8:29564 (R:US)
Fatigue performance of Ni-Cr-Fe Alloy 600 under typical PWR steam-generator conditions. Final report, 8:29561 (R:US)
Investigation of phosphate-sludge interactions. Final report (PWR), 8:29562 (R:US)
Steam-generator tube-plugging and tube-sleeving criteria: assessment of current practices (PWR), 8:29559 (R:US)
STEAM INJECTION
Heat Losses
Method of measuring steam quality and heat loss in distribution and downhole piping, 8:29019 (J:US)
Monitoring
Seismic imaging in enhanced recovery, 8:29002 (J:US)
Process Heat
Cogeneration in enhanced oil recovery operations, 8:28992 (RA:US)
Seismic Surveys
Seismic imaging in enhanced recovery, 8:29002 (J:US)
Steam Generators
Comparative evaluation of surface and downhold steam generation techniques, 8:29020 (J:US)
Direct-fired downhole steam generator: from design to field test, 8:29021 (J:US)
Temperature Monitoring
Controlled-source audio magnetotelluric (CSAMT) survey of steamflood in subsurface tar sands, 8:29069 (R:US)
Water Requirements
Identification of water requirements for selected enhanced oil recovery methods, 8:28989 (R:US)
STEAM SEPARATORS
Performance Testing
Geothermal steam separator evaluation, 8:29452 (RA:US)
STEAM SYSTEMS
Energy Transport
Direct steam-transmission design and costs. Final report, 8:29601 (R:US)
STEAM TURBINES
Design
Design and development of an open cycle OTEC turbine with particular emphasis on mechanical design aspects of rotor blades, 8:29382 (RA:US)
Failures
Scale-model tests of turbine missile containment by reinforced concrete. Final report (PWR), 8:29671 (R:US)

STEEL-ASTM-A106
Stress Corrosion
Plant Materials Program: progress June 1981 to May 1982, 8:29541 (R:US)
STEEL-ASTM-A508
Stress Corrosion
Plant Materials Program: progress June 1981 to May 1982, 8:29541 (R:US)
STEEL-DIN-1-4970
Physical Radiation Effects
Absence of annealing twins in some austenitic steels during radiation-induced recrystallization, 8:29880 (R:DE)
STEELS
See also AUSTENITIC STEELS
NICKEL STEELS
STAINLESS STEELS
STEEL-ASTM-A508
Crack Propagation
Relation of hydrogen effects on plasticity to the cracking of steels, 8:29866 (RA:US)
Creep
AR and TD Fossil Energy Materials Program. Quarterly progress report for the period ending December 31, 1982, 8:28814 (R:US)
Electroplating
Hydrogen behaivor in coated and uncoated low alloy steels (Type 4340 steels), 8:29868 (RA:US)
Fatigue
AR and TD Fossil Energy Materials Program. Quarterly progress report for the period ending December 31, 1982, 8:28814 (R:US)
Fracture Properties
AR and TD Fossil Energy Materials Program. Quarterly progress report for the period ending December 31, 1982, 8:28814 (R:US)
Hydrogen Embrittlement
Hydrogen behaivor in coated and uncoated low alloy steels (Type 4340 steels), 8:29868 (RA:US)
Relation of hydrogen effects on plasticity to the cracking of steels, 8:29866 (RA:US)
Market
Analysis and estimation of a nonlinear storage-price model for steel scrap, 8:29752 (R:US)
Materials Recovery
Analysis and estimation of a nonlinear storage-price model for steel scrap, 8:29752 (R:US)
Permeability
Hydrogen diffusion and trapping in metals by a periodic technique (1045 Steel, nickel-2% thoria), 8:29869 (RA:US)
Plasticity
Relation of hydrogen effects on plasticity to the cracking of steels, 8:29866 (RA:US)
Prices
Analysis and estimation of a nonlinear storage-price model for steel scrap, 8:29752 (R:US)
Sorptive Properties
Concerning adsorbed and absorbed hydrogen on and in ferrous metals, 8:29867 (RA:US)
Hydrogen behaivor in coated and uncoated low alloy steels (Type 4340 steels), 8:29868 (RA:US)
Traps
Hydrogen diffusion and trapping in metals by a periodic technique (1045 Steel, nickel-2% thoria), 8:29869 (RA:US)
Yield Strength
Collapse of thick-walled cylinders under external pressure, 8:30137 (J:US)
STELLAR MAGNETOSPHERES
Plasma Waves
Nonlinear mechanism of radiation generation in pulsar plasma, 8:30621 (R:SU:In Russian)
STELLARATOR TYPE REACTORS
Design
Modular stellarator reactor conceptual design study, 8:30912 (R:US)
STELLARATORS
See also TORSATRON STELLARATOR
WEGA STELLARATOR
Ballooning Instability
Ballooning-mode calculations in stellarators, 8:30855 (R:US)
Joule Heating
Effect of plasma current on restoring force in Ohmically heated stellarators, 8:30872 (J:AT)
Neutral Atom Beam Injection
Neutral beam heating in stellarators: a numerical approach, 8:30859 (R:US)
STEM CELLS
Biological Dosemeters
Blood stem cells as an indicator of radiation exposure, 8:30489 (RA:DE)
Stains
Rapid staining procedures for analysis of cellular DNA and protein by single and dual laser flow cytometry, 8:30424 (RA:US)
STIMULATED EMISSION DEVICES
See LASERS
STIRLING ENGINES
Capitalized Cost
Advanced locomotive heat engines, 8:29860 (R:US)
Technology Assessment
Advanced locomotive heat engines, 8:29860 (R:US)
STOCHASTIC COOLING
Electric Filters
Filters for stochastic cooling of longitudinal beam emittance, 8:30174 (R:US)
STOMATA
Biological Functions
Longevity of guard cell chloroplasts in falling leaves: implication for stomatal function and cellular aging, 8:30457 (J:US)

STREPTOMYCIN
Genetic Effects
Stable cytoplasmic male-sterile mutants induced in Tift 23DB$_1$ pearl millet with mitomycin and streptomycin, 8:30437 (J:US)
STRESS INTENSITY FACTORS
Evaluation
Stress intensity factor due to parallel impact loading of the faces of a crack, 8:29924 (J:US)
STRONG INTERACTIONS
Coupling Constants
Measurement of α/sub s/ (Strong fine structure constant), 8:30679 (R:US)
Quantum Mechanics
Foundations of the hadronic generalization of the atomic mechanics. I. Generalization of Heisenberg's and Schroedinger's representations, 8:30702 (J:US)
Foundations of the hadronic generalization of the atomic mechanics. II. Modular-isotopic Hilbert space formulation of the exterior strong problem, 8:30703 (J:US)
Foundations of the hadronic generalization of the atomic mechanics. III. Bimodular-genotopic Hilbert space formulation of the interior strong problem, 8:30704 (J:US)
STRONTIUM
Adsorption
Precipitation process for supernate decontamination, 8:29127 (R:US)
Ion Exchange
Phenolic cation-exchange resin material for recovery of cesium and strontium (Patent application), 8:29173 (P:US)
Precipitation
Precipitation-adsorption process for the decontamination of nuclear waste supernates (Patent), 8:29172 (P:US)
STRONTIUM 85
Lung Clearance
Pulmonary retention of insoluble particles in man, 8:30509 (RA:US)
Retention of various types and sizes of particle in the large airways of the rat: implications for assessing the risk of lung cancer, 8:30503 (RA:US)
Retention Functions
Pulmonary retention of insoluble particles in man, 8:30509 (RA:US)
Retention of various types and sizes of particle in the large airways of the rat: implications for assessing the risk of lung cancer, 8:30503 (RA:US)
Spatial distribution of inhaled particles in rodent lungs, 8:30501 (RA:US)
Spatial Dose Distributions
Spatial distribution of inhaled particles in rodent lungs, 8:30501 (RA:US)
STRONTIUM 90
Ion Exchange
Development of partitioning method - cold and semihot experimental works with partitioning testing apparatus, 8:29130 (R:JP:In Japanese)
Lung Clearance
Dosimetry of internally deposited radionuclides in lung and its usefulness in predicting biological effects, 8:30498 (RA:US)
Radioecological Concentration
Investigation of radionuclide concentrations in tissues of elk utilizing Los Alamos National Laboratory lands, 8:30364 (RA:US)
STRONTIUM CHLORIDES
Thermodynamic Properties
Some thermodynamic properties of molten binary mixtures of alkaline-earth and alkali-metal chlorides, 8:30036 (TJ:US)
STRONTIUM FLUORIDES
Chemical Radiation Effects
Spectroscopic studies of α-induced radiation damage in divalent metal fluorides, 8:30078 (J:US)
STRONTIUM OXIDES
Crystal-Phase Transformations
Neutron scattering studies of pretransitional phenomena in structural phase transformations, 8:29940 (J:US)

SULFURIC ACID
Corrosive Effects
Corrosion studies on structural alloys for flue-gas desulfurization systems, 8:28863 (R:US)

SUPER PHENIX REACTOR
Load Management
Particular characteristics of fast reactors: functional aspects and technological aspects, 8:29576 (R:FR:In French)
Pumps
Cavitation characterization by the acoustic method. Application to a pump model and to the primary pump of the Super Phenix fast reactor, 8:29580 (R:FR:In French)

SUPERCONDUCTING CAVITY RESONATORS
Feasibility Studies
Superconductivity and future accelerators, 8:30217 (R:US)

SUPERCONDUCTING COILS
Uses
Static VAR compensator using a superconducting coil, 8:30114 (BA:US)

SUPERCONDUCTING FILMS
Production
Vacuum methods for production of niobium superconducting films, 8:29884 (RA:SU:In Russian)

SUPERCONDUCTING MAGNETS
Development of superconducting magnets for use in nuclear fusion machines, 8:30970 (BA:XA)
Cryogenics
Mirror fusion test facility: magnet cyrogenics, 8:30955 (J:US)
Design
A 50-T/M superconducting quadrupole magnet for a polarized proton beam facility, 8:30246 (J:US)
Feasibility Studies
Superconductivity and future accelerators, 8:30217 (R:US)
Magnet Coils
Internal trim coils for CBA superconducting magnets, 8:30208 (R:US)
Quenching
Quench-protection studies on CBA magnets, 8:30205 (R:US)
Refrigeration
"Magcool"-the production cooling facility for Isabelle magnets, 8:30257 (J:US)
Testing
"Magcool"-the production cooling facility for Isabelle magnets, 8:30257 (J:US)
Thermodynamic Properties
Active magnetic regenerator (Patent), 8:30110 (P:US)

SUPERCONDUCTING QUANTUM INTERFERENCE DEVI
See SQUID DEVICES

SUPERGIANT STARS
Pulsations
Supergiant radial and nonradial pulsations. Lecture 10, 8:30617 (R:US)

SUPERHEAVY ELEMENTS

SUPERNOVAE
Mathematical Models
Gasodynamical models of the type 2 supernovae, 8:30608 (R:SU:In Russian)
Positrons
Positrons from supernova and the origin of the galactic-center positron-annihilation radiation, 8:30618 (R:US)

SUPERSYMMETRY
Scale Dimension
Local supersymmetry and the problem of the mass scales, 8:30718 (R:US)

SUPERVOLTAGE RADIOTHERAPY
See RADIOTHERAPY
SUPPORTS
Corrosion
Integrated compartment method application to the transient heat transfer in gas-cooled reactor, 8:29573 (R:US)
Corrosion Denting
Diffusion and hideout in crevices. Final report (PWR), 8:29564 (R:US)
Performance
Development of new and improved types of roadway support, 8:28894 (R:XE)
Thermal Stresses
Integrated compartment method application to the transient heat transfer in gas-cooled reactor, 8:29573 (R:US)
SURFACE CLEANING
Vibratory finishing for decontamination: pilot scale operation (Mechanical scrubbing with chemical cleaning action), 8:29175 (BA:US)
SURFACE IONIZATION
Isotope Effects
Isotopic analysis of iodine using negative surface ionization, 8:29991 (J:NL)
SURFACE MINING
Manpower
Manpower considerations for the development and operation of large scale surface coal mines, 8:28882 (RA:US)
Mining Equipment
Manpower considerations for the development and operation of large scale surface coal mines, 8:28882 (RA:US)
Slope Stability
An integrated report on slope failure mechanisms at Goonyella - November 1976, 8:28905 (B:AU)
Analysis of the stability of a highwall in an open cut strip coal mine, 8:28900 (B:AU)
Sensitivity and back-analysis of translational failures in Goonyella highwalls, 8:28904 (B:AU)
SURFACE WATERS

THIOPHENE
Thermodynamic Properties
Correlations for estimating critical constants, acentric factor, structure factor, and dipole moment for undefined fractions, 8:28831 (RA:US)

THIOSULFATES
Reaction Kinetics
Estimation of activity coefficients in concentrated sulfite-sulfate solutions, 8:28870 (J:US)
Thermodynamic Activity
Estimation of activity coefficients in concentrated sulfite-sulfate solutions, 8:28870 (J:US)

THORIUM
Diffusion
Laboratory measurements of contaminant attenuation of uranium mill tailings leachates by sediments and clay liners, 8:29249 (R:US)
Neutron Reactions
Absolute measurement of the cross section for 23-keV neutron activation of thorium, 8:30769 (RA:US)
Radiation Scattering Analysis
Utilization of charged particle backscattering to study the near surface region of glasses. Application to depth profiling of lanthanium, cerium, throium and uranium induced by aqueous leaching, 8:29994 (BA:US)
Solvent Extraction
Determination of extraction equilibria for several metals in the development of a process designed to recover aluminum and other metals from coal combustion ash, 8:28821 (J:NL)

THORIUM 228
Dissolution
Isotopic fractionation of thorium and uranium upon leaching of monozite: alpha-recoil damage effects, 8:29977 (BA:US)

THORIUM 230
Dissolution
Isotopic fractionation of thorium and uranium upon leaching of monozite: alpha-recoil damage effects, 8:29977 (BA:US)

THORIUM 232
Dissolution
Isotopic fractionation of thorium and uranium upon leaching of monozite: alpha-recoil damage effects, 8:29977 (BA:US)
Neutron Reactions
Fast-neutron capture in ^{238}U and ^{232}Th, 8:30768 (RA:US)

THORIUM ALLOYS
Electronic Structure
Electronic structure and surface oxidation of the Haucke compounds $CaNi_5$, YNi_5, $LaNi_5$ and $ThNi_5$, 8:29894 (J:CH)
Oxidation
Electronic structure and surface oxidation of the Haucke compounds $CaNi_5$, YNi_5, $LaNi_5$ and $ThNi_5$, 8:29894 (J:CH)

THREE MILE ISLAND-2 REACTOR
Activity Levels
Characterization of contaminants in TMI-2 systems, 8:29560 (R:US)
Decontamination
TMI-2 Technical Information and Examination Program. 1982 annual report, 8:29674 (R:US)
Primary Coolant Circuits
Characterization of contaminants in TMI-2 systems, 8:29560 (R:US)
Radioactive Waste Management
EPICOR II Research and Disposition Program: FY-1982 annual report (Idaho National Engineering Laboratory), 8:29558 (R:US)
Radioactive Waste Processing
TMI-2 Technical Information and Examination Program. 1982 annual report, 8:29674 (R:US)
Reactor Accidents
Significance of the human factor in the safety of nuclear reactors: the French experience and the lessons of Three Mile Island., 8:29625 (R:AU)
TMI-2 Technical Information and Examination Program. 1982 annual report, 8:29674 (R:US)
Repair
TMI-2 Technical Information and Examination Program. 1982 annual report, 8:29674 (R:US)
Surface Contamination
Characterization of contaminants in TMI-2 systems, 8:29560 (R:US)

THYRISTORS
Economics
New solid-state valves for HVDC, 8:29531 (J:US)

TIDAL POWER
Environmental Impacts
Investigation of tidal power, Cobscook Bay, Maine. Environmental Appendix, 8:29472 (R:US)

TIGHT SANDS
See PERMEABILITY
SANDSTONES

TIME-OF-FLIGHT SPECTROMETERS
Data Processing
Software for real time system of the DISK-2 spectrometer for investigation of cumulative particle production, 8:30285 (R:SU:In Russian)

TIME-REVERSAL INVARIANCE
See T INVARIANCE

TIN COMPLEXES
Chemical Reactions
Kinetic, magnetic and Moessbauer studies on porphyrin systems. Final report, 8:30040 (R:US)

TIN OXIDES
Crystal Structure
Neutron profile refinement of the structures of Li_2SnO_3 and Li_2ZrO_3, 8:30005 (J:US)

TIPVANE ROTORS
Aerodynamics
Aerodynamic research on tipvane wind turbines, 8:29483 (R:US)

TISSUE-EQUIVALENT DETECTORS
Ionization Chambers
Area radiation monitor at the intense pulsed-neutron source, 8:30277 (R:US)
Neutron Detectors
Area radiation monitor at the intense pulsed-neutron source, 8:30277 (R:US)

TITANIUM
Biological Fouling
Biofouling and corrosion stdies at Keahole Point, Hawaii (1978-1980), 8:29396 (RA:US)
Microbial deposits, resistant to removal by the M.A.N. brush, on aluminum and titanium heat exchanger surfaces exposed to ambient seawater, 8:29394 (RA:US)
Microbiofouling of aluminum and titanium ocean thermal energy conversion (OTEC) evaporator tubes at a potential OTEC site, 8:29393 (RA:US)
Cleaning
Microbial deposits, resistant to removal by the M.A.N. brush, on aluminum and titanium heat exchanger surfaces exposed to ambient seawater, 8:29394 (RA:US)
Corrosion
Biofouling and corrosion stdies at Keahole Point, Hawaii (1978-1980), 8:29396 (RA:US)
Redox Reactions
Investigation on the oxidation state and the behavior of molybdenum in silicate glass, 8:29972 (BA:US)

Solvent Extraction
Determination of extraction equilibria for several metals in the development of a process designed to recover aluminum and other metals from coal combustion ash, 8:28821 (J:NL)
Sorptive Properties
Chemisorption of hydrogen on titanium: embedding theory and comparisons with small clusters, 8:30024 (J:NL)
TITANIUM ALLOYS
See also ALLOY-A-286
NIMONIC PE16
TITANIUM BASE ALLOYS
Thermal Conductivity
Thermal conductivity of niobium-titanium alloys in mixed state, 8:29882 (R:SU:In Russian)
TITANIUM BASE ALLOYS
Crevice Corrosion
Crevice corrosion of titanium alloy TiCode-12 in simulated rock salt brine at 150°C, 8:29886 (R:US)
Review of waste package verification tests. Semiannual report, April-September 1982, 8:29156 (R:US)
Electrochemical Corrosion
Review of waste package verification tests. Semiannual report, April-September 1982, 8:29156 (R:US)
Hydrogen Embrittlement
Review of waste package verification tests. Semiannual report, April-September 1982, 8:29156 (R:US)
Magnetic Susceptibility
Proton NMR and magnetic susceptibility study of TiCrsub(1.8)Hsub(x), 8:29891 (J:NL)
Pitting Corrosion
Review of waste package verification tests. Semiannual report, April-September 1982, 8:29156 (R:US)
Stress Corrosion
Review of waste package verification tests. Semiannual report, April-September 1982, 8:29156 (R:US)
TITANIUM BORIDES
Erosion
Material coatings for valves: coal-liquefaction components and instrumentation. Final report, October 1, 1981-September 30, 1982, 8:28815 (R:US)
TITANIUM HYDRIDES
Electronic Structure
Application of EELS to the study of metal-hydrogen systems, 8:29942 (J:US)
Ion Sources
Ion-source development at Argonne, 8:30633 (R:US)
Neutron Reactions
Crystal analyzer TOF spectrometer (CAT) for high energy incoherent neutron scattering, 8:30786 (RA:US)
Phase Studies
Application of EELS to the study of metal-hydrogen systems, 8:29942 (J:US)
TITANIUM OXIDES
See also ILMENITE
PEROVSKITE
PYROCHLORE
ZIRCONOLITE
Catalytic Effects
Promoter modifications of catalytic activity and selectivity. Progress report, April 1, 1982-March 31, 1983, 8:29288 (R:US)
Crystal Structure
Investigation of titanium in metamict Nb-Ta-Ti oxides using the extended x-ray absorption fine structure technique, 8:29978 (BA:US)
Crystal-Phase Transformations
Neutron scattering studies of pretransitional phenomena in structural phase transformations, 8:29940 (J:US)
Radiation Effects
Investigation of titanium in metamict Nb-Ta-Ti oxides using the extended x-ray absorption fine structure technique, 8:29978 (BA:US)
TIWI GEOTHERMAL FIELD
Geothermal Power Plants
Commercial development of the TIWI and MAK-BAN geothermal fields, 8:29454 (RA:US)
TMPN
See ORGANIC OXYGEN COMPOUNDS
TMR REACTORS
Impurities
Charge-exchange pumping of thermalized alpha particles in steady-state tandem-mirror reactors, 8:30882 (J:GB)
Ion Sources
Light-atom neutral beams for tandem mirror end plugs, 8:30934 (J:AT)
Magnet Coils
Tandem mirror reactors with thermal barriers, 8:30960 (BA:XA)
Q-Value
Tandem mirror reactors with thermal barriers, 8:30960 (BA:XA)
TMX DEVICES
ECR Heating
Power deposition profiles in Maxwellian magneto-active plasmas, 8:30867 (R:US)
End Effects
End-wall plasma characteristics in the tandem mirror experiment, 8:30874 (J:AT)
ICR Heating
Monte Carlo studies of tandem mirror plasmas interacting with waves in the ion cyclotron range of frequencies (ICRF). Progress report, January 1, 1983-March 31, 1983, 8:30850 (R:US)
Neutron Source Facilities
Tandem mirrors for neutron production, 8:30931 (R:US)
Reviews
Lawrence Livermore National laboratory tandem mirror program, 8:30951 (J:US)
Overview and direction in the tandem mirror program, 8:30932 (R:US)
TOA
Chemical Reactions
Characterization of molybdenum interfacial crud in a uranium mill that employs tertiary-amine solvent extraction, 8:29104 (R:US)
Synthesis
Characterization of molybdenum interfacial crud in a uranium mill that employs tertiary-amine solvent extraction, 8:29104 (R:US)
TOBACCO SMOKES
Physical Properties
Properties of radon progeny aerosols in mainstream cigarette smoke and the alpha dose at segmental bifurcations of smokers, 8:30513 (RA:US)
Tissue Distribution
Properties of radon progeny aerosols in mainstream cigarette smoke and the alpha dose at segmental bifurcations of smokers, 8:30513 (RA:US)
TOCOPHEROLS
See VITAMIN E
TOKAMAK DEVICES
See also ALCATOR DEVICE
SPHEROMAK DEVICES
TFR TOKAMAK
Bernstein Mode
Efficient ion heating via finite-Larmor-radius ICRF, 8:30861 (R:US)
Divertors
Mechanical divertor experiments in Macrotor, 8:30948 (J:AT)
Electron Density
8-Channel interferometer for the measurement of electron density profiles in a Tokamak plasma, 8:30941 (J:CH:In German)
ICR Heating
Antenna-plasma coupling theory for ICRF heating, 8:30892 (R:US)
Efficient ion heating via finite-Larmor-radius ICRF, 8:30861 (R:US)
ICRF heating, particle transport and fluctuations in tokamaks, 8:30877 (BA:XA)
Impurities
Dependence of the tokamak chamber sputtering intensity on its cleaning technique, 8:30903 (R:SU:In Russian)
Impurity injection experiments on the Alcator C tokamak, 8:30938 (J:AT)

Inertial Confinement
Plasma physics and controlled nuclear fusion research. Summaries of the ninth IAEA international conference held in Baltimore, USA, 1-8 September 1982, 8:30936 (J:AT)
Ion Spectroscopy
Atomic physics in tokamak plasmas, 8:30942 (J:NL)
Kink Instability
High-beta tokamak stability studies, 8:30880 (BA:XA)
Limiters
Mechanical divertor experiments in Macrotor, 8:30948 (J:AT)
Mach-Zehnder Interferometer
8-Channel interferometer for the measurement of electron density profiles in a Tokamak plasma, 8:30941 (J:CH:In German)
Magnet Coils
To the calculation of the mutual inductance coefficient in a toroidal-sector magnet system, 8:30917 (R:SU:In Russian)
Magnetic Field Configurations
Closed expressions for the magnetic field of toroidal multipole configurations, 8:30924 (R:US)
Neoclassical Transport Theory
Collisional diffusion in a torus with imperfect magnetic surfaces, 8:30862 (R:US)
Neutral Atom Beam Injection
Effects of neutral-beam co- and counter-injection on impurity radiation from ISX-B plasmas, 8:30935 (J:AT)
Runaway Electrons
Leakage of runaway electrons from tokamaks, 8:30946 (J:AT)
Superconducting Magnets
Tokamak-7 device structure, 8:30902 (R:SU:In Russian)
TORE SUPRA: programme of development, qualifying tests. Summary and results, 8:30897 (R:FR)
Tearing Instability
Low-m magnetic modes activity and disruptions in Tokamaks discharges, 8:30856 (R:FR)
Transport Theory
Collisional diffusion in a torus with imperfect magnetic surfaces, 8:30862 (R:US)

TOKAMAK ETF
Specifications
Scope and status of the USA Engineering Test Facility including relevant TFTR research and development, 8:30974 (BA:XA)

TOKAMAK FONTENAY-AUX-ROSES
See TFR TOKAMAK

TOKAMAK TYPE REACTORS
See also DOUBLET REACTORS
INTOR TOKAMAK
JET REACTORS
JT-60 REACTORS
PLT DEVICES
STARFIRE TOKAMAK
TOKAMAK ETF
Current-Drive Heating
Relativistic two-dimensional theory of rf current drive, 8:30853 (R:US)
Design
FED baseline engineering studies report, 8:30919 (R:US)
Engineering
Engineering testing requirements in FED/INTOR, 8:30888 (R:US)
Impurities
Key issues of FED/INTOR impurity control system, 8:30889 (R:US)
Limiters
Key issues of FED/INTOR impurity control system, 8:30889 (R:US)
Neutron Transport Theory
Development of the two-dimensional cross-section sensitivity and uncertainty analysis code SENSIT-2D with applications to the FED, 8:30914 (R:US)
Poloidal Divertors
Key issues of FED/INTOR impurity control system, 8:30889 (R:US)
Superconducting Magnets
Development of superconducting magnets for use in nuclear fusion machines, 8:30970 (BA:XA)

TOLAN
Polymerization
Electron paramagnetic resonance studies of thermally produced radicals in phenylacetylene, 8:30049 (J:US)

TOLUENE
Chemical Preparation
Preparation of multitritiated arenes, 8:30091 (J:GB)
Double Labelling
Preparation of multitritiated arenes, 8:30091 (J:GB)
Solubility
Amphiphilic properties of low-equivalent-weight organic salts, 8:30039 (R:US)
Thermodynamic Properties
Correlations for estimating critical constants, acentric factor, structure factor, and dipole moment for undefined fractions, 8:28831 (RA:US)

TORSATRON STELLARATOR
Equilibrium Plasma
Equilibrium and stability studies for high-beta plasmas in torsatron/heliotron devices, 8:30848 (R:US)
Plasma Instability
Equilibrium and stability studies for high-beta plasmas in torsatron/heliotron devices, 8:30848 (R:US)
Three-Dimensional Calculations
Equilibrium and stability studies for high-beta plasmas in torsatron/heliotron devices, 8:30848 (R:US)

TOTAL-ABSORPTION SPECTROMETERS
See SHOWER COUNTERS

TRACT C-A PROTOTYPE OIL SHALE PROJECT
See RIO BLANCO OIL SHALE PROJECT

TRANS 104 ELEMENTS
Spontaneous Fission
Rapid disappearance of shell effects in the fission of transfermium nuclei, 8:30776 (R:US)

TRANSFER (HEAT)
See HEAT TRANSFER

TRANSFER (IN ENVIRONMENT)
See RADIONUCLIDE MIGRATION

TRANSFER (IN ORGANISM)
See RADIONUCLIDE KINETICS

TRANSFORMATIONS (ONCOGENIC)
See ONCOGENIC TRANSFORMATIONS

TRANSFORMERS
Design
Evaluation of advanced technologies for power transformers. Final report, Part 2, June 1, 1979-June 30, 1981, 8:29528 (R:US)
Technology Assessment
Evaluation of advanced technologies for power transformers. Final report, Part 2, June 1, 1979-June 30, 1981, 8:29528 (R:US)

TRANSIENT SPECIES
See REACTION INTERMEDIATES

TRANSIENTS
Computer Codes
NLS: a system identification package for transient signals. Description and user's manual, 8:31004 (R:US)
Heat Transfer
Analysis of steam-generator transients with RETRAN-02, 8:29658 (RA:US)
Analysis of load rejection transient in a 2436MWt BWR/4 plant with RETRAN-01/02, 8:29669 (RA:US)
BWR stability analysis with RETRAN, 8:29662 (RA:US)
Exact analytic technique for three-dimensional to one-dimensional cross section collapsing, 8:29667 (RA:US)
Integrated Compartment Method appication to the transient heat transfer in gas-cooled reactor, 8:29569 (R:US)
Investigation of the one-dimensional reactor kinetics model in RETRAN-02 MOD-002 (PWR), 8:29668 (RA:US)
Numerical solution method improvements for RETRAN, 8:29644 (RA:US)
Prediction of GE-ATLAS transient boiling transition data using RETRAN-02/RETRAN-15F (BWR), 8:29650 (RA:US)
PWR systems transient analysis, 8:29637 (R:US)

RETRAN-01/RETRAN-02 comparison calculations for PWR transients, 8:29659 (RA:US)
RETRAN-01/-02 analysis of a dual recirculation pump trip transient in a 2436-MWt BWR/4 plant, 8:29663 (RA:US)
RETRAN-02 calculations of operational transients in LOFT (PWR), 8:29647 (RA:US)
RETRAN analyses for improving plant procedures and operator training (PWR; BWR), 8:29654 (RA:US)
RETRAN nonequilibrium two-phase flow model for operational transient analyses (PWR; BWR), 8:29643 (RA:US)

Hydraulics
Analysis of steam-generator transients with RETRAN-02, 8:29658 (RA:US)
Analysis of load rejection transient in a 2436MWt BWR/4 plant with RETRAN-01/02, 8:29669 (RA:US)
BWR stability analysis with RETRAN, 8:29662 (RA:US)
Exact analytic technique for three-dimensional to one-dimensional cross section collapsing, 8:29667 (RA:US)
Investigation of the one-dimensional reactor kinetics model in RETRAN-02 MOD-002 (PWR), 8:29668 (RA:US)
Numerical solution method improvements for RETRAN, 8:29644 (RA:US)
Prediction of GE-ATLAS transient boiling transition data using RETRAN-02/RETRAN-15F (BWR), 8:29650 (RA:US)
PWR systems transient analysis, 8:29637 (R:US)
RETRAN-01/RETRAN-02 comparison calculations for PWR transients, 8:29659 (RA:US)
RETRAN-01/-02 analysis of a dual recirculation pump trip transient in a 2436-MWt BWR/4 plant, 8:29663 (RA:US)
RETRAN-02 calculations of operational transients in LOFT (PWR), 8:29647 (RA:US)
RETRAN analyses for improving plant procedures and operator training (PWR; BWR), 8:29654 (RA:US)
RETRAN nonequilibrium two-phase flow model for operational transient analyses (PWR; BWR), 8:29643 (RA:US)

Meetings
Conference proceedings: second international RETRAN conference (PWR; BWR), 8:29642 (R:US)

Neutron Flux
Investigation of the one-dimensional reactor kinetics model in RETRAN-02 MOD-002 (PWR), 8:29668 (RA:US)

Power Distribution
Prediction of GE-ATLAS transient boiling transition data using RETRAN-02/RETRAN-15F (BWR), 8:29650 (RA:US)

Temperature Gradients
Integrated compartment method application to the transient heat transfer in gas-cooled reactor, 8:29573 (R:US)

Two-Phase Flow
Numerical solution method improvements for RETRAN, 8:29644 (RA:US)
RETRAN nonequilibrium two-phase flow model for operational transient analyses (PWR; BWR), 8:29643 (RA:US)

TRANSISTOR AMPLIFIERS
MVA amplifier used for plasma position control in the WEGA tokamak, 8:30896 (R:FR)

TRANSITION ELEMENT COMPOUNDS
See also CHROMIUM COMPOUNDS
MANGANESE COMPOUNDS
MOLYBDENUM COMPOUNDS
NICKEL COMPOUNDS
PLATINUM COMPOUNDS
RHENIUM COMPOUNDS
TUNGSTEN COMPOUNDS

Catalytic Effects
Transition-metal-oxide coated titanium electrodes for redox batteries. Final report, 8:29787 (R:US)

TRANSITIONS (ENERGY LEVEL)
See ENERGY-LEVEL TRANSITIONS

TRANSMISSION (HEAT)
See HEAT TRANSFER

TRANSMISSION LINES
See POWER TRANSMISSION LINES

TRANSPARENCY
See OPACITY

TRANSPLUTONIUM ELEMENTS
See also AMERICIUM
ELEMENT 104
TRANS 104 ELEMENTS

Isotope Production
Production of transplutonium elements in the high flux isotope reactor, 8:30093 (J:US)

TRANSPORT (IN ORGANISMS)
See RADIONUCLIDE KINETICS

TRANSPORT (NEUTRON)
See NEUTRON TRANSPORT

TRANSPORT THEORY
See also CHARGED-PARTICLE TRANSPORT THEORY
NEOCLASSICAL TRANSPORT THEORY
NEUTRON TRANSPORT THEORY

Boundary-Value Problems
Automorphism theorems and half-range theory, 8:30826 (R:US)

Factorization
Factorization methods in linear-transport theory, 8:30789 (R:US)

Hamiltonians
Collisional diffusion in a torus with imperfect magnetic surfaces, 8:30862 (R:US)

Invariant Imbedding
On the advantages of invariant imbedding for the calculation of deep-penetration problems, 8:30798 (J:US)

TRANSPORTATION SECTOR

Energy Demand
Transport energy in New Zealand's overseas trade. A review up to 1980, 8:29817 (R:NZ)

Fuel Consumption
Highway fuel-consumption model. Ninth quarterly report, 8:29816 (R:US)

TRANSURANIUM WASTES
See ALPHA-BEARING WASTES

TRAVEL

Conflicts of Interest
Investigation of allegations made in a fourteen-page document, 8:29730 (R:US)

TREES
See also PINES
POPLARS

Spatial Distribution
Habitat types in the Pinon-Juniper woodland of northern New Mexico, 8:30372 (RA:US)

TRETAMINE
See ALKYLATING AGENTS

TRIAZINES

Fluorination
Aromatic fluorinations suitable for fluorine-18 labeling of estrogens, 8:30092 (J:US)

TRIBUTYL PHOSPHATE
See TBP

TRIETHYLENEMELAMINE
See ALKYLATING AGENTS

TRIOCTYLAMINE
See TOA

TRIPHENYLENE

Thermodynamic Properties
Correlations for estimating critical constants, acentric factor, structure factor, and dipole moment for undefined fractions, 8:28831 (RA:US)

TRIPLET PARTICLES
See QUARKS

TRITIATED COMPOUNDS
See TRITIUM COMPOUNDS

TRITIUM

Chronic Exposure
The turnover of tritium in cell nuclei, chromatin, DNA, and histone, 8:30520 (J:US)

Energy-Level Transitions
Charge screening effects in mesic molecules of hydrogen isotopes, 8:30641 (R:SU:In Russian)

Environmental Effects
Resolution of a unique transport situation with tritium air sampling, 8:30347 (J:US)

Isotope Production
Vanadium hydride deuterium-tritium generator (Patent), 8:29266 (P:US)
Materials Testing
Status of tritium technology development for magnetic-fusion energy, 8:30915 (R:US)
Monitoring
Tritium monitoring within the reactor hall of a DT fusion reactor, 8:30908 (R:US)
Muonic Molecules
Charge screening effects in mesic molecules of hydrogen isotopes, 8:30641 (R:SU:In Russian)
Prenatal Exposure
The turnover of tritium in cell nuclei, chromatin, DNA, and histone, 8:30520 (J:US)
Radiochromatography
Gas chromatographic shift of tritium-labeled compounds - an application of gas liquid radiochromatography, 8:29990 (J:GB)
Sampling
Resolution of a unique transport situation with tritium air sampling, 8:30347 (J:US)
Tissue Distribution
Relative amount of organic and inorganic tritium present in the tissues of animals exposed to tritium through their drinking water or through their diet, 8:30367 (J:BE)
Uses
Applications developed for byproduct ^{85}Kr and tritium, 8:29283 (R:US)

TRITIUM COMPOUNDS
Chemical Preparation
Preparation of multitritiated arenes, 8:30091 (J:GB)
Tracer Techniques
Synthesis of histone H1° in synchronized Chinese hamster cells, 8:30404 (RA:US)

TRITIUM EXTRACTION PLANT
Development of tritium technology for United States magnetic fusion energy programme, 8:30971 (BA:XA)

TRITIUM RECOVERY
In thermonuclear reactors and/or devices.
Research Programs
Development of tritium technology for United States magnetic fusion energy programme, 8:30971 (BA:XA)

TROMBE WALLS
Retrofitting
Demonstration of a retrofit solar heating system on the Jemez Pueblo Civic Center, 8:29415 (R:US)

TROPOSPHERE
Aerial Surveying
Satellite measurements of atmospheric aerosols. Annual report 1 Oct 81-30 Nov 82, 8:30329 (R:US)

TRU WASTES
See ALPHA-BEARING WASTES

TRUCKS
Comparative Evaluations
Coal transportation: the economic alternatives, 8:28940 (BA:US)

TRX-1
See REVERSE-FIELD PINCH

TSL PROCESS
Bench-Scale Experiments
Heavy-recycle-solvent studies in two-stage coal liquefaction. Third technical progress report, December 11, 1982-March 10, 1983, 8:28808 (R:US)
Controlled Atmospheres
Heavy-recycle-solvent studies in two-stage coal liquefaction. Third technical progress report, December 11, 1982-March 10, 1983, 8:28808 (R:US)
Organic Solvents
Heavy-recycle-solvent studies in two-stage coal liquefaction. Third technical progress report, December 11, 1982-March 10, 1983, 8:28808 (R:US)
Yields
Heavy-recycle-solvent studies in two-stage coal liquefaction. Third technical progress report, December 11, 1982-March 10, 1983, 8:28808 (R:US)

TSUKUBA KEK SYNCHROTRON
See KEK SYNCHROTRON

TUBES
For objects of tubular shape; not for DRIFT TUBES, ELECTRON TUBES or IMAGE STORAGE TUBES.
Corrosion Denting
Investigation of phosphate-sludge interactions. Final report (PWR), 8:29562 (R:US)
Cracks
Chemical aspects of iodine-induced stress corrosion cracking of Zircaloys, 8:29900 (J:US)
Leaks
Steam-generator tube-plugging and tube-sleeving criteria: assessment of current practices (PWR), 8:29559 (R:US)
Mechanical Vibrations
Experiments on tubes conveying fluid, 8:30127 (R:US)
Repair
Steam-generator tube-plugging and tube-sleeving criteria: assessment of current practices (PWR), 8:29559 (R:US)
Stability
Experiments on tubes conveying fluid, 8:30127 (R:US)
Strains
Steam-generator tube-plugging and tube-sleeving criteria: assessment of current practices (PWR), 8:29559 (R:US)
Stress Analysis
Fatigue performance of Ni-Cr-Fe Alloy 600 under typical PWR steam-generator conditions. Final report, 8:29561 (R:US)
Stress Corrosion
Chemical aspects of iodine-induced stress corrosion cracking of Zircaloys, 8:29900 (J:US)
Supports
Diffusion and hideout in crevices. Final report (PWR), 8:29564 (R:US)

TUBES (CONDUITS)
See PIPES

TUMOR CELLS
Cell Proliferation
The role of glucose in the growth of 9L multicell tumor spheroids, 8:30430 (J:US)
Growth
The role of glucose in the growth of 9L multicell tumor spheroids, 8:30430 (J:US)
Hybridization
Molecular mechanism of extinction of liver-specific functions in mouse hepatoma x rat fibroblast hybrids: extinction of the albumin gene, 8:30438 (J:US)
Implants
Role of anchorage in the expression of tumorigenicity of untransformed mouse cell lines, 8:30431 (J:US)
Metabolism
The glucose distribution in 9L rat brain multicell tumor spheroids and its effect on cell necrosis, 8:30441 (J:US)
Necrosis
The glucose distribution in 9L rat brain multicell tumor spheroids and its effect on cell necrosis, 8:30441 (J:US)

TUMOR PROMOTERS
Radiosensitivity Effects
Studies on the multistage nature of radiation carcinogenesis, 8:30525 (J:US)

TUMORS
See NEOPLASMS

TUNGSTEN
Neutron Reactions
Fast-neutron capture-cross-section measurements with the Argonne National Laboratory large-liquid-scintillator tank, 8:30752 (RA:US)
Monte Carlo study of the energy deposition of a flux of spallation neutrons in various samples, 8:29281 (RA:US)

TUNGSTEN ALLOYS
See also HASTELLOY C
HASTELLOY X
Fabrication
Method of fabricating thin-walled articles of tungsten-nickel-iron alloy (Patent), 8:29895 (P:US)

TUNGSTEN COMPOUNDS
See also TUNGSTEN OXIDES
Chemical Bonds
Infrared intensity and the CO-metal bond, 8:30018 (J:NL)
TUNGSTEN OXIDES
Infrared Spectra
Infrared spectra of matrix-isolated tungsten oxides, 8:30019 (J:US)
TURBINE BLADES
Aerodynamics
High Temperature Turbine Technology Program. Phase II. Technology test and support studies. Technical progress report, October 1, 1982-December 31, 1982, 8:29495 (R:US)
Composite Materials
Fatigue testing of low-cost fiberglass composite wind turbine blade materials, 8:29480 (R:US)
Cooling
High temperature turbine technology program. Phase II. Technology test and support studies. Technical progress report, April 1, 1982-June 30, 1982, 8:29493 (R:US)
High Temperature Turbine Technology Program. Phase II. Technology test and support studies. Technical progress report, July 1, 1982-September 30, 1982, 8:29494 (R:US)
Design
High temperature turbine technology program. Phase II. Technology test and support studies. Technical progress report, April 1, 1982-June 30, 1982, 8:29493 (R:US)
Oxidation
High temperature turbine technology program. Phase II. Technology test and support studies. Technical progress report, April 1, 1982-June 30, 1982, 8:29493 (R:US)
High Temperature Turbine Technology Program. Phase II. Technology test and support studies. Technical progress report, October 1, 1982-December 31, 1982, 8:29495 (R:US)
TURBINES
See also GAS TURBINES
ROTARY SEPARATOR TURBINES
STEAM TURBINES
VELOCITY-PUMPS REACTION TURBINES
WIND TURBINES
Fluid Flow
Pressure balanced drag turbine mass flow meter (Patent), 8:29473 (P:US)
TURBOGENERATORS
Rotors
Torsional fatigue life of power-plant-shaft material. Final report, Task I, 8:29498 (R:US)
Shafts
Torsional fatigue life of power-plant-shaft material. Final report, Task I, 8:29498 (R:US)
TURBULENCE
Daily Variations
Variation of turbulence within the TIBL, 8:30323 (R:US)
TURNOVER (RADIONUCLIDES)
See RADIONUCLIDE KINETICS
TWO-PHASE FLOW
Computerized Simulation
Simulation of thermal transient induced pipe flow stratification using COMMIX-2, 8:29613 (J:US)
Flow Models
Hydrodynamics of annular-dispersed flow, 8:30131 (J:US)

U

U-GAS PROCESS
Comparative Evaluations
Engineering-support services for the DOE/GRI Coal-Gasification Research Program. Quarterly technical progress report, July-September 1980, 8:28795 (R:US)
ULTRASONIC TESTING
Data Processing
Digital signal-processing techniques used for improving the resolution of B-scans in 1 second or less per waveform, 8:30135 (R:US)
ULTRAVIOLET RADIATION
Biological Effects
Psoralen-plus-light damage and repair in transforming DNA of Bacillus subtilis, 8:30524 (BA:US)
Genetic Effects
Sister chromatid exchange, DNA repair, and single-gene mutation, 8:30564 (J:US)
Synergism
Effect of shale oil and ultraviolet light on delayed hypersensitivity in mice, 8:30536 (RA:US)
UNDERGROUND BUILDINGS
See EARTH-COVERED BUILDINGS
UNDERGROUND EXPLOSIONS
Shock Waves
Recent studies of airblast from buried charges, for environmental charges, for environmental protection from HEST events, 8:30318 (R:US)
UNDERGROUND HEAT DISTRIBUTION SYSTEMS
See HEAT DISTRIBUTION SYSTEMS
UNDERGROUND MINING
See also LONGWALL MINING
Drivage, development and support of roadways and faces in deep mines - 1,000 metres and more and consequently in more difficult mining, geological and atmospheric conditions, 8:28890 (R:XU)
Automation
Coal-getting systems not requiring the presence of men at the face at all times and methods of working coal which do not require the presence of man underground, 8:28893 (R:XU)
Backfilling
Ideal requirements of packs, 8:28897 (R:XE)
Ground Subsidence
Exchange of experience in coal extraction under buildings and industrial plants, 8:28892 (R:XU)
Heading Machines
Continuous mining system: stone and stone/coal headings, 8:28896 (R:XE)
Mine Haulage
Removal of fines from recirculation water in a coal slurry system, 8:28962 (BA:US)
Mine Roadways
Results of the first trial single entry development at Ellalong Colliery, 8:28881 (R:AU)
Mining Equipment
Causes and effects of escalating prices for deep-mine machinery, 8:28898 (R:US)
Integrated mechanization of winning, supporting and stowing in thick seams, 8:28895 (R:XE:In German)
Optimization
Integrated mechanization of winning, supporting and stowing in thick seams, 8:28895 (R:XE:In German)
Packings
Ideal requirements of packs, 8:28897 (R:XE)
Seismic Noise
Microseismic monitoring at 53 level, West No. 2 Mine, Collinsville - a feasibility study, 8:28903 (B:AU)
Statistical Data
Concentration indices in the European coal industries, 8:28891 (R:XU)
Strata Control
Pre-tensioning rock bolts, 8:28901 (B:AU)
UNEMPLOYMENT
See EMPLOYMENT
UNIFIED GAUGE MODELS
Lattice Field Theory
Plaquette formulation and the Bianchi identity for lattice gauge theories, 8:30722 (J:NL)
Supersymmetry
Quantum symmetries in particle interactions, 8:30714 (R:SU:In Russian)
Symmetry Breaking
Effect of scalar partons at short distances in unified theories with spontaneously broken colour symmetry, 8:30708 (R:IT)

UNIFIED-FIELD THEORIES
Prior to March 1983 this concept was indexed to EINSTEIN-SCHROEDINGER THEORY or UNIFIED GAUGE MODELS.
Supersymmetry
Local supersymmetry and the problem of the mass scales, 8:30718 (R:US)
UNITED KINGDOM
PWR Type Reactors
LOFTRAN/RETRAN comparison calculations for a postulated loss of feedwater ATWS in the Sizewell B PWR, 8:29660 (RA:US)
Radioactive Waste Management
Development of chemical methods of radioactive waste management for UK power reactor sites, 8:29205 (BA:US)
Low and intermediate level waste management practices in the United Kingdom, 8:29188 (BA:US)
Research Programs
34th meeting of the International Committee for Coal Petrology, Pau, France: and aspects of carbonisation and petrographic research at selected centres in Europe, 8:28822 (R:AU)
Waste Product Utilization
International aspects of development of the uses of fly ash with cement (Denmark, India, France, Great Britain, Canada, Japan, South Africa, Australia, USA, China, Poland), 8:28857 (RA:US)
UNITED STATES OF AMERICA
See USA
UPSILON RESONANCES
Many-Body Problem
Few-body system and particle resonances, 8:30682 (R:IT)
URACILS
Structural Chemical Analysis
Trans-anti photodimer of 1-methylthymine: direct evidence of x-ray cleavage of dimer into monomers in the crystalline state, 8:30055 (J:DK)
URANIUM
Adsorption
Uranium extraction from seawater, 8:29105 (R:DE:In German)
Diffusion
Laboratory measurements of contaminant attenuation of uranium mill tailings leachates by sediments and clay liners, 8:29249 (R:US)
Energy Demand
World uranium supply and demand: impact of Federal policies, 8:29119 (R:US)
Energy Supplies
World uranium supply and demand: impact of Federal policies, 8:29119 (R:US)
Leaching
Leaching of actinides from simulated nuclear waste glass, 8:29229 (BA:US)
Mass Spectroscopy
Mobile mass spectrometry laboratory for isotopic ratio measurements of uranium and plutonium, 8:30310 (J:NL)
Neutron Reactions
Measurements of the spallation and fission product production for depleted uranium and natural lead targets bombarded by 1100 MeV protons, 8:29278 (RA:US)
Radiation Scattering Analysis
Utilization of charged particle backscattering to study the near surface region of glasses. Application to depth profiling of lanthanium, cerium, throium and uranium induced by aqueous leaching, 8:29994 (BA:US)
Radioecological Concentration
Investigation of radionuclide concentrations in tissues of elk utilizing Los Alamos National Laboratory lands, 8:30364 (RA:US)
Recovery
Process for recovering uranium from waste hydrocarbon oils containing the same (Patent; Uranium contaminated lubricating oils from gaseous diffusion compressors), 8:29107 (P:US)
Uranium extraction from seawater, 8:29105 (R:DE:In German)
Separation Processes
Process for recovering uranium from waste hydrocarbon oils containing the same (Patent; Uranium contaminated lubricating oils from gaseous diffusion compressors), 8:29107 (P:US)
Solvent Extraction
Determination of extraction equilibria for several metals in the development of a process designed to recover aluminum and other metals from coal combustion ash, 8:28821 (J:NL)
URANIUM 233 TARGET
Neutron Reactions
Status of neutron capture data of ^{233}U, ^{235}U and ^{239}Pu in the unresolved resonance region, 8:30770 (RA:US)
URANIUM 234
Dissolution
Isotopic fractionation of thorium and uranium upon leaching of monozite: alpha-recoil damage effects, 8:29977 (BA:US)
Inhalation
Estimation of the bronchial cancer risk from the inhalation of long-lived alpha emitting radionuclides, 8:30516 (RA:US)
URANIUM 235
Inhalation
Estimation of the bronchial cancer risk from the inhalation of long-lived alpha emitting radionuclides, 8:30516 (RA:US)
URANIUM 235 TARGET
Neutron Reactions
Measurement of neutron capture cross section and alpha of ^{235}U from 2 to 85 keV, 8:30772 (RA:US)
Status of neutron capture data of ^{233}U, ^{235}U and ^{239}Pu in the unresolved resonance region, 8:30770 (RA:US)
URANIUM 238
Dissolution
Isotopic fractionation of thorium and uranium upon leaching of monozite: alpha-recoil damage effects, 8:29977 (BA:US)
Excitation
Doppler-free two-photon excitation of ^{238}U, 8:30623 (R:GB)
Inhalation
Estimation of the bronchial cancer risk from the inhalation of long-lived alpha emitting radionuclides, 8:30516 (RA:US)
Resonance Absorption
Doppler-free two-photon excitation of ^{238}U, 8:30623 (R:GB)
URANIUM 238 TARGET
Neutron Reactions
Fast-neutron capture in ^{238}U and ^{232}Th, 8:30768 (RA:US)
Fast neutron capture in actinide isotopes: recent results from Karlsruhe, 8:30771 (RA:US)
URANIUM ALLOYS
See also URANIUM BASE ALLOYS
Structural Chemical Analysis
Actinide 5f systems: experimental determination of the magnetic response function, 8:30094 (BA:US)
URANIUM ARSENIDES
Structural Chemical Analysis
Actinide 5f systems: experimental determination of the magnetic response function, 8:30094 (BA:US)
URANIUM BASE ALLOYS
Extrusion
Extrusion-formed uranium-2.4 wt % article with decreased linear thermal expansion and method for making the same (Patent application), 8:29896 (P:US)
URANIUM DEPOSITS
Exploration
Emanometric studies, 8:29101 (RA:US)
Geochemical studies, 8:29100 (RA:US)
Geologic studies, 8:29097 (RA:US)
Geophysical studies, 8:29099 (RA:US)

Coal slurry dewatering operations wastewater treatability studies, 8:28948 (BA:US)
Processing needs and methodology for contaminated water streams from synfuels processes (Low-temperature coal gasification, direct coal liquefaction and oil shale retorting processes), 8:28866 (R:US)
Water quality as a factor in the reuse and disposal of coal slurry water, 8:28946 (BA:US)

WASTE-FUELED BOILERS
See REFUSE-FUELED BOILERS
WASTE-FUELED POWER PLANTS
See REFUSE-FUELED POWER PLANTS
WASTE-ROCK INTERACTIONS
Interaction of borosilicate glass and granodiorite at 100°C, 50 MPa: implications for models of radionuclide release, 8:29232 (BA:US)
Waste glass/repository interactions, 8:29226 (BA:US)
WATER
See also GROUND WATER
HEAVY WATER
SEAWATER
WASTE WATER
Autoionization
Self-ionization of water at high temperature and the thermodynamic properties of the ions, 8:30004 (J:US)
Charged-Particle Transport
Inelastic cross sections for electron interactions in liquid water, 8:30788 (R:US)
Chemical Reactions
Ab initio molecular orbital calculations on beryllium and magnesium atom reactions with water, 8:30030 (J:NL)
Electronic Structure
Electronic structure of Rydberg states of H_3, NeH, H_2F, H_3O, NH_4, and CH_5 molecules, 8:30012 (J:US)
Ion-Molecule Collisions
Studies of the structure and bonding of inorganic clusters, 8:30023 (J:NL)
Phase Studies
Coexistence curve of 2,6-lutidine + water, near its lower critical point, 8:30059 (J:NL)
Radiolysis
Effects of radiation damage and radiolysis on the leaching of vitrified waste, 8:29974 (BA:US)
One-electron redox potentials of phenols. Hydroxy- and aminophenols and related compounds of biological interest, 8:30081 (J:US)
Radiolytic oxidation of technetium dioxide, 8:30074 (R:US)
Refractivity
Coexistence curve of 2,6-lutidine + water, near its lower critical point, 8:30059 (J:NL)
Removal
Pressure charged airlift pump, 8:30107 (P:US)
Solubility
CNG acid-gas-removal process. Technical progress report No. 6, 1 February 1982-30 April 1982, 8:28802 (R:US)
Thermodynamic Properties
Correlations for estimating critical constants, acentric factor, structure factor, and dipole moment for undefined fractions, 8:28831 (RA:US)
Viscosity
Methane modeling: predicting the inflow of methane gas into coal mines. Quarterly technical progress report, October 1, 1982-December 31, 1982, 8:28888 (R:US)
WATER COOLANT
See WATER
WATER COOLED REACTORS

LWBR TYPE REACTORS
PWR TYPE REACTORS
R-3 REACTOR
Reactor Cooling Systems
BLAZER: a RELAP5/MODI post processor to generate force-time history input data for structural computer codes, 8:29701 (J:US)
WATER CURRENTS
Mathematical Models
Circulation study of the Western Florida Shelf, 8:29405 (RA:US)
Some results from a three-dimensional Gulf of Mexico circulation model, 8:29404 (RA:US)
WATER HAMMER
Wave Propagation
Calculating transient flows in slurry pipelines, 8:28951 (BA:US)
WATER HEATERS
See also SOLAR WATER HEATERS
Combustion Chambers
Ceramic boilers: ready for series production in 3 years, 8:29814 (TJ:GB)
WATER MODERATOR
See WATER
WATER QUALITY
Monitoring
Dissolved humic materials: photodegradation, sediment effects, and reactivity with phosphate and calcium carbonate precipitation, 8:30386 (J:DE)
WATER REMOVAL
Biological Effects
Effects of dewatering on chinook salmon redds: tolerance of four developmental phases to daily dewaterings, 8:30556 (J:US)
WATER RESERVOIRS
See also COOLING PONDS
Mathematical Models
Before-and-after studies of the effects of a power-plant installation on Lake LBJ: a numerical temperature model for Lake LBJ. Interim technical report No. 1, 8:30392 (R:US)
Temperature Distribution
Before-and-after studies of the effects of a power-plant installation on Lake LBJ: a numerical temperature model for Lake LBJ. Interim technical report No. 1, 8:30392 (R:US)
Vortex Flow
Analytic predictions of circulation and vortices at intakes. Final report, 8:29704 (R:US)
WATER TREATMENT
Comparative Evaluations
Coal slurry dewatering operations wastewater treatability studies, 8:28948 (BA:US)
WATER TREATMENT PLANTS
Energy Audits
Energy conservation at the West Dover, Vermont, Water Pollution Control facility. Special report, 8:29836 (R:US)
WATER WAVES
Focusing
Focusing of ocean wave energy and future challenges, 8:29476 (RA:US)
WATERBORNE PARTICLES
See PARTICULATES
WATERFLOODING
See also CAUSTIC FLOODING
Bench-Scale Experiments
Effects of mobile water on multiple contact miscible gas displacements, 8:29007 (J:US)
Water Requirements
Identification of water requirements for selected enhanced oil recovery methods, 8:28989 (R:US)
WATERSHEDS
Radionuclide Migration
Development of a simplified model to predict runoff, sediment yield, and contaminant transport in Mortandad Canyon, 8:30390 (RA:US)
WAVE ENERGY CONVERTERS
Design
DAM-ATOLL development progress, 8:29475 (RA:US)
Performance
Performance evaluation of generic wave energy systems, 8:29474 (RA:US)
WAVE EQUATIONS

Hamiltonians
Quantization, non-locality and lie-admissible formulations, 8:30824 (J:US)
Lie Groups
Quantization, non-locality and lie-admissible formulations, 8:30824 (J:US)
Locality
Quantization, non-locality and lie-admissible formulations, 8:30824 (J:US)
WAVE FORMS
Prediction of downhole waveforms, 8:29163 (R:US)

WAVE POWER
Resource Assessment
Chracteristics of waves in the Japan Sea, 8:29477 (RA:US)
WAVEGUIDES
Coatings
Surface modification to waveguides (Patent), 8:30949 (P:US)
WAZ 16
See NICKEL BASE ALLOYS
WEATHERIZATION
Federal Assistance Programs
Information and training program for state and regional SLAP organizations. Final report, February 1, 1981-January 31, 1983, 8:29768 (R:US)
Grants
Continuing management problems in the weatherization program in the State of Washington, 8:29728 (R:US)
Information Dissemination
Information and training program for state and regional SLAP organizations. Final report, February 1, 1981-January 31, 1983, 8:29768 (R:US)
Program Management
Continuing management problems in the weatherization program in the State of Washington, 8:29728 (R:US)
WEB GROWTH METHOD
See DENDRITIC WEB GROWTH METHOD
WECS
See WIND TURBINES
WEGA STELLARATOR
Remote Control
MVA amplifier used for plasma position control in the WEGA tokamak, 8:30896 (R:FR)
Transistor Amplifiers
MVA amplifier used for plasma position control in the WEGA tokamak, 8:30896 (R:FR)
WELDED JOINTS
Fracture Mechanics
Weld residual-stress redistribution near growing cracks. Final report (BWR), 8:29548 (R:US)
Residual Stresses
Weld residual-stress redistribution near growing cracks. Final report (BWR), 8:29548 (R:US)
Stress Corrosion
Weld residual-stress redistribution near growing cracks. Final report (BWR), 8:29548 (R:US)
WELDS
See WELDED JOINTS
WELL CASINGS
Deformation
Euler buckling of geothermal well casing, 8:29468 (R:US)
WELL DRILLING
Demonstration Programs
Contracts for field projects and supporting research on enhanced oil recovery and improved drilling technology. Progress review No. 32, quarter ending September 30, 1982, 8:28990 (R:US)
Drill Bits
Polycrystalline-diamond drill bits for Venezuelan oil-field application, 8:28993 (R:US)
WELL LOGGING
Review of well-logging techniques (For use in remedial action programs), 8:30317 (R:US)
WELL MAINTENANCE
See WELL SERVICING
WELL RECONDITIONING
See WELL SERVICING
WELL SERVICING
Pumps
Pressure charged airlift pump, 8:30107 (P:US)
WEST GERMANY
See FEDERAL REPUBLIC OF GERMANY
WEST VIRGINIA
Black Shales
Method to identify zones of intense jointing with application to the Parsons Lineament, West Virginia, 8:29059 (R:US)
Reservoir engineering aspects and resource-assessment methodology of eastern Devonian Gas shales, 8:29061 (R:US)
Shallow seismic investigations of Devonian-shale gas production, 8:29062 (R:US)
Study of hydrogeologic trends in exploration for Devonian-shale gas in the Midway-Extra gas field of Putnam County, West virginia, 8:29058 (R:US)
Geologic Structures
Method to identify zones of intense jointing with application to the Parsons Lineament, West Virginia, 8:29059 (R:US)
Natural Gas Deposits
Method to identify zones of intense jointing with application to the Parsons Lineament, West Virginia, 8:29059 (R:US)
Reservoir engineering aspects and resource-assessment methodology of eastern Devonian Gas shales, 8:29061 (R:US)
Shallow seismic investigations of Devonian-shale gas production, 8:29062 (R:US)
Study of hydrogeologic trends in exploration for Devonian-shale gas in the Midway-Extra gas field of Putnam County, West virginia, 8:29058 (R:US)
Oil Fields
CO_2 injection for tertiary oil recovery, Granny's Creek field, Clay County, West Virginia, 8:29011 (J:US)
WESTINGHOUSE GASIFICATION PROCESS
Combustion of medium heating value coal gas at turbine operating conditions, 8:28820 (J:US)
Comparative Evaluations
Engineering-support services for the DOE/GRI Coal-Gasification Research Program. Quarterly technical progress report, July-September 1980, 8:28795 (R:US)
Economics
Engineering-support services for the DOE/GRI Coal-Gasification Research Program. Quarterly technical progress report, July-September 1980, 8:28795 (R:US)
Monitoring
Engineering-support services for the DOE/GRI Coal-Gasification Research Program. Quarterly technical progress report, July-September 1980, 8:28795 (R:US)
Pilot Plants
Engineering support services for the DOE/GRI Coal Gasification Research Program. Quarterly technical progress report for the period October-December 1979, 8:28796 (R:US)
Risk Assessment
Engineering support services for the DOE/GRI Coal Gasification Research Program. Quarterly technical progress report for the period October-December 1979, 8:28796 (R:US)
Engineering-support services for the DOE/GRI Coal-Gasification Research Program. Quarterly technical progress report, July-September 1980, 8:28795 (R:US)
WHOLE-BODY COUNTERS
Data Acquisition Systems
SABRE: a computer-based system for the assessment of body radioactivity by photon spectrometry. Part 4., 8:30804 (R:GB)
WIND
Shear
Wind-shear climatology for large wind-turbine generators, 8:29478 (R:US)
WIND ENERGY CONVERSION SYSTEMS
See WIND TURBINES
WIND GENERATORS
See ELECTRIC GENERATORS
WIND TURBINES
WIND POWER
Availability
Wind-energy assessment for the western Pacific based on ship reports, 8:29479 (R:US)
WIND POWER PLANTS
Operation
Modification of power system operation for significant wind generation penetration, 8:29490 (BA:US)
Site Selection
Application examples for wind-turbine siting guidelines. Final report, 8:29482 (R:US)

WIND TURBINES
See also VERTICAL AXIS TURBINES
Computerized Simulation
Analysis and simulation of storm induced WECS generation changes on system operation, 8:29489 (BA:US)
Assessment of load frequency impacts caused by small wind turbines, 8:29491 (BA:US)
Dynamics
Development of methodology for horizontal-axis wind-turbine dynamic analysis. Summary report, 8:29481 (R:US)
Frequency Control
Assessment of load frequency impacts caused by small wind turbines, 8:29491 (BA:US)
Shear Properties
Wind-shear climatology for large wind-turbine generators, 8:29478 (R:US)
Storms
Analysis and simulation of storm induced WECS generation changes on system operation, 8:29489 (BA:US)
Tipvane Rotors
Aerodynamic research on tipvane wind turbines, 8:29483 (R:US)
Turbine Blades
Fatigue testing of low-cost fiberglass composite wind turbine blade materials, 8:29480 (R:US)
Turbulence
Wake structure measurements at the Mod-2 cluster test facility at Goodnoe Hills, 8:29484 (R:US)
WISCONSIN
Radioactive Waste Management
State of Wisconsin Ad Hoc committee on radioactive waste management. Final report, 8:29124 (R:US)
WNP-2 REACTOR
Washington Public Power Supply System Nuclear Project Number 2, previously known as Hanford-2 Reactor.
ATWS
Realistic assessment on anticipated transient without scram for WNP-2 nuclear plant, 8:29664 (RA:US)
WOLFRAM
See TUNGSTEN
WOMEN
Biological Radiation Effects
Chromosome aberrations in women treated by gamma-rays for breast carcinoma, 8:30484 (RA:DE)
Chromosomal Aberrations
Chromosome aberrations in women treated by gamma-rays for breast carcinoma, 8:30484 (RA:DE)
Directories
Directory of women-owned businesses in energy-related and other fields, 8:29732 (R:US)
WOOD
Flash Hydropyrolysis Process
Flash pyrolysis of biomass with reactive and non-reactive gases. Summary report, March 1982-March 1983, 8:29299 (R:US)
Pyrolysis
Flash pyrolysis of biomass with reactive and non-reactive gases. Summary report, March 1982-March 1983, 8:29299 (R:US)
Fundamental pyrolysis studies. Annual report FY 1982, 8:29326 (R:US)
WOOD ALCOHOL
See METHANOL
WOOD PRODUCTS INDUSTRY
See also PAPER INDUSTRY
Energy Demand
Forest-industries energy research, 1981. Final report, 8:29829 (R:NZ)
Process models for industry, 8:29835 (BA:US)
Mathematical Models
Process models for industry, 8:29835 (BA:US)
WOOD WASTES
Pyrolysis
Ablative pyrolysis of biomass in the entrained-flow cyclonic reactor at SERI. Annual report, 1 October 1981-30 November 1982, 8:29325 (R:US)
WORKERS
See PERSONNEL
WORKING FLUIDS
See also REFRIGERANTS
Expansion
Velocity pump reaction turbine (Patent), 8:29462 (P:US)
Thermodynamic Properties
Refrigerant mixtures for sorption heat pumps, 8:29815 (TJ:GB)
WORLD

WYOMING
Oil Fields
Isenhour unit: a unique polymer-augmented alkaline flood, 8:29033 (J:US)

X

X RADIATION
Focusing
Diffraction crystals for sagittally focusing x-rays, 8:30797 (P:US)
Monochromators
Diffraction crystals for sagittally focusing x-rays, 8:30797 (P:US)
XENON
Ion-Atom Collisions
Search for existence of D_3p, D_3^-, and HD_3^- formed in double-electron-capture collisions, 8:30645 (R:US)
XENON IONS
Energy-Level Transitions
Radiative lifetime of the 6p⁴P°sub(5/2) level in Xe II, 8:30653 (J:NL)
Hyperfine Structure
Collinear fast-beam laser spectroscopy experiment: Measurement of hyperfine structure and isotope shifts in Xe II, 8:30652 (J:NL)
Spectral Shift
Collinear fast-beam laser spectroscopy experiment: Measurement of hyperfine structure and isotope shifts in Xe II, 8:30652 (J:NL)
X-RAY EMISSION ANALYSIS
See also X-RAY FLUORESCENCE ANALYSIS
Systems background in x-ray microanalysis, 8:29999 (BA:US)
Radiation Detectors
Effect of detector geometry on AEM-based x-ray microanalysis. I. Theoretical, 8:29998 (BA:US)
X-RAY FLUORESCENCE ANALYSIS
Computer Codes
VPXRAY. Analysis of proton-induced x-ray spectra, 8:29984 (R:NZ)
VSEARC. Identify elements in x-ray spectra, 8:29985 (R:NZ)
Fluorescence Spectroscopy
Maximum power signal restoration, 8:31009 (J:US)
XYLENES
Thermodynamic Properties
Correlations for estimating critical constants, acentric factor, structure factor, and dipole moment for undefined fractions, 8:28831 (RA:US)
XYLENOLS
Thermodynamic Properties
Correlations for estimating critical constants, acentric factor, structure factor, and dipole moment for undefined fractions, 8:28831 (RA:US)

Y

YANKEE ROWE REACTOR
See ROWE YANKEE REACTOR

YEASTS
Chemical Radiation Effects
Immobilization of yeast cells with hydrophilic carrier by radiation-induced polymerization, 8:30492 (R:JP:In Japanese)
YIELD (FUSION)
See FUSION YIELD
YOLK
See EGGS
YTTERBIUM
Neutron Reactions
Fast-neutron capture-cross-section measurements with the Argonne National Laboratory large-liquid-scintillator tank, 8:30752 (RA:US)
YTTERBIUM 160
Energy Levels
Level scheme of ^{160}Yb and the predicted SU(3)-O(6) transition in the N=90 isotones, 8:30763 (J:NL)
YTTRIUM
Neutron Reactions
Fast-neutron capture-cross-section measurements with the Argonne National Laboratory large-liquid-scintillator tank, 8:30752 (RA:US)
YTTRIUM 88
Lung Clearance
Pulmonary retention of insoluble particles in man, 8:30509 (RA:US)
Retention Functions
Pulmonary retention of insoluble particles in man, 8:30509 (RA:US)
YTTRIUM ALLOYS
Electronic Structure
Electronic structure and surface oxidation of the Haucke compounds $CaNi_5$, YNi_5, $LaNi_5$ and $ThNi_5$, 8:29894 (J:CH)
Oxidation
Electronic structure and surface oxidation of the Haucke compounds $CaNi_5$, YNi_5, $LaNi_5$ and $ThNi_5$, 8:29894 (J:CH)
YTTRIUM ALUMINIUM GARNETS
See ALUMINIUM OXIDES
YUKAWA NONLOCAL THEORY
Vacuum States
Vacuum energy in the Ysub(d) Yukawa model in the strong coupling limit, 8:30713 (R:SU:In Russian)

Z

ZEA MAYS
See MAIZE
ZEOLITES
Performance Testing
Review of waste package verification tests. Semiannual report, April-September 1982, 8:29156 (R:US)
Sorptive Properties
Development of partitioning method - cold and semihot experimental works with partitioning testing apparatus, 8:29130 (R:JP:In Japanese)
ZET PINCH
See LONGITUDINAL PINCH
ZINC
Biological Effects
Inducibility of metallothionein gene expression as an indicator of DNA damage and repair proficiency in human cells, 8:30543 (RA:US)
Zinc-induced enhancement of resistance to alkylating agents, 8:30538 (RA:US)
Diffusion
Laboratory measurements of contaminant attenuation of uranium mill tailings leachates by sediments and clay liners, 8:29249 (R:US)
ZINC 65
Radioecological Concentration
Sewage sludge as a sensitive indicator for airborne radionuclides from nuclear power plants. Studies of distribution and behaviour of activation products in the terrestrial environment, 8:29621 (R:SE)
ZINC COMPLEXES
Chemical Reactions
Kinetic, magnetic and Moessbauer studies on porphyrin systems. Final report, 8:30040 (R:US)
ZINC OXIDES
Photoemission
Effects of Madelung potentials at surfaces of ZnO on photoemission spectra and work functions, 8:29979 (J:NL)
Surface Potential
Effects of Madelung potentials at surfaces of ZnO on photoemission spectra and work functions, 8:29979 (J:NL)
Work Functions
Effects of Madelung potentials at surfaces of ZnO on photoemission spectra and work functions, 8:29979 (J:NL)
ZINC SULFIDE SOLAR CELLS
Fabrication
Cadmium sulfide/copper ternary heterojunction cell research. Final report, April 1, 1980-August 25, 1982, 8:29329 (R:US)
Performance Testing
Cadmium sulfide/copper ternary heterojunction cell research. Final report, April 1, 1980-August 25, 1982, 8:29329 (R:US)
ZIRCALOY
For unspecified Zircaloy alloys.
See also ZIRCALOY 4
Creep
Effects of temperature and pressure on the in-reactor creepdown of Zircaloy fuel cladding, 8:29567 (J:US)
Physical Radiation Effects
Effects of temperature and pressure on the in-reactor creepdown of Zircaloy fuel cladding, 8:29567 (J:US)
Stress Corrosion
Chemical aspects of Iodine-induced stress corrosion cracking of Zircaloys, 8:29900 (J:US)
ZIRCALOY 4
Embrittlement
Effect of hydrogen on the oxygen embrittlement of beta-quenched Zircaloy-4 fuel cladding, 8:29698 (J:US)
Fracture Properties
Qualification of the B and W Mark B fuel assembly for high burnup. Eighth semi-annual progress report, January-June 1982, 8:29557 (R:US)
Oxidation
Comparison of the high-temperature oxidation behavior of Zircaloy-4 and pure zirconium, 8:29568 (J:US)
Qualification of the B and W Mark B fuel assembly for high burnup. Eighth semi-annual progress report, January-June 1982, 8:29557 (R:US)
Physical Radiation Effects
Effect of hydrogen on the oxygen embrittlement of beta-quenched Zircaloy-4 fuel cladding, 8:29698 (J:US)
Qualification of the B and W Mark B fuel assembly for high burnup. Eighth semi-annual progress report, January-June 1982, 8:29557 (R:US)
Swelling
Multi-rod burst test under a loss-of-coolant accident condition, (2). Experimental result of the bundle No.7806, 8:29675 (R:JP:In Japanese)
ZIRCON
Leaching
Leachability of zircon as a function of alpha dose, 8:29976 (BA:US)
Radiation Effects
Leachability of zircon as a function of alpha dose, 8:29976 (BA:US)
ZIRCONIUM
See also ZIRCONIUM-ALPHA
Neutron Reactions
Fast-neutron capture-cross-section measurements with the Argonne National Laboratory large-liquid-scintillator tank, 8:30752 (RA:US)
Oxidation
Comparison of the high-temperature oxidation behavior of Zircaloy-4 and pure zirconium, 8:29568 (J:US)

ZIRCONIUM 94 TARGET
Neutron Reactions
Neutron-capture-activation cross sections of ^{94,96}Zr and ^{98,100}Mo at thermal and 30 keV energy, 8:30751 (RA:US)
ZIRCONIUM 96 TARGET
Neutron Reactions
Neutron-capture-activation cross sections of ^{94,96}Zr and ^{98,100}Mo at thermal and 30 keV energy, 8:30751 (RA:US)
ZIRCONIUM HYDRIDES
Electronic Structure
Application of EELS to the study of metal-hydrogen systems, 8:29942 (J:US)
Neutron Reactions
Crystal analyzer TOF spectrometer (CAT) for high energy incoherent neutron scattering, 8:30786 (RA:US)
Phase Studies
Application of EELS to the study of metal-hydrogen systems, 8:29942 (J:US)
ZIRCONIUM OXIDES
See also ZIRCONOLITE
Catalytic Effects
Study of Fischer-Tropsch synthesis through the use of surface intermediate scavengers. Progress report, August 1, 1982-April 1, 1983, 8:29287 (R:US)
Crystal Growth
Cubic zirconia, the latest diamond imitation and skull melting, 8:29944 (B:US)
Crystal Structure
Neutron profile refinement of the structures of Li_2SnO_3 and Li_2ZrO_3, 8:30005 (J:US)
Hardness
Cubic zirconia, the latest diamond imitation and skull melting, 8:29944 (B:US)
Refractivity
Cubic zirconia, the latest diamond imitation and skull melting, 8:29944 (B:US)
ZIRCONIUM-ALPHA
Permeability
Gas-phase hydrogen permeation through alpha zirconium: pressure and geometry dependence, 8:29871 (RA:US)
ZIRCONOLITE
Radiation Effects
Study of radiation effects in curium-doped $Gd_2Ti_2O_7$ (pyrochlore) and $CaZrTi_2O_7$ (zironolite), 8:29939 (BA:US)
Self-Irradiation
Study of radiation effects in curium-doped $Gd_2Ti_2O_7$ (pyrochlore) and $CaZrTi_2O_7$ (zironolite), 8:29939 (BA:US)
ZT-40 DEVICES
Initial reversed-field pinch experiments on ZT-40 and recent advances in RFP theory, 8:30879 (BA:XA)
Ballooning Instability
Viscoresistive ballooning and density fluctuations in the ZT-40 device, 8:30940 (J:AT)

CONTRACT NUMBER INDEX

Numbers assigned to DOE contracts under which documents announced in this publication were prepared are included in this index.

Contract No.	*Abstract No.*	*Report No.*
AC01-76ET10348	**Curtiss-Wright Corp., Wood-Ridge, NJ (USA). Power Systems Div.**

REPORT NUMBER INDEX

The numbers assigned to all reports cited in the publication appear in the first column of the index. Cross reference information and/or availability are included as appropriate. Abbreviations used in the availability column are elaborated at the end of the index. To expedite the filling of orders for reports from NTIS and TIC, an order number in the form, DE82000001, appears in column 3. Requesters are urged to use this order number where provided. In column 4, one or more DOE distribution categories are indicated, e.g. , STD-10, MN-25. STD indicates distribution was made in full-size copy; MN indicates microcopy distribution. These category numbers are included to assist DOE librarians in responding to requests for reports in their collections. The UC (Unclassified Distribution Categories) are defined in DOE/TIC-4500, available from TIC. The citation numbers are given in column 5. NOTE: DOE attempts to disseminate its information as broadly as possible. Even though a report may contain some degree of illegibility, it is believed that the report may still make a contribution. The presence of a 1, 2, or 3 following NTIS in the availability column denotes the extent to which a report may be illegible and the form in which it is available: 1 = 1 to 5% illegibility, available PC and MF; 2 = 6 to 10% illegibility, available MF only; 3 = 11% or more illegibility, available PC only.

Abbreviations Used in Availability Column

EM Available in aperture card format only. Inquiries regarding the availability of these items should be addressed to USDOE-TIC, P.O. Box 62, Oak Ridge, Tennessee, 37830.

ETEC Available *only to requesters within the United States* from the Energy Technology Engineering Center, P.O. Box 1449, Canoga Park, California 91304.

GJO Available from DOE Grand Junction Office, P.O. Box 2567, Grand Junction, Colorado 81501.

GPO For sale by the Superintendent of Documents, Government Printing Office, Washington, D.C. 20402.

HMSO Her Majesty's Stationery Office, Atlantic House, Holborn Viaduct, London, England, EC1P 1BN.

NSO Available *only to requesters within the United States* from the Nuclear Standards Office, Oak Ridge National Laboratory, P.O. Box X, Oak Ridge, Tennessee 37830.

NTIS For sale by the National Technical Information Service (NTIS), U.S. Department of Commerce, Springfield, Virginia 22161. Price given is the domestic price for paper copy; prices for foreign purchasers are in most instances twice the domestic price.

TIC Available from the Technical Information Center, P.O. Box 62, Oak Ridge, Tennessee 37830.

NTIS NORTH AMERICAN PRICE CODES

Most NTIS products and services are now announced by price codes and, therefore, without specific prices in NTIS journals, newsletters and indexes.

The current dollar equivalent for each code is shown in the schedule below. Orders must list the accession number(s) and be accompanied by the total dollar amount from the current schedule.

NORTH AMERICAN CONTINENT PRICE SCHEDULE

Customers in Canada, United States, and Mexico please use this price schedule; other addressees, write for Folder PR-360-4.

MICROFICHE					
A01	$4.50	E01	$6.50	T01	$125.00

CODES USED ON INDEX LINES

Following the citation numbers in the Corporate Author, Personal Author, and Subject Indexes, codes are used to designate the type of document, country of publication, and language of the document, e.g., (R:SU:In Russian). The language designator does not appear if the document is published in English.

ENERGYGRAMS:® BRIEF DESCRIPTIONS OF ENERGY TECHNOLOGY

A QUARTERLY COMPILATION OF TECHNICAL NOTES PUBLISHED BY THE TECHNICAL INFORMATION CENTER, U. S. DEPARTMENT OF ENERGY.

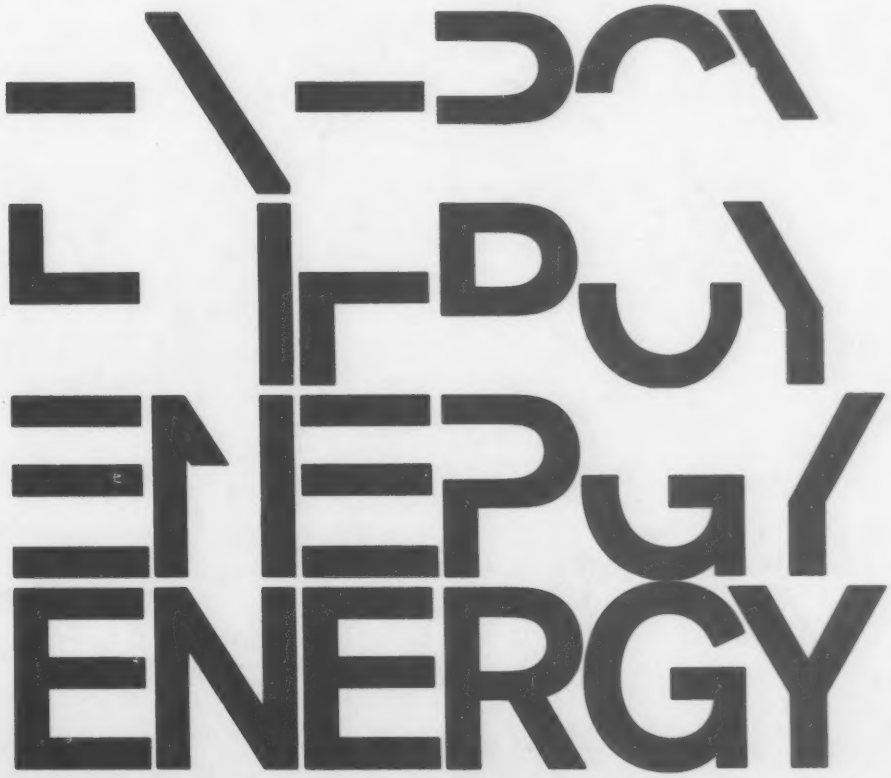
The Energygram® program was instituted by the Department of Energy (DOE), Technical Information Center, to help fulfill a mission of DOE to transfer information based on significant advances, technological developments, or synthesized knowledge generated from DOE-sponsored research to identifiable audiences in industry, business, education, private institutions, and federal, state, and local government.

Energygrams® are usually one-page illustrated bulletins describing DOE technology or data and telling how to obtain the technical reports or other material on which they are based. Each issue of the compilation will contain individual Energygrams® within the following subject categories: computers and computer science; conservation (appliances, buildings and communities, industrial, and transportation); electric power; energy conversion; energy storage; engineering; fossil energy (coal and other); instrumentation; life sciences; materials; nuclear technology; physical sciences; and renewable energy (geothermal, solar, and other). Frequently a personal contact is given who can provide program information beyond the data found in the reports. A subject index is provided in each compilation which will be cumulated with each issue by calendar year.

Material for Energygrams® is selected from a wide variety of DOE energy research and development documents that are submitted to the Technical Information Center at a rate of about 2000 documents per month for processing and distributing. Some computer software packages, patents, and patent applications are also chosen for the program.

The quarterly compilation is available on subscription as PB83-903600 for $30.00 per year from the National Technical Information Service, U. S. Department of Commerce, Springfield, VA 22161. A single issue can be purchased for $8.00. Customers outside the United States, Canada, and Mexico can obtain a year's subscription for $60.00 and a single copy for $16.00.

The introductory issue is available only as a single issue and can be ordered as DOE/TIC/EGC-81 for $7.00 in the United States, Canada, and Mexico or for $14.00 in other countries.



* U.S. G.P.O. 1983-646-052:3

AVAILABILITY OF REFERENCES ABSTRACTED

REPORTS

Most reports abstracted in this publication may be obtained from

National Technical Information Service (NTIS)
5285 Port Royal Road
Springfield, VA 22161

or

DOE Technical Information Center (TIC)
P. O. Box 62
Oak Ridge, TN 37830
ATTN: Customer Services Division

Note: DOE offices and contractors should order from TIC; all others should order from NTIS. For more specific information on ordering, please note the introductory paragraph to the Report Number Index. For assistance in obtaining reports that do not have an Order No. (DE...) or other availability indicated in the citation or Report Number Index, contact TIC.

PATENTS

Although not cataloged as reports, patents cited from each country are listed in the Report Number Index under PATENTS-AU, PATENTS-FR, PATENTS-US, etc. U. S. Patent Applications, e.g., A 293,415, are available from NTIS.

NON-REPORT DOCUMENTS

Check the citation closely for the availability of such documents as journal articles, conference papers, books, and monographs. It may be necessary to request directly from the publisher or originator or to contact local, state, or university libraries or commercial reprint services.

Dissertations are available from University Microfilms International, Dissertation Copies, P. O. Box 1764, Ann Arbor, MI. Please request by Order No., e.g., DA82-11997.

OTHER

When GPO is cited as available source, order from Superintendent of Documents, Government Printing Office, Washington, D. C. 20402.

REPORT COLLECTIONS

The libraries listed below purchase and maintain microfiche collections of DOE and foreign reports. Most of these libraries have microfiche reader-printers or other photocopy facilities with which to reproduce enlarged copies from microfiche. Charges for reproduction services vary.
